WALSH, E. H. C. Notes on the Silver Punch-marked Coins in the British Museum (<i>concluded</i>)	21
— The Image of Buddha in the Jo-wo-Khang Temple at Lhasa	535

ERRATA

JRAS., 1938, January.

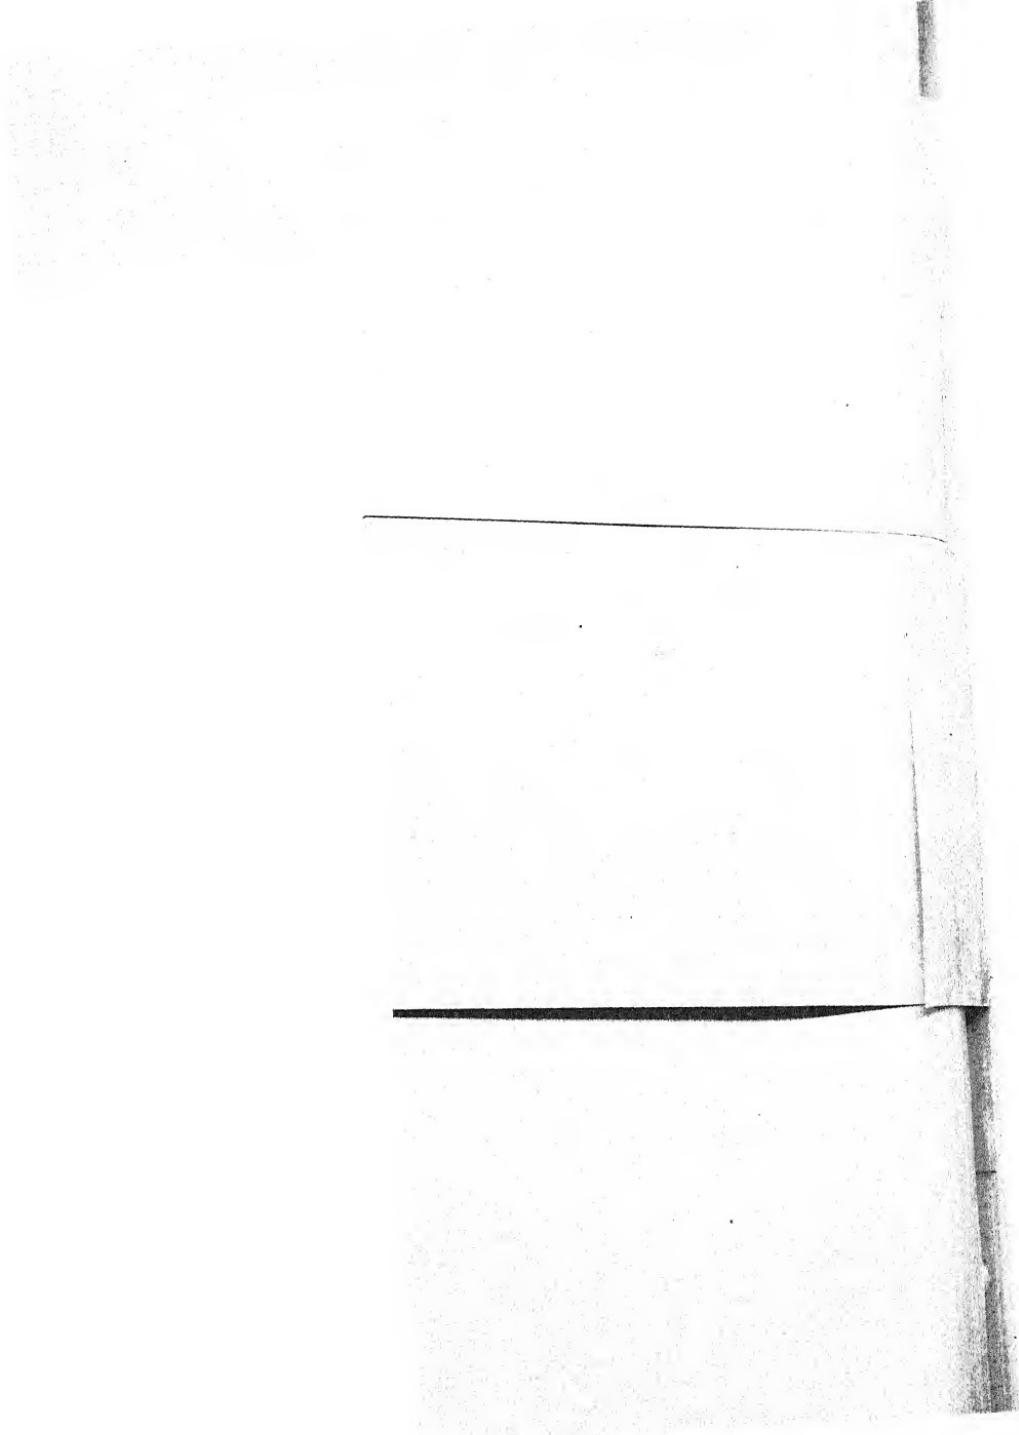

The Review of *Bhakti-bhāndāri Basavannanavaru* (A 22), which appeared on page 156 of the *JRAS.* for January, 1938, has, by a regrettable mistake of the Press, been published under the section for Islam instead of where it should have been, on p. 141 under India.

p. 84, last line. For "seventh" read "eighth".

p. 86, line 22. For "eighth" read "seventh".

ERRATUM

The reviewer of *Ancient Oriental Seals in the Collection of Mrs. Baldwin Brett*, by H. H. von der Osten, regrets having stated in error (*JRAS.*, 1938. p. 315). that no list of the categories of seals was included and that the source of the graph on p. 2 was omitted, both having been accidentally overlooked. It is very satisfactory to find the few criticisms of a most useful book thereby reduced.

JOURNAL OF THE ROYAL ASIATIC SOCIETY

1938

PART I.—JANUARY

Shafta d Pishra d Ainia

(A MANDÆAN MAGICAL TEXT

TRANSLATED AND TRANSLITERATED BY E. S. DROWER)

Marai mshaba. Bliba dakia blishania bpuma tushbihta.

THE END

TRANSLATION

I am Hibil Ziwa, the Righteous, (and I) and the 'uthris my brothers, Sons of light, with whom I came into being, we sit in the great

cloud of light. And Ruha d Qudsha¹ who heard my voice, hardened (afflicted ?) the² and I covered (hid) them, the white, purified ones, and I put on my feet (450) fair sandals. And She³ said, "I will rise and go and will smite the 'uthris, the mighty ones, the sons of light, in the eye !"

We who saw it, closed up and banned the Evil and Blind Eye, and we closed and banned the Pressed-in Eye, and the Discharging (or "scornful") Eye, and the Whitened Eye and the Dried-up Eye and the Darkened Eye and the Scornful (or "discharging") Eye.

I smite them with a great hammer of radiancy and with a great axe of exorcisms (or "rays").⁴ And I cast them into the torments of the nether world. And health shall be the (460) portion of N. son of N. by the compelling power of the mighty 'uthris, sons of light sitting in⁵ of glory. Life is victorious. These two great "gates", write on a bowl of lead, or on a roll of gazelle-skin, and place it in a case of hollow reed (bamboo ?) and offer a male lamb and a female⁶ and salt and sesame oil, and health shall accrue to the man or woman or male child or female child. Further, read upon salt, and upon fruits and grapes and trees and on sowing and on seed. Life is victorious. Tremble and be scared off, Evil Eye and Sunken (Eye) and Envious (Eye) and Scornful Eye and Deceiving (Eye) which deceives him. On land and water I adjure thee and bind thee by oath, Evil Eye and Dimmed, and Eye that is envious amongst the children of men, and the Sunken (Eye) and Wicked (Eye) and the Eye that envies babies,

¹ The Holy Spirit, a female demon in Mandæan mythology.

² *Pitrunkia* "dying ones".?

³ Here "she" is Ruha d Qudsha, i.e. "the Holy Spirit" not the Eye.

⁴ *Shiriatha* means both "rays" and "exorcisms", and is used in double sense.

⁵ A word is missing from the text. Probably *anana* "a cloud".

⁶ Or, "cast bran and bread-crumbs".

male and female, and strikes them and fells them. By Bel and Nbu and Nirig, in the names of those three lofty angels, evil and powerful ones that fetter thee, thou shalt be exorcized and depart from this body of N. son of N. Further, I have adjured thee and laid an oath upon thee, Evil Eye and Dimmed and (480) Sunken, in the name of Markiel, and Rufi'il and Gabriel the angel, so that they hate and ban the Evil Eye and the Dimmed, the Envious and Scornful (Eye), and the Eye that strikes and slays and cuts down. And thou art closed off, banned, and excommunicated, made void, and removed and expelled from the house and building and¹ of N. son of N. and from his house and dwelling, his enclosure and buildings, and from his purse and possessions, from his wife and (490) sons and daughters and from his livestock, and his bull and his cows, and from his water, land, and cultivation, and from his bread and his² thou Evil Eye and Dimmed and Sunken, in the names of all those angels, and it is a command to thee. And health shall be the portion of N. son of N. and (well-being) on his purse and possessions. Life is victorious.

Write the mystery of this command on a scroll of gazelle-skin or on a bowl of tin or lead, and all that thou askest will be relieved.

Tremble and be scared off, Evil Eye and Dimmed, from the body of N. son of N.! That the snake may bite thee and the scorpion sting thee and the centipede sting thee and the gander peck thee and the sword (or "crab") cut thee off. Tremble and be scared off from the body of N. son of N. in the name of Rufi'il, Rufi'il, Rufi'il, Rufi'il, Rufi'il, Rufi'il, who dissolves thee as salt is dissolved and diffused in water, and like snow on the mountain-sides. And health shall be upon N. son of N. Life is victorious. (510)

(A drawing of a magic figure here.)

¹ *Bihashia*? *bisashia*? Possibly miscopied *anashia*, "people," "men"?

² A hiatus in the document.

I spell the great Name and spell the Great First Word upon the Eye, daughter of Bel, and the Eye, daughter of Babylon, who weeps, pours forth lamentations, and sheds tears. And she says to her father : “ P_{th}ahil, the being who created this world and orders all the earth in perfection, gave me a portion (of the whole world) which I retain, and he gave me the ruling-
(520) power which I exercise.”

And he said to her : “ I adjure thee and lay oath upon thee, Evil Eye and Dimmed, evil Envious (Eye) which envied and struck N. son on N.! If thou didst ask a portion, who gave it to thee that thou mightest devour it ? And who gave thee the dominion which thou dost exercise that thou shouldest hew down and show wrath ? Thou didst fornicate and practise fornication, and whenever thou wentest to a place, thou didst destroy and disturb and diminish and ruin and uproot. And thou
(530) didst go forth to the markets ¹ of the earth and there met with a young boy, as he was standing, and sheltered like a fish in a pool. And thou saidest, ‘ How lovely this boy is ! ’ Thou didst strike him, and cast the boy into the lap of his mother. And thou saidest ² and didst mount and rise up by a lake, amongst the luxuriant foliage of the spring verdure, and find a palm-tree standing on the shore of the lake and saidest, ‘ How mighty a palm is this ! ’ Thou didst bend it like a bow, and its head came down till it touched the ground. And thou
(540) didst go and didst find a lote-tree ³ and this had three hundred and sixty lote-fruits on it. And thou saidest, ‘ How beautiful and mighty is this lote-tree ! ’ It languished and its lotes dried. And thou wentest and didst hap on the sea when it was full of water, and in it fish and dolphins were swimming, fishes of the Spring. The sea went dry ; the fishes
(550) and dolphins fell on the shore. And thou wentest and didst find a marsh-lagoon. This was abundant and large, and fat were the birds and fishes that were therein. The

¹ Covered-in streets of shops, shuqia.

² Miscopying : probably “ wentest ”.

³ Zizyphus Spina Christi.

marsh-pool dried up : the birds scattered and the fishes that were in it died. And thou wentest and didst find a phalanx of the king, and didst break it up and slay them. And thou didst rise and go to the herdsman of bulls. And thou saidest, ' How fine and well-grown ! ' of this herdsman, and, ' How fat are these bulls and cows that have thick pelts ! ' It (the herd) was made barren and bewitched, and it was with the herdsman as it was with the lote-tree.¹ And Bel, Nbu, and Nirig came and found thee and stabbed thee with their knives and crushed thee beneath great mountains of stone. Thou art confounded and brought to nought, Evil Eye and Dimmed that struck N. son of N. and his sons (560) and daughters and purse and possessions and bull and cows.

And they placed thee in an iron cooking-pot and cast (thee), as it were, in an oven of flaming fire, and thou didst crackle like salt in a fire. And they brought the iron anvil of a blacksmith : they split thee and threw thee away like the stone of (rock)salt ; and they rained blows on thee battering thee with a stone. They burst thee, pounded thee, scattered thee, divided thee, threw thee into an ants' nest, and pounded thee with a (570) great iron hammer and with a great axe of exorcisms. A snake shall carry thee off for his offspring, and the scorpion to his brood, and the crab to his mate—and she carried thee into a cleft with her claws—and the crane with his bill and the kite with his beak. Be torn out and depart, thou Evil Eye and diseased (Eye) from the house and body of N. son of N. and his wife and sons and daughters, and from his ox and his cows and from his cedars² and his land and his waters and from his purse and his possessions, like salt which dissolves and goes forth into water, and like dew which melteth from the grass, and (580) like the sun which slips its sheath³ and rises from beside the roofs, and like wine which escapes from the mouth of those drinking it, and like vapours from a bowl and like a

¹ Corrupt text, but the meaning is self-evident.

² This reference points to a mountainous country. There are no cedars in Southern 'Irāq or Southern Persia.

³ *D qafīfa*. The simile is that of a peeled nut.

.¹ from its¹ and like sleep from the eye of a recumbent man and like markets into little boys and girls² and like water which flows out into torrents and streams and springs. And health shall be upon N. son of N. and (on) his wife and sons and daughters and dwelling, (590) his enclosure and buildings, his animals, and his ox and his cows and his purse and his possessions and his sowing and his seed. Life is victorious. . . (*Magic Figure*) . . . Write (this) mystery on a bowl of tin and (or ?) write it on the outer door; further, bind it with a bond on whosoever is struck by the Eye (and) he shall receive health. Life is victorious over all actions. Further, in the midst of Eye-pain. Two scorpions went forth towards (600) Eye-pain (and) centipedes, and struck the Eye beneath her sorceries, and struck the Evil Eye and the Narrowed Eye and the Squeezed Eye and the Eye with Cataract and the Dried (lit. sucked-out) Eye, and the Hollow Eye and the Buried Eye and the Cut-out Eye and the Eye which stands on the mountains and the Eye which sits³ on the heights. We will level the willow⁴ to the ground and we will set up the date-palm and it shall be set on a firm stem, son of 'Seven-of-the Eyes'.⁵ Thou art entirely and utterly confounded, thou (610) Evil Eye, that struck N. son of N., in the name of the angel Marki'il, of Harbi'il, the angel of the⁶ free (?) this soul of N. son of N. from the Evil Eye, the Envious Eye and from cursing and from evil spells and from beguiling satans. Life is victorious. Bound, sealed is the Evil Eye, who weeps, wails, pours out lamentations, and says to Bel, her father⁷: 'He⁸ gave me a portion

¹ *tata mn dibn̄b*. See above, p. 601, notes 1 and 2 of previous instalment.

² Meaning obscure; possibly a line in the original missed.

³ Here *yatba* indicates the Eye itself.

⁴ See p. 602, note 4 (previous instalment).

⁵ Or "springs".

⁶ *Mizda hriba* in other exorcisms appears as a piece of armour. If *hriba* is taken with *mizda*, however, the verb is missing from the next clause. The passage is evidently faulty.

⁷ *Abu* fem. possessive.

⁸ *P̄thahil*, see p. 10.

of all,¹ and gave me power which I might exercise, and gave me the creations that he made, earth and waters.''"

And he said to her, "Is this the portion which Bel thy (620)
father gave thee, that thou didst come and didst find three
brothers standing and working, and there was no hatred,² and
there was beauty. And thou saidest, 'Why so proud ? and why
so virtuous ?' While as yet thou hadst not gone forth from
before them. And their shebbas³ fell apart and were broken,
and thou didst strike them and their heads were fevered and
they fell on their couches. And thou wentest and didst find two (630)
fair women, and saidest: 'How fair are these lovely ones and
how straight they are weaving !' While as yet thou hadst
not gone forth from them (when) their shuttle was broken and
their weft broken and their web severed and their heads
became fevered and (they) fell on their couches. And thou
didst go and didst find Bel, thy father, and saidest: 'How
beautiful is Bel, my father; his head bound with myrtle
and his thick, glossy⁴ beard is comely !' While as yet thou
hadst not gone out from his presence, his tall form became
bowed, his hand became stiff, he became confused in his
heart and head, and fell on his couch. The heavens talked of (640)
it and the earth was telling of it and the bound (spell-bound ?)
amongst the cattle (or 'streets' ?) open their mouths and tell
of it, saying, 'Take oil, and a righteous man shall approach
him and shall rub it into the body of N. son of N. and health
shall be upon the body and spirit and soul of N. son of N.
Life is victorious.

Evil Eye! I adjure thee by the name of the angel Gabriel, great captain of angels, by the name of the angel Asr'iil, by the name of Ruf'il (Raphael?), great healer of

¹ *Kul*, not *'kul* as written.

² Should read *la'it*.

³ *Shubaiun*. If I am right in translating “shebbas”, i.e. the stout bundles of reeds which act as supports to reed huts, the brothers were busy at one of the commonest tasks of the marsh district, i.e. selecting and binding together reeds. “Fell apart” *satalif*.

⁴ *ssimba* "thick and glossy". Cf. **נְסִימָה** p. 1009. Jastrow's Dictionary of the Targumim, the Talmud Babli, and Yerushalmi, Verlag Choreb.

the angels of divinity, by the name Yahu, Yahu be cast out ! Yahu Yahu Adunai Asr'iil. Yahu in Yahu, the being at whose right hand stand a thousand thousand, and at his left stand a myriad myriad ; the being who is feared ; at whose voice mountains quake and the heights tremble with fear ; (who) exorcizes wizards and renders all their rites (660) impotent—just as when his name is mentioned the lion releases the fleecy sheep and the dragon forsakes its lair. And thou also, Evil and Dimmed Eye, that art male and female, tremble, be impotent and dissolve away and depart from the body of N. son of N. and his wife and his son and his daughters, because it¹ is a pure cleanser² that a man cannot encounter. Like the radiance of Shamish³ it is, that a man cannot approach ; like the light of Sira⁴ it is, that a man cannot take away, that a person cannot reach when (670) standing before the skies ; like the girth of the earth it is, that a man cannot encompass (lit. bend) ; a mountain it is, that a man cannot cleave ; an acrid wild vine it is, from which a man cannot eat ; a bitter brook it is, from which a man cannot drink water ; a lion's den it is, into which a person cannot enter ; a seven-headed dragon it is, that a man cannot slay.

Tremble and be impotent, Evil Eye of the Many, and also (680) of all daughters of men⁵ from N. son of N. and from his wife and his sons and his daughters and his house, and from his purse and his possessions. Amen, Amen Sala, and health, sealedness and armed preparedness and the great protection of soundness shall be his, N. son of N.'s. Life is victorious (magic figure here).

Write (this) mystery on a gazelle-skin scroll and put it into the amulet-case of all who are sealed⁶ and cast it on whomsoever the Eye of the Many has struck, and Every Eye, and read

¹ "It," the name of Yahu. ² *Dmasa* should read *d masa*.

³ The sun-god. The word used for the physical sun is usually *shamsha*.

⁴ The moon-god or moon. Also called Sira. The Nestorians call the moon Sara (so pronounced).

⁵ Hiatus. ⁶ By triple immersion ? This is sometimes called *hthima*.

it over sesame oil and salt and water, and put on him ¹ oil and rub it in, (and) there shall be health for every man.

In the name of the Great Life ! Health shall be upon N. (690) son of N. and his wife and his sons and his daughters. I have adjured thee, and put thee upon thy oath, Eye, daughter of Babylon, and Eye of those who come in four semblances and are seen as eight phantoms. Thou art encircled ² and cast out and broken to atoms and art scared away from the body of N. son of N. Further, I have adjured thee and laid thee under oath, Eye of Biliaiil (Belial ?) and Zarziaiil and Simaiil. The place which thou didst visit and approach, thou didst disturb and diminish and ruin. Thou art encircled (or " cast out ") and (700) put forth and utterly confounded and scared away from the body of N. son of N. Further, I had adjured thee and put thee on oath, Eye that lusts and divorces and casts adultery on bridegrooms and brides, and the Eye of spouses arrogant about their dowries (?) ³ and that approached a youth and struck him and was the cause of bitterness and strife and quarrelling. Thou art encircled and cast out and confounded and scared away from the body of N. son of N.

Further, I adjured thee and laid thee under oath, Eye, daughter of Shamish, She who approaches all who are eating and drinking wholesomely, and strikes them and makes them (710) ill, and their inside and stomach does not accept food (i.e. "their food does not agree with them"). When She approaches plenty, then need comes, and poverty and drought. Thou art encircled and cast out and broken to atoms and scared from the body of N. son of N. Further, I have adjured thee and put thee on oath, Eye of Mark'iil the Great, who attacks fine writings and actions and despises the rabbis from the school and scatters them and cuts them down. And thou wast encircled ³ and cast out and confounded and scared (720)

¹ The afflicted person.

² *Krikit*. Here and elsewhere I take this to mean " encircled by a magic circle and so deprived of power ".

³ *anania d pirunia hafnia ?*

away from the body of N. son of N. Further, I have adjured thee and put thee on oath, Eye of Saur'il¹ which strikes blows at infant boys and girls and all daughters of men, and reaps them down and kills them, and severs them from their bodies and orders their cutting off. And thou wast circumscribed and cast out and scared away from the body of N. son of N. Further, I have adjured thee and put thee on oath, Eye of (730) Nirig, who quarrels with all the angels, and blackens and attacks them and detracts from their deeds and greatness and loveliness² and from their flight hither and thither and their power, and upsets their established steadfastness in their places. Thou art circumscribed and cast out, and cast out and confounded and scared away from the body of N. son of N. and from his wife and sons and his daughters and from his bread and his water and his sowing and his seed. Further, I have adjured thee and put thee on oath, Eye, daughter of Water ; and Eye, daughter of Fire ; and Eye, daughter of Wind. (740) Thou art encircled and scared away from the body of N. son of N. and (removed) like dung from the road and like stubble from ploughed land and like sighing³ from before a son of man, and like sleep from the eye of a sleeper, and like vapours (or " froth ") from the bowl, and like⁴ from the⁵ and like water which flows away into torrents, brooks, and springs. Further, I have adjured thee and put thee on oath, Eye of all children of men, male and female ; and the Eye of Stars and Signs of the Zodiac. Thou art circumscribed and cast out and utterly confounded and (750) scared away from the body of N. son of N. Further, I adjured thee and put thee on oath, Evil Eye and Dimmed, by Yawar

¹ The Death-Angel.

² *Bastirqun* should mean something of carded wool or hair. In another *qmaha* "*bastirqa mirmilh*" "a . . . was put upon him" (of a disembodied spirit). In the Tafsir Paghra : *asa haila d manzia d hu shamsha bastirqa d Mara d Rabutha tigris* "Myrtle is the strength of hairs which is a sun called . . . of the Lord of Greatness." *Bastirqa* here might mean the rays of the sun (or its halo), portrayed by Mandæan artists as thread-like or hair-like.

³ *Tinta (tinihta)* or, possibly, "urine."

⁴ and ⁵ See notes 1 and 2, page 601 (previous instalment).

Kbar Ziwa, the being upon whom Ruha d Qudsha¹ gazed. She restrained her passionate heart (lit. she bound her heart that raged), and was intimidated and wilted, and she adored and praised the Great Glory which is abundant and without limit,² discerning the fourth to the Light. And Seven³ it is (700) and all strength, seeing the Second and he bent the knee, he and all the works that are his. Further I have adjured thee and put thee on oath by that Strength and Radiance and Light and Glory, Brightness⁴ and Help which Yawar Ziwa⁵ gave to this world. Begone, and depart from this body of N. son of N. and from his wife and his sons and his daughters, and from his bread and his water and from his *zidqas*⁶ and *tabuthas*⁷ and health shall be on N. son of N. Life is (770) victorious.

This is the Scroll⁸ of the Exorcism of Eyes, which I copied, poor and humble, a slave who is all sin and earth on the foot of the Nasorai and dust beneath the feet of those who instilled doctrine into me,⁹ the priests and ganzibras. I am Adam son of Biham, son of Adam Yuhana, son of Mhatam Zihrun, son of Yahia, son of Zakia, and their family is Sabur. And I copied it from the face (?) of four together in one scroll, and I who copied this roll wrote it from his manuscript for myself,¹⁰ (780) who is Biham son of Rabbi Zihrun, son of Sam son of Mhatam Zihrun, son of Biham, son of Adam Yuhana, son of Yahia, son of Zihrun, son of Yahia Anush, son of the great and lofty

¹ See note 1, page 8.

² I cannot follow the meaning in this italicized passage at all. It is possibly corrupt.

³ Or, imperative "praise".

⁴ *Sauta* may also mean companionship.

⁵ Yawar Ziwa, a sun-like genius. I am doubtful if Nöldeke's translation of *Yawar* as (Persian) "aide-de-camp or assistant" is correct. The symbolism is usually that of dazzling blinding brightness.

⁶ *Zidga briksa* "the blessed pious (deed)" is one form of the ritual meal eaten for a dead person or persons.

⁷ Food eaten at a ritual meal.

⁸ *Shafta*. Also means "seven".

⁹ *Sikia*. *Nsikia* in similar context in other magic rolls.

¹⁰ Probably *Inafshai*, i.e. copied for my own benefit.

and esteemed Rabbi Mhatam, son of Bayan, son of Yuhana Shadan, son of Zakhria, son of Hibil, of the sons of Dihdaria, and the Šabur family, who copied¹ it from the scroll of Ram, son of Rabbi Shitil, son of Rabbi Sam Yuhana, son of Rabbi Yahia Adam, son of Biham Zihrun, son of Adam Yuhana, (790) son of Zid, son of Sam, son of Biham, son of Rabbi Adam Yuhana, son of Rabbi Mhatam, son of Rabbi Bakhtiar of the family 'Asakir ; the Life give them joy for ever and ever. Life is victorious.

Moreover, this scroll of the Exorcism of Eyes was set in order and completed in the name (and sign) of the Life and of the Manda d Hia, and I sealed it in the names of Hibil and Shitil and Anush—and their names be praised in the place of light !—on the fifth day of the week in the month of Mišaiia (800) Bhar (Middle Spring), in the town of 'Amarah, in the house of Parsi'a, son of Farhan, son of 'Abid, of the family Rish Draz, in the year one thousand two hundred and seventy of the Arabs. The Life joy me for ever and ever !

Life is victorious over all actions !

TRANSLATOR'S NOTE

Although the roll is obviously corrupt, I have not attempted to edit the text, but have transliterated it as it is. I compared my copy with another, and found that there were only small differences.

As for my translation I shall be grateful for any suggestion. Several passages are dubious and obscure.

Fear of the "Eye" is widespread in 'Iraq, and priestly scribes are often commissioned to copy the Pishra d Ainia. It is found in the library of most Mandæan priests.

NOTES BY PROFESSOR S. LANGDON

Line 449. *pitruria* suggests Babylonian *pīru* "redeemer", if that is the meaning of the word in Tallquist's *Maqlu*, iv, 89,

¹ Should be *ansa*.

7 *pīt-ru-u-a* "my seven redeemers". Whether the context admits this meaning in the Mandeans text I cannot say. Bab. *paṭāru* "to loosen, free from evil" is the Hebrew פָּטָר and perhaps by metathesis פָּרָט.

Bel Nbu Nirig in this text refer to Marduk (Bēl) Nebo and Nergal of the Babylonian incantations.

pishrā "exorcism" in the title is the Bab. *pīširtu* "act of freeing from a curse", from the verb *pašāru* "to undo a curse". See also פְּשָׁׁׁר in Aramaic incantations, Montgomery, *Aramaic Incantation Texts*, p. 299. See *pshar*, line 108, *pashra* "loosened", 119.

Line 1. *nukhraia*, Bab. *nakru* "stranger, foreigner".

Line 2. *asūta* "health", Bab. *asū* "physician", *asūtu* "doctoring, healing". This word is of Sumerian origin, *a-zu* "the water knower", magician, but became the technical word for "doctor", whose practice was always connected with magic. Hence a god of magic is *asū rabū* "the great healer". See *asia*, l. 101; *asia rba*, 651.

zakūta "cleanness" in this text is the Bab. *zakūtu*, already noted by Lidzbarski.

Line 9. *aina zruqtia*. The author renders "blue eye" and compares Syriac *zérākîtā* "a blue-eyed woman"; the modern Mandeans priests according to the author's note render "eye that glances to and fro". Since Mandeans incantations clearly preserve the terminology of Babylonian sorcery, it is almost certain that *zruktia* is from Bab. *zarāku* "to be cross-eyed". *énā-šu zar-ri-ka* "his eyes squint", Meissner, *AOF.*, ix, 120, 14. *zāriku* "the squint-eyed", a *nomen proprium*, *Göttingische Gelehrte Anzeigen*, 1915, 363; *AOF.*, ii, 79, n. 8.

Line 113. *zīqa* "wind", Bab. *zīku*, Aramaic *zīkā*, Montgomery, *ibid.*, 287.

Line 161. *zanai*, probably Bab. *zinū* "foe, hater".

Line 282. *pilqa*, Bab. *pilakku*, Syriac *pelkā* "axe". Uncertain in this context.

Line 679. *ubṭul*, imperative, "be impotent." This is Bab. *baṭālu*, imp. *ibṭil* "to cease". See בַּטְלָל Montgomery, *ibid.*, 283. Is the pointing *ubṭul* certain?

AUTHOR'S POSTSCRIPT

Professor Langdon is obviously right about *aina zrugtia*. As to *zanai uzamir* Dr. C. Gordon in "Aramaic and Mandaic Magical Bowls" (*Archiv Orientálné*, Vol. 9 [1937], No. 1-2 translates *zanita uzamarta*, "harlot and singer" (Text M).

303.

Notes on the Silver Punch-marked Coins in the British Museum

By E. H. C. WALSH

(Concluded from October, 1937, p. 624)

OTHER SYMBOLS

18. *The Taurine.* On p. xxxiii Mr. Allan gives a group of eighteen symbols "formed by combinations of taurine symbols. None of them are common, and most of them are characteristic of variations only". Three of these require

notice. No. 6, , No. 18, , and No. 7, , are shown the wrong way up, No. 6 in its perfect form occurs as one of the four class-marks on 147 of the Bhir Mound

coins (Class D), on many of which it is clear, as .

The vertical line in symbol 6 is the shaft of a spear, the spear-head of which is in the centre of the mark.

It is found that the taurine, when forming a component part of another figure, does not occur pointing vertically downwards, except when it is one of a whorl of taurines going round in the same direction, as in symbols 1, 10, and 13, or where two taurines face each other, as in symbols 5 and 8.

Thus, in every case where the taurine occurs in connection with an animal it will be seen that it never occurs vertically with the points downwards, except where it forms one of a whorl of taurines going round in the same direction, as in symbol 2, § 27, p. xxviii.

There appears, however, to be an exception to this rule in the case of symbol 3, where the upright object stands in a protecting rail.

The point is material, as it enables it to be determined which is the top and bottom of an otherwise indeterminate figure, in connection with which a taurine occurs.

In No. 18 the Taurines are in the usual form of a solid pellet and not a hollow ring.

19. *The Hour-glass* . This symbol, which forms a part of varieties 7 and 14 of the six-armed symbol, and occurs in connection with other marks, is described by Mr. Allan (p. xxiii) as a "dumb-bell". Its form, however, resembles an hour-glass, and, as such, it may be the *lamaru*, the Indian hand-drum, which is used in connection with certain religious services, and might therefore be regarded as having a protective or propitious significance, as in the case of the taurine. It also resembles in shape the *morha*, the common wicker-work Indian stool, or seat, which, being made of intersecting strips of split-bamboo, is hyperboloid in shape. This is also used as a stand to support a tray. It would not, however, as such, seem to be a protective or propitious object. But Mr. Ernest Mackay¹ mentions a curious pottery stand of this shape, about $2\frac{1}{2}$ feet in height, found by him at Kish, and similar to one previously found there by Professor Langdon,² who also adds a note to Mr. Mackay's article. These are ornamented by triangular incisions, as though representing intersecting reeds or bamboo-strips, and Mr. Mackay considers that they were used for ritual purposes, as a stand for offerings. If this significance was attached to this object, it might be considered to have a protective or propitious nature, and be used as such a symbol.

As Mr. Allan observes (p. xxiv), it does not represent a "reliquary", as supposed by Theobald. This supposition arose from this object occurring in the arches of the hill-mark (p. xxiv, fig. 6), the hill-mark then being considered to be a symbol of the Buddhist religion, and was described by Cunningham as a *Chaitya* (*C.A.I.*, p. 61) and by Theobald as a *Stupa*.³

¹ "A Sumerian Representation of an Indian Stand," by Ernest Mackay, *JRAS.*, 1933, pp. 335-8, pl. iv.

² *JRAS.*, 1930, pl. ix, fig. 4.

³ "Notes on some of the Symbols found on the punch-marked coins of Hindustan," by W. Theobald, *JASB.*, pp. 211-15.

20. *The Bull* (p. xxvi, § 23, fig. 5). As already noted in § 7, this mark is of general occurrence on the punch-marked coins. It almost invariably faces to the right. It occurs on 430 of the Bhiṇ Mound coins of different classes, facing to the right, and only on one coin facing to the left. The curve of the horns forward, namely to the right, enables this mark to be distinguished from the tusks of the elephant, also facing to the right, which curve upwards, namely, curve to left, when only a portion of these marks appear on the coins. As already noted in para 8, this mark may be connected with the worship of Śiva.

The bull is also shown in the Catalogue in the following form  (p. xxvi, § 23, fig. 3), with the horns crescent-shaped, on 7 coins, namely, on Coin 83, p. 40, Class 2, IV, var. *v*, and on Coins 12 to 17, p. 44, Class 2, VI, vars. *d* to *h*, the mark of the bull is shown with the horns not curving forward, but of crescent shape. Two of these coins are illustrated, viz. Coin 83, p. 40, on Pl. XLII, 6, and Coin 17 on p. 44, on Pl. VI, 25. On both these coins the marks are very confused, but in each case the mark attributed does not appear to be the bull. The point is material, as the horns of the bull invariably curve forward, namely, curve towards the right, which distinguishes them from the tusks of the elephant, which curve upwards, viz. curve towards the left. This difference would appear to be intentional; as, where only a portion of the mark appears on the coin, which is frequently the case, the only means of knowing whether the coin bears the bull-mark or the elephant-mark, is the direction of the curve of the horns or tusks. If, as the writer considers is probable, the elephant was the mark of the king's coinage, as distinguished from the coinage of other authorized coining authorities, bearing the same group of the other four marks, and therefore the coinage of the same area, the point is important. Perhaps this mark with the horns crescent-shaped may be clearer on some of the above coins which are not illustrated.

21. *The Elephant* (p. xxvi, § 22, fig. 2). This is the usual form of this mark, which has been already referred to, with the trunk hanging down and the two tusks distinctly shown. The Catalogue also shows another form of this mark as (p. xxvi, § 22, fig. 1), with the trunk raised and one tusk downwards, as occurring on one group of 71 coins (Class 1, Group I) (lix, § 62, and pp. 11-16). Eleven of these coins are illustrated. Their examination, as noted below, does not support this figure, which would be the only occurrence of this form on punch-marked coins, though it occurs on the Tribal coins and on later cast coins.

(1) Coin 1, p. 11, Pl. II, 1. Only a portion of the mark shows, at the bottom left-hand corner of the coin. It is very crude and resembles the form on Coin 25, but the down-hanging trunk is distinct.

(2) Coin 10, p. 11, Pl. II, 2. The mark shows upside down at the bottom right-hand side of the coin. The two tusks and the trunk hanging down are distinct.

(3) Coin 18, p. 12, Pl. II, 3. The mark is not complete, the hind quarters do not show, but the two tusks, which are short, show distinctly projecting from the down-hanging trunk.

(4) Coin 23, p. 12, Pl. II, 4. The mark is upside down at the top right-hand corner of the coin ; it is not complete ; only the head and the upper part of the foreleg show, but the two very up-curved tusks and the down-hanging trunk are very distinct.

(5) Coin 25, p. 12, Pl. II, 5. The mark is not complete, only the head and the foreleg show, but it is very distinct ; the two up-curved tusks, and down-hanging trunk, and the knob-shaped foot on the leg clearly distinguish the trunk from a leg.

(6) Coin 36, p. 13, Pl. II, 7. The mark which shows at the top right-hand side of the coin is not complete ; only the head and two fore-legs show. The mark is unusually crude, but the two tusks projecting from the down-hanging trunk are very clear.

(7) Coin 44, p. 14, Pl. II, 8. The mark shows at the top left side of the coin. It is even more crude than the last. Only the head and foreleg show, but the two tusks and down-hanging trunk are distinct.

(8) Coin 59, p. 15, Pl. II, 6. The mark is incomplete, but three legs show. The two tusks and down-hanging trunk are distinct.

(9) Coin 60, p. 15, Pl. II, 9. The mark is incomplete. It is unusually crude, but the two tusks and down-hanging trunk are distinct.

(10) Coin 69, p. 16, Pl. XLI, 1. The complete mark appears on the coin. The four legs show together with the down-hanging trunk. The mark is unusually crude and bears a similar resemblance to an elephant, as the Berkshire Downs' "White Horse" to a horse.

(11) Coin 70, p. 16, Pl. II, 10. The mark is incomplete, but shows the two tusks and down-hanging trunk.

22. "*Hare with Leveret in its Mouth*" [?]. This mark is shown as  (p. xxvii, § 24, fig. 1), which Mr. Allan notes "might conveniently be described as a dog seizing a young hare or rabbit; in its clearest form it is certainly an animal of the dog type seizing a young animal, but it is perhaps too much to identify them (Nos. 1 and 2) definitely. It is Theobald's No. 44, fig. 27 (*JASB.*, 1894, p. 221), and Mr. Walsh's No. 45 on pl. iv of the Gorho Ghat find".

The examination of this mark on the coins which are illustrated, however, suggests the resemblance to the conventional form of the hare, with the tail shorter than shown above, and curling up over the back in the usual manner. Hence it may, rather, represent a hare carrying its leveret in its mouth.

A similar mark,  (p. xxvii, § 24, fig. 2), shows an animal with its tail down which suggests an animal different from a hare. This mark occurs on Coins 49-53 on p. 50 (Class 2, Group VII, var. *j*), Coins 57 and 58 on p. 51 (var. *l*), and Coin 1 on p. 52 (Group VIII, var. *a*). Three of these

coins are illustrated : Coin 50 on Pl. II, 21, the mark is the "hare with leveret", as in the preceding Coin 48, the hind-quarters do not show ; Coin 52, Pl. XLII, 21, the mark only partly shows, but it appears to be the same, with a small object, perhaps a taurine, underneath ; Coin 1 on p. 52, pl. x, 13, this also is the "hare with leveret" mark, the tail curves up in a circular form. This same mark is shown, with [?], on Coin 26 on p. 27, which is illustrated on Pl. V, 15, and *CAI.*, Pl. I, 11. The head of the animal does not show on that coin, but the tail, curving up above the back, is distinctly shown, and shows this animal to be the hare.

The mark of the "hare with leveret" occurs on 21 of the Bhîr Mound coins (Class B (e)) and its presence on the British Museum's later type of coins shows the continuance of this mark.

23. *Hare on a Hill* (p. xxv, § 21, fig. 11) is a locality mark. Mr. Allan describes the animal as "a dog (it may well be a jackal)". The animal is certainly the hare, as shown by the high quarters and longer hind-legs, the "scut" tail curving up over the back, and the long pointed ears. It could not be a jackal, as the tail of that animal is always down, like the brush of a fox. It is the same animal as that in variety 3 of the six-armed symbol (p. xxiii), already referred to in para. 15. In that mark, too, as shown by the two coins on which the animal appears, the hind-leg curves forward under the body, and not as shown in that symbol.

Class 6, Group III (pp. 66-72), 49 coins ; and Group IV (pp. 73-5), 17 coins, all bear this hare-hill locality-mark. There are 485 coins (Class A) which bear this mark among the Bhîr Mound coins. And 65 coins (Class B) bear the mark of the hare-with-taurines, which would appear to be connected with the above mark, making a total of 550 coins. The latter class correspond to Group V (pp. 76-8) of the British Museum coins, of which 17 coins bear this mark. Coins 18 and 19 of this group on p. 78, which do not bear

this mark, should form a separate group. From the large number of the coins of these two classes, far exceeding that of any other class of the Bhir Mound coins, it would appear probable that those were the current coins of that locality at the time of the deposit in the hoard, namely about 317 B.C.

This mark only occurs on the punch-marked coins. It is also shown in the Catalogue as occurring on one of the single-die inscribed Tribal coins, classed as uncertain, Coin 1 on p. 279 and Pl. XLV, 9 (*Agodaka[-]napadasa*), with reference to which Mr. Allan notes (§ 185, p. cliii) that "a closer examination shows that the animal is not a dog but a lion". The coin on the plate, however, appears to show that it is not an animal on the top of the hill-mark, but some other object.

24. *Bull on a Hill*  . This mark, as already mentioned

in para. 6, does not appear in the Catalogue, nor does it appear in its complete form on any of the coins, but comparison with the Bhir Mound coins shows that this mark occurs on thirteen coins, namely Coin 20 on p. 63 (Class 6, Group I, var. *f*), and the twelve coins of Group II on pp. 64 and 65. Four of these coins are illustrated. On Coin 20, p. 63 (PL. VIII, 4) the top of the two arches of the hill, show on the edge of the coin under the bull. The bull on this coin is shown in the Catalogue as the rhinoceros, but this is a mistake. In the other coins illustrated (Pl. X, 19 ; Pl. VIII, 22 ; and Pl. VIII, 23) only a portion of the mark appears on the coins. The hill portion which is shown in the Catalogue (p. 64) as complete with an apex, is not so on the coins, as will be seen on Pl. X, 19, where there is the bottom of a straight-lined object across the top, which is the feet of the bull. There are 101 of the Bhir Mound coins (Class C) which have the bull-hill as their locality-mark ; on several of which it is clear and complete, although, owing to its large size, there are fewer examples which appear complete on the coin than in the case of smaller marks.

Thus Coins 3 and 4, var. *c*, on p. 64 are the same variety as Coins 7 to 12, var. *e*, on p. 65; the hill portion of the mark appears on the former and the bull portion on the latter. It will also be seen that the crescent-hill mark which occurs on the reverse of one coin of var. *c*, also occurs on the reverse of two coins of var. *e*. That mark is referred to later on in para 30. Similarly, Coin 2, var. *b*, is the same variety as Coins 5 and 6, var. *d*.

25.  and  (Symbols 1 and 2, p. xxxiv). This mark has been called the "Caduceus" and "The Cotton-bale Mark". It does not, however, appear to be the Caduceus, as in that case the heads of the two snakes would be expected to be indicated. The "Cotton-bale" is merely descriptive of its shape when the circles are joining, but does not apply when they are separated, though the latter may be merely a debased form of the former. But in any case, there is no reason to suppose it to be a bale of cotton, as is shown by the line running through it. Mr. Durgā Prasād¹ considers it to be the Caduceus and writes (*op. cit.*, p. 51): "On the Nāgapāñchami day in August when the serpent is worshipped similar figures are drawn on paper and sold for worship."

A similar figure of three superimposed circles, but without the line through them, occurs on the Mohenjo-Daro seals.² It is better to give it a merely descriptive name, as "Three circles with intersecting Line".

26.  (p. xxxiii, § 33, fig. 3). This hill-mark occurs on three coins, Coins 21, 22, and 23, on p. 63 (Class 6, Group I, var. *g*). These coins are the same as 17 coins, Class J, of the Bhiṁ Mound coins, on which the object on the top of the hill is a vertical taurine. Coin 23 is illustrated (Pl. VIII, 21), on which the top portion of this mark appears and will be seen to terminate in a taurine, as in the Bhiṁ-Mound coins.

¹ *JASB.*, 1934, Numismatic Supplement XLV.

² *Mohenjo-Daro—Sign List of the Indus Script No. 243, vol. ii, p. 449; and vol. iii, List No. clxxxii, Seal No. 252.*

27.  (p. xxxiii, § 33, fig. 1) occurs on the older coins.

The significance of this mark is obscure. Theobald (No. 56, pl. ix, 118) describes it as "Food Receptacle for Birds" and considers it to be a begging-bowl put up on a platform on a pole; an improbable suggestion. Mr. Durgā Prasād¹ thinks it "looks like a *Sūla Mudgara*, a club with forks, a heavy offensive arm of the early days", but he also describes the same mark later (fig. 99) as "undoubtedly a flagstaff of the early days". It appears to be a standard, from the long pole on which it stands. It also occurs without the taurines (p. xxxviii, fig. 10) on the later coins (Classes 1 to 4), on both the obverse and reverse, and with two taurines only, on the reverse of one coin, No. 29 on p. 27.

28.  This mark is shown on Coin 13 on p. 77 Class 6, Group V, var. *d*, and on Coin 12, on p. 80, Group VI var. *f*, as being one of the five marks on the coin. But Mr. Allan notes (p. lxvii) that it is a countermark on this, as on all the other coins on which it appears. This mark (Mark No. 52) occurs on 17 of the Bhiṁ Mound coins, of nine different classes, always as a sixth mark, and punched along the edge of the coin. It is possible that it may be a mark to authorize the subsequent circulation of those coins in a particular area.

29.  (p. xxix, § 28, fig. 4, pl. vii, 13). Mr. Allan describes this object as a snake. It occurs on 7 coins, namely on Coins 2, 5, and 6 on p. 64, which have been already noticed in § 23. They are not illustrated, but this mark is clear on the Bhiṁ Mound coins with which those coins correspond, and is ; it is merely a waved object of the same thickness throughout, with square ends. It also occurs on 2 coins, 38 and 39, on p. 71; Coin 39 is illustrated (pl. vii, 13), on which it will be seen that the object is waved, as above, and has no head. It also occurs on Coins 48 and 49 on p. 72, which are not illustrated, but these

¹ "Classification and Significance of the Symbols on the Silver Punch-marked Coins of Ancient India" by Durgā Prasād, *JASB.*, 1934, Numismatic Supplement, xlvi, p. 50, fig. 98.

coins correspond to Class J, 2, of the Bhir Mound coins, on which the form is also as shown above. This mark also occurs on a single Bhir Mound coin in an angular form , which would appear to show that it is not intended for a snake.

30. *Hill with a Crescent on the Top*  (p. xxiv, figs. 1

and 2). This mark, which is very common on the later class of coins, both on the obverse and reverse, is shown on the reverse of 13 of the older coins (Class 6, pp. 61-82). On all but 4 of them it is noted that there are several other punches on the reverse of the coins. Four of the coins are illustrated. Of these, Coin 39, p. 71 (Pl. VII, 13), on which this mark is shown, does not bear this mark; it bears two decipherable old reverse-marks and traces of four others worn level to the coin. In the case of 3 of the coins (Coin 4, p. 64, Coin 8, p. 65, and Coin 36, p. 70) it has been stamped on the blank reverse of the earlier coin.

Mr. Jayaswal,¹ from the examination of a great number of cast and die-struck coins, has come to the conclusion that this mark which is a characteristic mark on the coins of the Mauryan Empire was adopted by Chandra Gupta [*chandra* = "moon"] as his name-mark, and was continued by his successors in the Mauryan dynasty, and later.

This mark does not occur on either the observe or reverse of any of the larger Bhir Mound find of 1,059 coins, nor on Golakhpur coins, nor on the 1,014 Paila coins, all of which are prior to the Mauryan Empire. It therefore appears that this mark has, in the case of each of the present coins referred to, been subsequently punched on the reverse of an old coin, which, as shown by the number of old marks on the reverse, had already been long in circulation, and would appear to be with the object of authorizing its subsequent circulation at that later time.

¹ "Early signed coins of India," by K. P. Jayaswal, *JBORS.*, 1934, pp. 279-308.

Similarly, on four other of these coins (Coin 19, p. 68; Coin 32, p. 70; Coin 3, p. 76; and Coin 1, p. 82) certain other marks which occur only on the reverse of the later coins, have been subsequently punched on the reverses already containing several of their older marks. These would be stamped on with the same object. Two of these coins are illustrated : Coin 32, p. 70 (Pl. X, 15) and Coin 1, p. 82 (Pl. X, 16); in each case they bear several older much worn marks, already on the coin.

The hill-crescent mark also occurs as a larger hill consisting of six arches, on the obverse of 6 of the later coins, Class 2, Group V, var. *a*, p. 41.

31. Similarly, the mark of a hill with a peacock, *mayūra*, which occurs both on the obverse and reverse of the later class of coins, would appear to be a distinguishing mark of the Mauryan Empire.

32. The fifth mark [?] on Coin 16 on p. 81 (Class 6, Group VI, var. *j*) is an elephant-goad, *ankuśa*, with a small object on either side and a taurine below, in an oval-enclosure,

as is shown clearly on a corresponding coin (Class Q, 6)

of the Bhir Mound coins. The coin is illustrated (Pl. IX, 20), the upper part of the mark will be seen on the right-hand edge of the coin, the taurine being off the coin.

NOTES ON THE CLASSIFICATION

33. Coin 3, p. 52 (Class 2, Group VIII, var. *c*) bears the mark of a hill with a tank-enclosure containing two "beetles" below it and an "hour-glass" above it,

The coin is illustrated (Pl. XLII, 22), from which it will be seen that the six-armed symbol is variety 6, and not variety 1, as shown in the Catalogue. The same hill-mark occurs in Coins 4-6, p. 54 (var. *d*), on which the six-armed symbol is shown as variety 7, with an "hour-glass" in place of a taurine in the ovals. That variety of the symbol also occurs

on 2 of the 149 coins of the Bhir Mound coins which bear this Beetle-Tank-Hill locality-mark. On Coin 4 (var. *d*, Pl. II, 20) the hill-crescent mark, and also another mark, which appears to be a debased form of the Taxila mark, have been stamped on a blank reverse. On Coin 7 (var. *e*, Pl. II, 12), the reverse already bore three reverse marks, two of which are nearly worn out, and are evidently much older, and the coin had therefore been long in circulation before the hill-crescent mark was stamped on it. On Coin 8, pl. xlii, 23, the reverse is noted "Uncertain stamps, including three figures, perhaps [the Three-figures mark]". The reverse on the plate does not, however, show any indication of that mark. There are five marks on the coin, two of which can be deciphered, the other three being almost entirely worn off, but from their outline are none of them the three-figures mark. One mark is three balls; the portion showing of the other mark resembles a row of taurines. The three-figures mark does not, therefore, occur. On Coin 9, pl. xlii, 24, the reverse of which is noted as "uncertain stamps", there are traces of six very worn marks. On the 2 coins, 4 and 7, therefore, on which the hill-crescent mark appears, it was subsequently stamped on already old coins of previous circulation, probably to authorize their current circulation at that later time.

The fourth mark on the obverse of these coins (vars. *c*, *d*, *e*), as already noted in para 17, should be shown the other way up; the line projecting at the top is the shaft of a spear. This mark occurs on all the 144 of this class of the Bhir Mound coins.

34. Coin 7, on p. 59. As noted by Mr. Allan (p. lxiv, § 70), this coin is of a distinct class from any of the other coins in the British Museum. It is of the same class as the hoard of 1,014 coins found in 1912 at Paila in the United Provinces. Those coins have been referred to in a previous article.¹

35. Class 6, Group I, vars. *a-d*, 18 coins (pp. 60-2)

¹ *JRAS.*, 1937, p. 300.

bear the distinguishing locality-mark of a tank with an island in the centre, with a circular object on it (p. xxix, § 29, fig. 4). The rhinoceros occurs on coins which bear this mark. The rhinoceros is shown on two other coins which do not bear the above mark, namely Coin 19, on p. 62, and Coin 20, on p. 63. The latter coin is illustrated, pl. viii, 4, and the animal is the bull, not a rhinoceros. It is probable that the animal on Coin 19 is also the bull, and these two coins, as also Coins 21 to 23 on p. 63, therefore form another group. In the Bhîr Mound coins there are 53 coins of the Island-Tank area (Class M), all of which bear the rhinoceros, which mark does not appear on any other coins.

The coins bearing the rhinoceros appear to be very old coins, as that mark appears very clearly on two very old coins and on the older face on one of the double-obverse restamped coins of the Bhîr Mound find.

36. Coins 48 and 49 on p. 72 are shown as variety *k* of Group III, the hare-hill mark. They do not contain that mark and, consequently, do not belong to that group. They bear the same group of four marks as Coins 1 and 2 on p. 59, and therefore belong to Class 5 and form variety *c* of that class.

37. Coins 18 and 19 on p. 78, which do not bear the hare-hill mark, should be transferred from Class 6, Group V, and form a separate group.

38. Class 6, Group VI (pp. 79-81), 13 coins, bear the locality-mark of a hill-with-a-tree-on-it. There are 27 coins of this class (Class L) amongst the Bhîr Mound coins. Coins 15 and 16 on p. 81 (varieties *i* and *j*), do not bear this mark and, therefore, form a separate group.

39. Class 6, Group VII (pp. 82-3), 7 coins. Of these, 5 coins (Nos. 1, 2, 3, 5, 6) bear the locality-mark of an undesignated hill. There are 12 coins bearing this mark (Class I) amongst the Bhîr Mound coins. Coin 4 on p. 82

(var. *d*), and Coin 7 on p. 83 (var. *f*), which do not bear this mark, therefore, form a separate group.

40. Coin 2 on p. 83 (Pl. IX, 19) bears six marks. One of the marks must, therefore, be a counter-mark. This would appear to be the mark shown as the fourth mark in the Catalogue. It is on the edge of the coin, overstamps the hill-mark, and is less deep into the coin than the other marks. As in the case of all coins on which the six-armed symbol contains the fish, this is a very old coin, as it bears eleven marks on the reverse, all of them very worn, several almost worn off.

CORRIGENDA

41. In addition to the Corrigenda (pp. clxiv-v) the following have been noticed :—

In the following cases the reference to the coin on the plate is given against two separate coins in the Catalogue : p. 42, no. 14. The reference to Pl. IV, 19, should be deleted ;

that coin is p. 40, no. 74, against which it is correctly given. p. 42, no. 15. The reference to Pl. IV, 18, should be deleted ;

that coin is p. 48, no. 29, against which it is correctly given.

p. 42, no. 16. The reference to Pl. IV, 13, to be deleted ; that coin is p. 25, no. 7, against which it is correctly given.

p. 46, no. 13. The reference to Pl. XLII, 12, should be deleted ; that coin is p. 45, no. 6, against which it is correctly given.

The references to the following coins on the plates are not found in the Catalogue : Pl. I, 6 ; Pl. I, 14 ; Pl. II, 19 ; and pl. iv, 21.

p. 82, no. 2. The reference to *CAI.*, Pl. I, 13, should be deleted ; Cunningham's coin is no. 5 on p. 83.

p. 83, no. 5. Reference to *CAI.*, Pl. I, 13, should be given, as noted above.

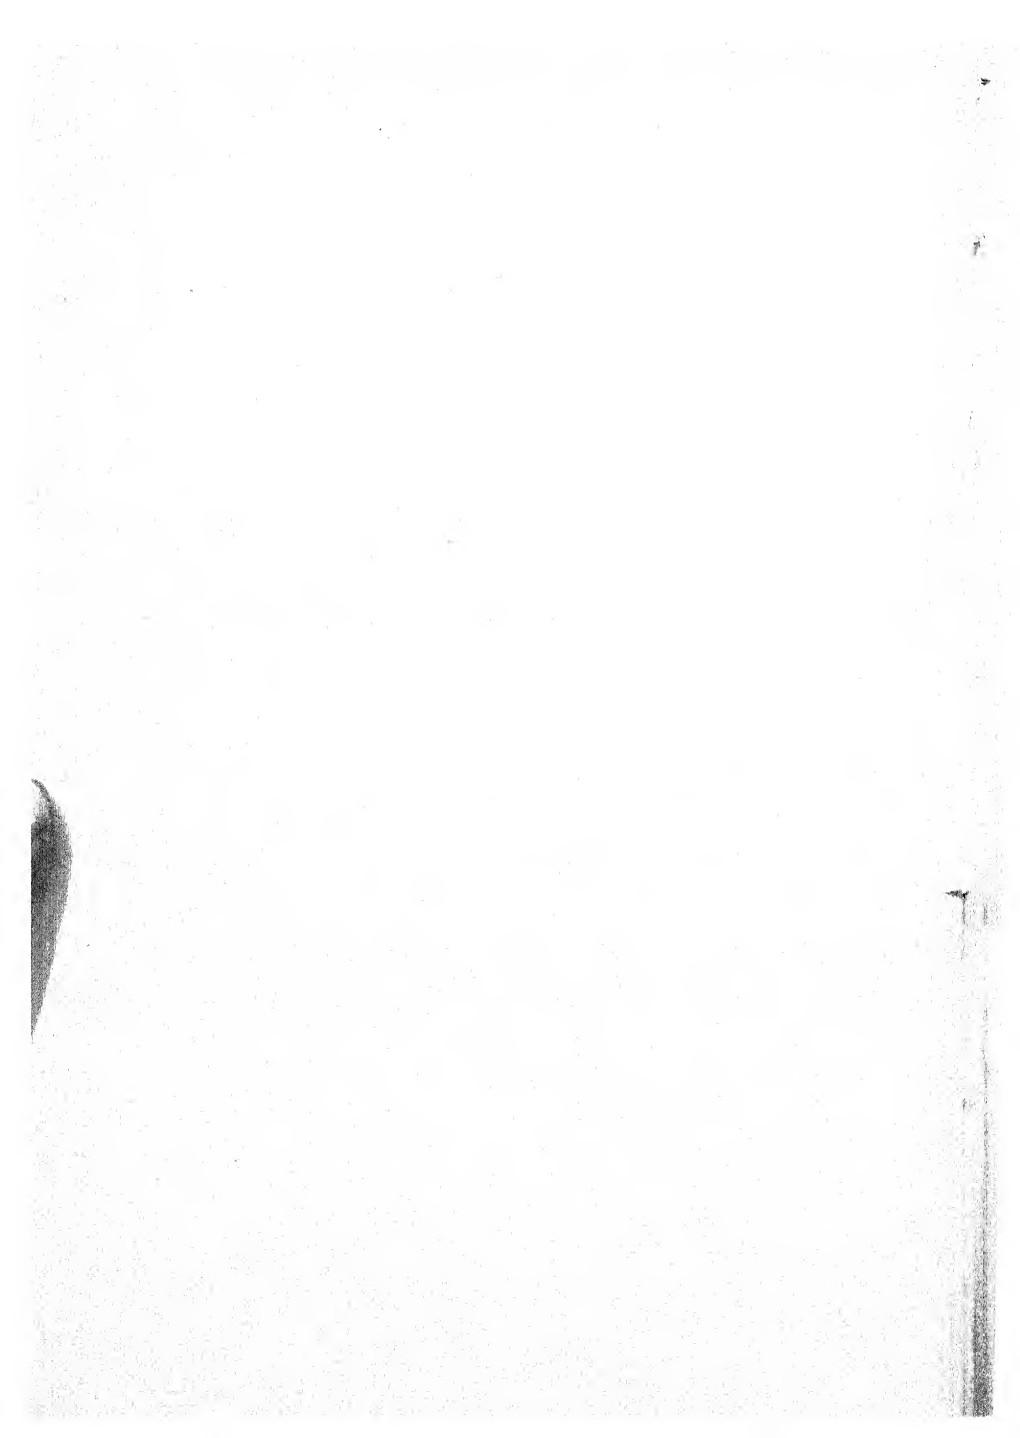

p. 83, no. 6. The reference to *CAI.*, Pl. I, 8, should be deleted and should be given under Coin 7 on that page.

There is no reference in the Catalogue of the punch-marked coins to the following coins on the plates : Pl. I, 6 ; Pl. I, 14 ; Pl. II, 19 ; Pl. IV, 21 ; Pl. V, 2 and 3 ; Pl. VI, 13, 16, 18, 19, and 24 ; Pl. VII, 4 and 14 ; and Pl. IX, 2.

42. The writer found it necessary, for the purpose of these notes, to prepare a table giving the reference of each coin on the plates to the corresponding entry in the Catalogue. It would facilitate reference if such a table were inserted in the Catalogue.

43. Mr. Allan has earned the congratulations and grateful thanks of all numismatists for his able and scholarly *Catalogue of the Coins of Ancient India in the British Museum*.

361.

The "Graces" in Semitic Folklore

A Wedding-song from Ras Shamra

BY THEODOR HERZL GASTER

INTRODUCTION

1. **T**HE ancient Semitic poem here presented is inscribed in alphabetical cuneiform upon a clay tablet unearthed in 1933 at Ras esh-Shamrah (ancient Ugarit) on the north coast of Syria. The tablet dates approximately from the fifteenth–fourteenth century B.C. The text was first edited by M. Charles Virolleaud in the periodical *Syria*, xvii (1936), pp. 209–228, but the present interpretation differs *toto caelo* from that proposed in the *editio princeps*.

As here construed, the poem is a wedding-song the contents of which may be summarized as follows:—

(i) *Proemium*, declaring that the composition is addressed to the deities Nikkal and H-r-h-b “who reigns o'er the summer crops”, and that it is to be recited at a time when “the moon appears at the sinking of the sun”. (Lines 1–4.)

(ii) *A threefold invocation* to certain goddesses called “the Graces (K-š-r-t), the Daughters of the New Moon (H-l-l), the Swallows”, beseeching them to bless the future offspring of an unnamed woman, and to bestow prosperity upon its father and kinsfolk. (Lines 5–15.)

(iii) *A mythological interlude*, describing how the Moon-god Y-r-h wooed and won the goddess Nikkal. The regular procedure of an engagement is described. The suitor sent the god H-r-h-b to the girl's father with an offer of silver, gold, and precious stones, etc., as bride-price.

This mythological passage constitutes the core of the poem. It is introduced as a compliment to the real bride and bridegroom in whose honour the present song was sung, and is inspired by the fact that the marriage ceremonies in fact took place at sunset, beneath the beneficent gaze of the Moon-god Y-r-h himself. (Lines 16–39.)

(iv) *Closing lines*; beseeching the Graces, by virtue of their proverbial kindness, to look with favour upon the marriage, the bride-price having now been duly paid. (Lines 40-52.)

2. The first clue¹ to the correct interpretation of the poem was discovered by Gordon who showed, in *BASOR.*, No. 65, pp. 29-33, that it contained several technical terms relating to marriage, and that it actually described the betrothal of the moon-god Y-r-h and the goddess Nikkal. Gordon thereupon concluded that the whole poem was concerned with this sacred marriage of the gods. Herein, however, he missed the point, for the truth is that this mythological interlude is but introduced, by way of graceful compliment, into a marriage-ode really recited in connection with a nuptial ceremony. Indeed, the name of the bride (P-r-b-h-s) is actually given at the end of the poem.

In order to understand the poem completely, it is necessary to read it in connection with a passage which occurs in the recently published legend of Danel (strictly, the Myth of Aqhat) from Ras Shamra. In that poem, after the hero Danel has duly celebrated the week of his wedding and been assured that a son would indeed be born to him, he repairs to the sanctuary of certain goddesses called "K-š-r-t (Graces), Daughters of the New Moon (H-l-l), the Swallows", and offers them food and drink for seven days. The passage (II Danel, ii, 25-43) is so important in the present connection that it must be given here in full:—

"Then entered he the House of Chirping,
Which is the temple of the K-š-r-t,
Daughters of the New Moon, swallows.
Yea, forthwith did Danel the Rephaite,
Even Ġazzar, the H-r-n-m-ite,
Slaughter an ox unto the K-š-r-t.
"He gave the K-š-r-t to eat,

¹ Another interpretation was given by R. Dussaud in his work *Les Découvertes de Ras Shamra et l'Ancien Testament*, pp. 81-5, but this is now rendered antiquated by Gordon's discovery.

And the Daughters of the New Moon to drink.
 Behold, for one day and two,
 He gave the K-š-r-t to eat,
 And the Daughters of the New Moon to drink ;
 For three days and four,
 He gave the K-š-r-t to eat,
 And the Daughters of the New Moon to drink ;
 For five days and six,

He gave the K-š-r-t to eat,
 And the Daughters of the New Moon to drink ;
 Verily, throughout seven days,
 He gave the K-š-r-t to eat,
 And the Daughters of the New Moon to drink !

" Then did he proceed within the House of Chirping,
 Which is the temple of the K-š-r-t,
 Daughters of the New Moon, swallows,
 (Saying unto them) :
 ' O ye that take cognizance
 Of the charm of the marriage-bed of princes,
 Even the charm of the marriage-bed of princes ! '

" Then did Danel return home,
 And proceeded to count his months."

From this passage it is apparent that the K-š-r-t are patronesses of wedlock and childbirth. It is therefore eminently natural that they should be invoked to bless a new union.

3. Now, who are the K-š-r-t ? A clear answer is afforded, in our opinion, by comparative mythology.

Firstly, the name K-š-r-t itself connects with the well-known Semitic root, Assyrian *kešēru*, Hebrew כְּשֵׁר, the primary meaning of which is "to benefit, render blissful, put into proper order", crossed with the Arabic *k-t-r* "be rich, plentiful".¹ Hence, the K-š-r-t may be regarded as a

¹ In view of the spelling *k-š-r* = كُشْر, rather than *k-š-r* = Heb. כְּשֵׁר

Semitic form of the familiar Classical *Charites* or "Graces", by which term the name is, indeed, rendered in the following translation of the poem.

Secondly and more importantly, when the true character of the *Charites* is examined scientifically, it will be found to accord completely with that of the K-š-r-t in our texts from Ras Shamra! The *Charites* were regarded pre-eminently as the patronesses of wedlock and childbirth. It was customary to sacrifice to them on the occasion of marriage (v. *Elym. Magn.*, s.v. γαμήλια). Euripides (*Hippol.* 1147) actually describes them as συζυγίαι "spirits of wedlock", and on a cameo described by Helbig, *Führer durch die Sammlungen klassischer Altertümer in Rom*, 1577, the Charites are represented as accompanying a bridal pair. According to Arrian, *Cyn.*, 35, 2, lovers sacrificed to the Charites. Further, the Charites were regarded especially as patronesses of childbirth. In Aegina, for instance, the two Charites Damia and Auxesia (mark the name from √*aνξ- "grow"!) were esteemed as birth-goddesses, whilst in Sparta, according to Pausanias, iii, 14, 6, their temple stood beside that of Eileithyia, goddess of childbirth. Moreover, it was customary to render thanks to them on occasions of domestic bliss (Gruppe, *Griechische Mythologie*, 1079, n. 15). Thus, both in name and in function, the Charites agree completely with the K-š-r-t.

Nor is this all. The K-š-r-t are here described as "Daughters of the New Moon (H-l-l; cf. Arabic هلال). Now, it is well known that the moon, in all mythologies, is regarded as especially propitious to childbirth, most birth-goddesses possessing also a lunar aspect. The Charites are indeed associated with such goddesses, e.g. Artemis and Leto. Their association with the New Moon, and their juxtaposition in our text with the lunar deities Nikkal and Y-r-h is thus paralleled in classical mythology.

Lastly, there is the fact that the K-š-r-t are called "the swallows" סננות ; cf. As. *sinuntu* and Neo-Hebrew סְנִינִית.

etc.). This again is explicable in the light of comparative mythology. The swallow, by virtue of its own nature and habits, is ever associated with domesticity, and is further associated with goddesses of fertility and childbirth, e.g. Ishtar (*KAT.*, ed. 3, p. 431, n. 3), Aphrodite (Aelian, *NA.*, x, 34), and Artemis (Gruppe, op. cit., p. 1279). Compare, on the whole subject, *Zeitschrift f. Versch. Volkskunde*, x, 209; Rochholz, *Deutsche Glaube*, ii, 107; Pauly-Wissowa, s.v. *Schwalbe*. Artemidorus (*Oneirocr.*, ii, 66), says that to dream of swallows betokens a wedding!¹ It is thus easy to see why goddesses so closely connected with wedlock and childbirth should have been regarded as swallows.¹ Moreover, the swallow has also a mournful aspect, as is evidenced by the classical story of Itys, and this aspect seems, indeed, to have found its due place in the mythology of Ugarit (Ras Shamra), for in another appeal to the swallow—*K-š-r-t*, contained in a further verse of our present text, they are described as “they that go down to the asphodel meads, that weep . . . (crying) ‘O my kid !’” which accords with the fact that in Bion’s Lament for Adonis the Charites are said to have joined the mother-goddess in lamenting her slain lover (l. 91).

There is one other curious sidelight on the nature of the *K-š-r-t* to which attention may be drawn. On a small ovoid object made out of clay and discovered by Grant at Beth-Shemesh in 1934 there is, around the edge, a broken inscription in Ras Shamra alphabetic cuneiform, written retrograde. Most of this inscription is undecipherable, but on the upper line there is a group of characters unmistakably reading *K-š-r-t*, as M. Viroleaud has acutely divined. Now, if this curious object is an amulet or talisman, as has been

¹ For the presence of swallows as betokening domestic bliss, see especially J. G. Frazer, *Classical Review*, v (1891), p. 2. In a subsequent note (*ibid.*, p. 230b), he quotes an interesting Japanese parallel, which illuminates the incident of Danel and the swallows’ nest quoted above. “A household shrine,” so we are told, “to which the children pay voluntary and natural devotion are the birds’ nests built within the house.” This shows that “the House of Chirping” in the Ras Shamra text denotes a real nest, and is not merely a fanciful name for a shrine dedicated to the swallow—*K-š-r-t*!

suggested, it is interesting to note that the accompanying inscription invokes the K-š-r-t, thus strengthening the view that they were patronesses of domestic bliss, wedlock, and childbirth.

4. With regard to the deities mentioned in our poem, NIKKAL (N-k-l) is none other than the Sumerian Nin-gal (lit. "Great Lady, Queen"), consort of the moon-god Sin. The worship of Nikkal in Syria is known to us from several sources. The deity is mentioned along with the lunar Sahar and Nusku on the seventh century inscriptions from Nerab, near Aleppo (Cooke, *North Semitic Inscriptions*, nos. 64-5), and is spoken of, as worshipped at Harran, in the much later Syriac *Doctrine of Iddai* (ed. Phillips, 24, line 17). Egyptian texts (e.g. Leyden TI., 343, 6) speak of NKR/L as a Syrian deity, and she recurs, in the form NKR, both on the eighth century Aramaic inscription from Sujin and in the Ras Shamra Epic of Chereth, where she is the consort of Terah = Y-r-h, the Moon-god. Moreover, in a non-Semitic liturgy from Ras Shamra (RS., 1929, No. 4) mention is made of *E-b-n-k-l* = Abu Nikkal.

Y-R-H is quite clearly the god of the Moon (cf. Hebrew יְהוָה, etc.). He is already known to us as a deity of the West Semitic pantheon from his occurrence in several "Amoritic" proper names, e.g. Abdi-arah, Muti-arah, etc. (v. Th. Bauer, *Die Ostkanaanaer*, pp. 76, 91), and figures also in the Qatabanian inscriptions. Another form of his name, found at Ras Shamra, is T-r-h.

The reason why Nikkal and Yarih are introduced into this poem is that weddings are celebrated in the East at dusk. Accordingly, they are regarded as under the beneficent protection and patronage of the lunar deities. For this reason it is here expressly stated that the song is to be sung "at the sinking of the sun" (line 3).

The deity H-R-H-B "who reigns o'er the summer crops" is otherwise completely unknown. He is clearly the genius of summer fertility, and there is much probability in the conjecture of Dussaud (op. cit., p. 81, n. 5) that his name connects

with the root בָּרַח “ be dry ”.¹ He appears here as the counterpart of the Greek Hymen, and in this connection it is significant that the epithet ὑμενῆτος is indeed applied if once only, to Dionysos, the typical “ eniautos-daimon ” !²

The reason why Ḥ-r-ḥ-b is introduced into a marriage-song is made plain from the information collected in Dr. Hilma Granquist's absorbing study, *Marriage Conditions in a Palestinian Village*. She has shown that the most favoured time for celebrating weddings is autumn, when the harvest is past. Ḥ-r-ḥ-b is the king of that season, for it must be remembered that the word *q-s* which we have rendered "summer crops" also means "*the harvesting* of summer crops", as we learn from the description of September-October as יְנֵר קַם "the month of *qs*" in the Gezer agricultural calendar.

Thus it is clear that the deities mentioned in this text are all intimately connected with marriage, and this, indeed, is the very reason for their being introduced.

5. The marriage-ceremonies described in our text accord with general Mesopotamian and Palestinian usage. The suitor first makes an offer to the girl's father, and this is done through an intermediary. The formula used here is "Give Nikkal", and this accords with that employed by Shechem in the case of Dinah in Gen. 34, 11 ff.: "Then said Shechem unto her father and brothers: Let me find favour in your eyes, and I will give whatever you say. Name me never so much bride-price (*mohar*) and present (*mattan*), and I will give it, even as you say unto me. But *give me the girl to wife.*" When the father has given his consent, the bride-price is duly weighed out in the presence of the girl's family, her brothers fulfilling much the same function as in Gen. 34, 12. Moreover, it is not only the bride-price that is weighed out, but also that private

² Anth. Pal. ix. 524; v. R. O. Schmidt, *De Hymenaeo et Talasis*, pp. 20 ff.

estate which the bride carries with her at marriage. This consists of (a) the *š-l-ḥ* (Hebrew שְׁלִיחִים) or "parting-gift" presented by the father by way of dowry, and (b) the *m-l-g* (Hebrew מָלוֹג, As. *muhugu*) which is her own personal property, answering to the Arabic *jahāz*. Minstrels (or, attestants?) are summoned and the marriage-song is sung.

Part of the function of the K-š-r-t is to stand round and clap hands (*tq't*) over the bride. The purpose of this is made clear by comparative custom. Clapping at weddings is designed to frighten away those evil spirits who are thought to hover around the bridal couple. The custom is fully discussed by Samter, *Geburt, Hochzeit, etc.*, p. 58, and Marmorstein (*Jahrbuch f. Jiid. Volkskunde*, 1925, p. 358) has called attention to some Talmudic references to it. We may say, in general, that the K-š-r-t here fulfil the real function of bridesmaids.

6. We may now briefly pass in review some other interesting aspects of our text:—

Firstly, it is interesting to find that the K-š-r-t are invoked thrice, for this accords with the well-known custom of calling three times upon the divine names.

Secondly it is interesting to find herein the exact prototype of Isaiah's famous prophecy (vii, 14): "Behold, a virgin (or, more strictly, damsel) shall conceive and bear a son." In l. 7 of our text we read: "Behold, the damsel beareth a so[n]!"

Thirdly, it is interesting to find herein a prototype of the well-known phrase עֲשֶׂתּוֹת צָאנַךְ of the Pentateuch, for in ll. 28-9 we find the expression רְחִילָה עֲשֶׂה!

Fourthly, it is interesting to find a counterpart to Balaam's description of Israel as "a people that riseth up like a lion", for in l. 30 the future progeny of the new-born child are described as they that shall "rouse themselves like a lion"!

These striking parallels with Old Testament poetry naturally enhance the interest and importance of our text.

7. Finally it should be remarked that the points inserted between words in the following transcription of the text are

designed to indicate the *stichoi* of the original, the metre of which is the familiar "three plus three" of the Old Testament. These points do not, of course, appear on the original tablet, where the division between words is itself indicated in a somewhat capricious manner. It is possible that here and there amendments and improvements will have to be introduced in the future, but the writer believes that, in the main, the *stichoi* are here correctly marked.

TRANSLATION

A

I SING Nikkal
 And I indi(te) H-r-h-b,
 Who reigns o'er the summer fruit,
 Yea, even H-r-h-b,
 Who reigns o'er the
 In the hour when at the sinking of the sun
 The moon is to be seen.

MAY (such chil)d be spared to life
 As ever this maiden bears !

B

HEARKEN, O ye Graces,
 Daughters of the New Moon, ye Swallows :
 Behold, an the damsels bear a so(n),
 Turn ye, provide for his needs !
 (En)dow his flesh with blood,
 That he may (grow strong and be sp)ared to life,
 And that his (offspring may be numerous as) Terah's !

HEARKEN, O goddesses, O Graces,
 (Re)ar him, provide for his needs !

Grant unto his sire

And unto (his) gi(ve) corn (in abundance ?) !

HEARKEN, O ye Graces,
Daughters of the New Moon, ye Swallows !

C

(WHILOM) the Moon, the Lighter of heaven,
Went with a message unto H-r-h-b,
Who reigns o'er the summer fruit, (saying) :
" Give Nikkal !
The Moon-god pays bride-price for her !
Yea, even now am I lodging for the night
They that shall enter her house (as wedding-guests) !
Thou, take thou unto her father the bride-price for her !
A thousand bars of silver and ten thousand of gold will I
have cast,
As well as gems both light and dark (?).
I will turn his field into an orchard,
And the field of all her kinsmen into gardens of choice fruits ! "

THEREUPON H-r-h-b replied,
Even he who reigns o'er the summer fruit :
" O well-beloved of the gods,
O son-in-law of Baal himself,
Pay then the bride-price !
Then will I cause Baal, her father, to come nigh thee in favour.
May he make thy choicest ewes to breed !
May the maiden's family
May they rise up like a lion ! "

THEN the Moon, the Lighter of Heaven, replied :
" Now, behold, do thou attend !
Let now mine espousals with Nikkal take place ! "

THEREAFTER, when the Moon-god had paid the bride-
price for Nikkal,
Her father placed a stand for scales in position,
Her mother placed in position the tray of the scales,

Her brother marshalled the witnesses (? ?),
Her sisters attended to the weights.

THIS is the song which I sing of Nikkal,
And so do I indite the bright-shining Moon.

EVEN as the Moon himself,
May (this couple) prolong their days !

D

I SING the goddesses, the Graces,
The Daughters of the New Moon, the Swallows.

O ye Daughters of the New Moon who is so beneficent,
How do ye go down amid the asphodel meads
And with your twittering cry weep "O my kid!"
Along with Sir Gracious, the god of P-e-d !

Behold, the number of them is in my mouth,
The full tale of them is on my lips !

Now, when her dowry and her presents are ¹ weighed out ²
before her (?),
Even before P-r-b-h-š,
These are invoking blessings and clapping hands,
O kindly ones, O tender ones, O Graces !

COMMENTARY

N.B.—Divine names are discussed in the Introduction

¹ **אשר**: the direct accusative following this verb indicates that the song is sung *about* Nikkal and H-r-h-b, rather than *to* them. Cf. the same construction in BH. Ps. lix, 17: זָנִי אַשְׁר עֵן ; Ps. lxxxix, 2: חַסְדֵי יְהוָה עָלֶם אַשְׁרָה and compare the Latin construction *arma virumque cano*.

² **דאבד** [דָּאַבְדָּ] : restored with Virolleaud on the basis of 37 *infra* : יָבֹד יִשְׁרָאֵל הָלָה and of Danel, II, vi, 31 : יָבֹד יִשְׁרָאֵל. The word must mean something like "indite", but the etymology is doubtful. If שִׁיר really

¹ Or, "Here is her dowry, here her estate! Good fortune is with her!" So, in the presence of P-r-b-h-š
Are these invoking blessings, etc.

connects with שׁוֹר and means primarily "arrange lines, verses", might be identical with rt. בָּדַד "cut, divide, apportion", and refer to metre or measured stanzas. Then שִׁיר וּבָדַד* would be a stock expression meaning literally "to compose stanzas and metres". On the other hand, we may think of בְּדַד, etc., in the sense of "improvise".

³ קֶרֶב: "summer fruits", or more specifically "harvest of summer fruits". Cf. קֶרֶב on the agricultural calendar from Gezer, and בָּיִם קֶרֶב in IV Danel i, 5. The sense is that the god who presides over the yield of the earth is to prosper the newly born infant. קֶרֶב "harvest of summer fruits".

⁴ תְּעֻזָּה: meaning unknown. Evidently a synonym of קֶרֶב.

⁵ סְעֵמָעַ: So we may aptly restore, on the strength of Arabic سُمْعَ (and سُمْعَة) "to sink into the earth".

⁶ יְשַׁבָּח: Cf. Aramaic שְׁבָח "find" (Virolleaud, but uncertain because of שׁ = س, rather than ش). The verb is here passive. The "hour when at the sinking of the sun the moon is to be seen" denotes the hour of new-moon. The ritual is then recited because the new moon is propitious at childbirth, deities thereof appearing as patrons of childbirth in many religions. Note also that the K-š-r-t are specifically addressed in this poem, and in the analogous passage in the Poem of Danel, as "the daughters of the New Moon". Cf. also the BH. expression פְּרַשׁ יְרֵחִים "output of the moons" in Deut. xxxiii, 14.

⁷ חַי: apocopated optative from rt. חַי = BH. יְחַי "may he live".

⁸ יְלִיד: this may conveniently be regarded as the relic of "the child", the relative pronoun being understood after it, as often in OT. verse. Alternatively, יְלִיד may itself be that pronoun, the complete word יְלִיד being supplied in the gap.

⁹ מְשֻׁרְתָּה: Restore in accordance with the parallel passage, l. 15 *infra*: לְכַשְּׁרָת where לְ is a vocative particle, often found in RS. texts.

¹⁰ הַל עֲלִמָּת תָּלִד בֵּן: these words equate with the famous utterance, Isaiah vii, 14, הַל עֲלִמָּת בָּרָה וְלִנְצָה בֵּן thus shown to be a quotation! Note that עֲלִמָּת is here used like Arabic بَنْت to denote a married woman who has not yet borne a child.

¹¹ עַג: Cf. Syriac עַג and Sabean Φ̄γο "turn towards one attentively, pay heed". This usage is frequent in RS. texts.

¹¹ תְּזַדֵּן : Cf. Aramaic נִתְנָא, Syriac نُجُود, Palmyrene and Arabic زَاد = "provide victuals". Hebrew צָדֵי is perhaps related, but the agreement between the languages cited shows that the form with *zayin* is a genuine cognate, and not a mere secondary transformation. *Vide* Barth, *ES.*, p. 53.

¹² פָתָה : I restore תְּתַשְׁפֹת, with the Minæan sense of "endow", esp. used of divine beneficence. Cf. in this sense, Is. xxvi, 12: יְהֹוָה תְּשַׁפֵּת שָׁלוֹם לְמַן.

¹³ דָם : Virolleaud reads דָמֵי "my blood", but it is perhaps better to regard the *yod* as the prefix of a subsequent verb in 3rd sg. masc. imperfect. Something like Hebrew יָבַדֵל may then be supplied.

¹⁴ חַזֵּין : Restore נִזְחָזֵין "verily, he will live". Note that the form (unapocopated) is *indicative*, and hence indicates consequence.

¹⁵ בָּן : possessive suffix of 3rd sg. masc. A word meaning "his offspring" (e.g. תְּשַׁבְּחָה as in Keret, 24, 144, 152, 290, 298) might be supplied. For the innumerability of the Terachids, cf. Balaam's words concerning Israel, Numb. xxiii, 10: מִן-הָעָרָה יַעֲקֹב וּמִסְפָּר רַבָּה עָרָה (cf. As. *turbu'u*, Ar. رَبْع, Sam. رباع "dust") (om. סְפָר 1) רַבָּע (1).

¹⁶ מִמְנָה : restore תְּרִמְמָנָה with Virolleaud, in the sense of "rear him", and cf. Isaiah i, 2: בְּנֵים גָּדְלָה וּרְומָתָה and 23, 4: וְלֹא גָּדְלָה בְּחוּרִים רְומָתָה בְּתוּלָה.

¹⁷ לְאָדָן[ח] : the parallelism of אָדָנָה and אֶמְמָה *infra*, ll. 33-4, shows that here means "father". Evidently, the K-š-r-t are entreated to bestow prosperity upon the child's father and family. The word ... ל might have been e.g. לְאָחָה "to his brethren".

¹⁸ דָגָן : not the n. dei Dagan, as supposed by Virolleaud, but the Heb. קְדֻמָּה "corn". Abundance of corn (דָגָן) is frequently mentioned in OT as symbolic of prosperity; cf. Gen. xxvii, 28; xxvii, 37; Numb. xviii, 12; Ez. xxxvi, 29; Ps. lxxviii, 24, etc. Before this word supply e.g. נִרְבָּה "and abundance of".

¹⁹ תְּתַתָּה : I restore תְּתַתָּה "give".

²⁰ סְנַנָּת : Cf. Assyrian *sinuntu* (Virolleaud), and also NH. سَنَنَة and Arabic سنونه "swallow". On the mythology, v. Introduction.

²¹ לְאָדָן : Cf. Ethiopic አገክ, Arabic لَأْدَن and rt. of Heb. מְלָאָך. The new moon, starting on its journey, is regarded as going on an errand to the god H-r-h-b.

²² נִיר : not "light", which would be נַר or (fem.) נָרָת. The word is formed like Hebrew טַהַת "tailor" from rt. חַזֵּת, etc., and means properly "Illuminator".

²³ יְתֻרָה : the verb connects with Assyr. *terhatu* "bride-price". Trs. "Y-r-h pays the bride-price".

²⁴ אֶבֶת : Cf. Arabic بَيْت, Aramaic בֵּית, Syriac ܐܾܒܾܬܾ, Eth. ܾܒܾܾܾܾ, and Assyrian *bālu* (whence noun بَيْت, etc.) "spend the night". The verb is here factitive. **ערְבָם בְּבַתָּה** lit. "they that enter her house", i.e. the guests whom Yr-h has brought with him to the wedding. Thus, the sense is: "I have already put up the guests."

²⁵ וְתִמְהַרֵּה : "and take the bride-price for her." Cf. Hebrew מִתְּהַרֵּה in this technical sense.

²⁶ אֶלְפָכְבָּרְתָּחָרְצָאַשְׁלָה : this expression

recalls II AB. i, 26: **יְצָק כְּכָתָחָרְצָאַשְׁלָה** where **שְׁלָה** has the technical meaning of "pour out, smelt, found, fuse"; v. *JRAS.*, 1935, p. 10, n. 16, where I have cited philological parallels.

²⁷ צְהָרָם : in II AB. v. 81, 96, this occurs in the form טְהָרָם, but it is clearly connected with Arabic ضَهَرُ, Assyrian *sarāru* II and BH. צְהָל (Ps. xiv, 15), meaning "be bright", and thus denotes brilliant gems. A word like תְּהַנֵּן must be understood.

²⁸ אֲקְנָאָם : Cf. Syriac "darkish" and Arabic قَنْأَم "reddish". The meaning is thus antithetical to טְהָרָם and denotes dull gems. Cf. also Egyptian *kny.t* cited by Brockelmann, *ZDMG.*, 1931, p. 111. Ginsberg and others also cf. As. *uqnu* "lapis-lazuli". The initial נ still demands explanation.

²⁹ דָדָה : in the original sense of "kinsman", as again in BH. Am. 6, 10.

³⁰ חַרְנָקָם : ingeniously identified by Virolleaud with *urnuqqu*—an Assyrian plant-name. Further precision is at present impossible, but the rendering "choice plants" cannot be wrong in point of the general sense.

³¹ גַעַמְן אַלְמָ : the expression occurs elsewhere (e.g. Keret, 40) in the sense of "well-beloved of the gods". The Hebrew equivalent is אַזְוֹב אַלְדוֹם implied in the title of Abraham given in Is. xli, 8 (cf. Arabic الْخَلِيل).

³² לְתַחַנָּם: the suffix is the Assyrian -ma and Eth. **מָה**, etc. The prefix has vocative sense.

³³ **פֶּדֶר**: an Asianic word of frequent occurrence in RS. texts. It is the Urartic *padar* "city", with which cf. the city-names *Patara* in Lycia and *Pethor* (Egyptian *P-d-r!*) in North Syria. Sayce refers also to the Lydian *wedri*, but the comparison is doubtful. Bork finds a further cognate in the Eteocypriotic ("Alashian") *matore*, which seems to render Greek *πόλις* in one of the Amathus inscriptions.

³⁴ אֶקְרַבְךָ : I take the suffix to be dative, "I will make to come nigh unto thee". אָבִה is vocative, i.e. "O (thou who art) his (i.e. the child's) father!"

³⁵ יְצַפֵּר: this may be connected with Arabic *خَفَر*, and Hebrew *עֲפָר*, the young of a roe, hart, gazelle, etc. It may be regarded as a denominative verb in the factitive conjugation and possessing a somewhat wider sense, viz. "produce young".

³⁶ **עֲשָׂרֶת רְהִלָּךְ**: this is the exact equivalent of the Hebrew **עֲשָׂרֶת צָאן** in Deut. vii, 13; xxviii, 4, 18, 51, which denotes the "queen-ewes", i.e. the choicest of the flock. It is strange that Viroleaud has missed this striking comparison.

יבר דמי בת [אבה]³⁷: a very difficult phrase. Seeing that it is followed by words meaning “like a lion shall they rise”, it plainly refers to a gift of increased strength from the god Ba’al. This being so, יבר may connect with Hebrew II ברא, Ar. بـيـ, “be strong”, but the rest is still obscure. Alternatively, יבר may come from בר “be bright”, and דמי be kindred to BH. **דומות**, the phrase being idiomatic: “The countenance of her family shall be brightened.” *Non liquet.*

לְבָא יַעֲרֵר^{ss}: "A very lion shall he rouse himself." Cf. the description of Israel by Balaam, Numb. xxiii, 24: **קָנָן אֶם קָלְבִּירָא יָקוֹם**, and **וּכְאַרְיֵה תִּתְנַשֵּׂא**.

עַז עֲמָן נִכְלֵה תְּנִי: The first word derives from rt. **עַז** “ pay attention ” (l. 8), as in Syriac and Sabæan. **עֲמָן** is a form of **עַם** “ with ”, as already noted by Virolleaud. **נִכְלֵה** is the Hebrew **תְּנִי** “ my espousals ”. Thus, the meaning is : “ and turn ye, (let now) mine espousals with Nikkal (take place). ”

⁴⁰ **מִזְנָה**: cf. Arabic "weigh", Eth. **מִזְנָה** and Hebrew **מִזְנָה** "scales", i.e. for weighing the bride-price.

⁴¹ כַּלְבָּה : the "tray" of the scales.

ישער משרם⁴²: The meaning of the verb is unknown. Something like "marshals, convenes" may be suggested. משָׁרֵרִים is connected by Viroilleaud with Heb. מְשִׁירִים "singers". The reference would be to the wedding-minstrels. Alternatively, the word may connect with rt. שָׁרַר lit. "bind, confirm" in the sense of "attest", sc. the transaction. Cf. As. šarāru and שָׁרֵיד at the end of Jewish marriage-contracts.

לאבן⁴³: a brachylogical expression meaning "devote themselves to the weights, busy themselves with the weights".

אָר⁴⁴: "light" (Viroilleaud), but in RS. 1929, VI, 25, the word for "light" is spelled אָרָ.

כִּירָח יָאָרֶד⁴⁵: Cf. Ps. lxxii, 5 (LXX text): בִּירָח עַמְּשָׁמֵשׁ : בִּירָח יִפְנֵן עַולְם and Psalm lxxxix, 3 : לִפְנֵי יְרֵחּ דָוְרִים. The subject is, of course, the newly-born child.

בעל גמל⁴⁶: Cf. Assyrian *gamalu*, Hebrew גָּמָל (חַסְדָּה) etc., in the sense of "to benefit, show kindness". In Assyrian mythology it is pre-eminently the Moon-god (Sin) who acts as the beneficent helper of mankind; v. Jastrow, *Rel. Bab. u. Assyriens*, I, 439, whilst the auspicious character of the New Moon appears in the folklore of several peoples.

There is, moreover, an additional point in stressing the fact that the K-š-r-t are daughters of a kindly father, for this suggests that they are themselves kindly by hereditary instinct. Cf. the Rabbinic phrase: רְחוֹמָנִים בְּנֵי רְחוֹמָנִים. The kindness of the swallow is proverbial. The mother-bird will often starve herself in order to provide food for her young. Cf. Juvenal, *Sat.*, X, 231-2: *ceu pullus hirundinis, ad quem Ore volat pleno mater jejuna*; Iliad, IX, 323-4: *ώς δ' ὄρνις ἀπτῆσι νεοσσοῖσι προφέρησι μάστακ', ἐπεὶ κε λάβῃσι, κακῶς δ' ἄρα οἱ πέλει αὐτῇ.*

בערגזום⁴⁸: in the Hippiatric Treatise from Ras Shamra appears as the name of a plant, whilst in IV Danel, i, 8, it is associated with the Rephuim (O. T. Rephaim), or Shades. It is therefore, in all likelihood, a plant like the asphodel of the Greeks, which was believed to grow in the fields of the netherworld. The word is non-Semitic, the ending -*zi* suggesting the Asiatic -*zi*. This fact may, indeed, throw light on the provenance of the myth.

בָּזְבּוֹן⁴⁹: the words are best explained as imitative of the swallows' note. Cf. Pollux, *De avium vocibus*: χελδόνας ψυθυρίζειν; Latin poem Philomela: *Regulus atque merops et rubro pectore procne Consimili modulo zinzilulare sciunt*. In Venetian argot, the swallow was anciently called *zisilla* (Bochart, *Hierozoicon*, s.v. Hirundines), whilst Hebrew סִילִין (*sīlīn*) is thought to be of onomatopoeic origin, as is also the Assyrian *silištu* (Houghton, *TSBA.*, 1883, p. 72). Interesting attempts to represent the

swallow's note in modern languages will be found in S. Morris, *Bird Song* (Witherby, 1925); Coward, *Birds of the British Isles*, 1919 ("feetafeet, feetafeetit"); and in the story "Das Bekassinenmaerchen", in H. Frank's *Der Regenbogen* (Leipzig, 1897). Cf. *Notes and Queries*, 1932, p. 224b. Cf. also the interesting collection, Eduard Laugaste (-Trau), *Die Estnischen Vogelstimmendeutungen*, pp. 20-47 (Schwalbe), in *FF Communications*, Helsingfors, 1931, No. 97.

For the swallow as a bird of mourning, cf. the classical myth of Itys. Note also that Isis changes to a swallow when searching for and wailing for Osiris. Cf. also the name δολογυάν (wailer), given to the bird by the Greeks, and v. fully Bochart's chapter on Hirundines. Cf. also Moschus, *Epitaph. Bionis*, 42: οὐδὲ τόσον θρήνον ἀν' ὥρεα μακρὰ χελιδών. The Charites, along with Hymen and other spirits of domestic bliss, likewise bewail Adonis: αἱ Χάριτες κλαίοντι τὸν νίέα τὸν Κινύραο' Bion, *Epitaph. Adonisid*, 101.

I take **הַדְמָם** to be a distributive singular, but it could also be 2nd pl. imperative or indicative (with ending -ā as in Ethiopic and Assyrian, rather than -nā).

⁵⁰ **לִצְפָּן אֶל־לִצְפָּן** : the allusion is to the god's weeping for Aleyan-Baal, the god of autumn rains annually banished from the earth. Cf. the text edited by the writer in *J.R.A.S.*, 1936, p. 226; and cf. especially, *Death Of Baal*, VI, 12 ff., where Laṭpan's mourning for Aleyan is described. **לִצְפָּן** is a variant of **לִטְפָּן** (لطفن) (cf. Arabic **لطف**), whilst ¹ **לִפְפָן** occurs elsewhere as **לִפְפָן דָּפָן**. The scribe may have been influenced by Hurrian in writing the Hurrian ź for the Semitic *dal*-sound.

⁵¹ **שְׁלֹחָה** : Cf. Hebrew **שְׁלֹחוֹת** "parting-gifts", presented to a bride by her father, by way of dowry.

⁵² **מִלְגָה** : Cf. Neo-Hebrew **מִלְגָה**, Assyr. *mulugu*, the bride's personal property taken with her at marriage. Cf. the Arabic *jahāz*. On **מִלְגָה** in later Jewish law, cf. L. M. Epstein, *The Jewish Marriage Contract*, pp. 107-120.

⁵³ **יִשְׂתַּקְתֵּת עַמָּה** : I can make little sense of this. Perhaps it is a blessing invoked by the K-š-r-t, the while they clap their hands (תקעת). Then cf. the Hebrew idiom **שׁ תִּקְוֹה**, Job xiv, 7; Ruth i, 2; Lam. iii, 29; and take **שְׁלֹחָה וּמִלְגָה** absolutely: "Here is her dowry and here her estate: good hope attendeth her!" Or is **יִשְׂתַּקְתֵּת** an error for **וְשַׁתְּקַלְתִּי**, i.e. "her dowry and estate are weighed out in her presence (**עַמָּה** = Heb. **לִעַמָּה**, as often)?"

¹ ź is used to transliterate the Asianic character

בקעת תקעַת 54

I am not certain about the meaning of בקעה תקעת, but they seem to be fem. participles pl. qualifying בשרת in the last line. תקעת may well mean "clapping hands", on the meaning of which as a wedding custom, v. supra, Introduction, § 5. בקעה may then conceivably equate with Ethiopic usages of the stem בקע in the sense of "ingratiate". The words שלחה ומלנה ישתקת עמה will be an accompanying exclamation.

55 עם פרבָּהשׁ

⁵⁵ **עם פרבָּחַשׁ**: the preposition means "in the presence of" (= Heb. **לעִמָתָה**), as often in Ugaritic. The name **פרבָּחַשׁ** is Asianic.

דמקת צערת כשרה

The poet seems to exhaust all his adjectives and then falls back upon the very name בָּשָׂרָה, as if it could not be bettered. דְמָקַת = As. *damqu* (Viroleaud).

A Forgotten Branch of the Ismailis

By W. IVANOW

EVERY student of Indian history is familiar with the extraordinary event, quite unique in the annals of the Muslim dynasties in India, which took place in 1537, when Burhān Nizām Shāh, the Sunni ruler of the Ahmadnagar state, in the Deccan, proclaimed Shi'ism the official religion of his kingdom. Indian historians offer only "popular" explanations for this important step, attributing it to religious zeal or the superstitious fears of the prince. It appears, however, that Burhān Nizām Shāh (who reigned from 914/1508 to 961/1554), though nothing exceptional, was, nevertheless, quite a reasonable and statesmanlike ruler, who would hardly permit his religious emotions to carry him too far. It is therefore permissible to suspect some weightier motives behind this act, in the form of considerations connected with the policy of the then ascendant dynasty of the Safavids of Persia, which still remain unrevealed. As is known, both Shāh Ismā'il and Tahmāsp used to take much interest in Indian politics. In all this the central figure, who inspired the policy of Burhān Nizām Shāh, was the rather enigmatic personality of a Persian emigrant, a learned theologian, philosopher, poet, stylist, and politician, Shāh Tāhir, surnamed Dakkānī and Husaynī. It would be very interesting to study every side of his activities. This, however, would carry us too far; the present note is only intended to draw attention to quite an unexpected circumstance which presents this already extraordinary historical figure in a still more extraordinary light: some materials, recently discovered in Badakhshan, reveal that in reality he was regarded as an Ismaili Imam, a successor of the *khudāwands* of Alamūt, in a schismatic line of the Imams, which became extinct about two hundred years ago. His story therefore

revives the memory of the branch of the Ismaili sect, a subdivision of the Nizaris, which, though now entirely forgotten, left interesting traces in the history of sectarianism in Central Asia and India.

There are, comparatively speaking, many historical and biographical works in which Shāh Tāhir is referred to, and it is possible to draw the outlines of his biography, in so far as it belongs to the world of politics. But it appears that scarcely any of his numerous learned works are preserved. Similarly, most probably almost all works belonging to the sect which he, his ancestors, and descendants headed, are lost: I have succeeded in tracing only two, an account of which is given farther on. It would be extremely interesting if those who happen to read this paper, and who, by force of circumstances, are in a position to make inquiries in different parts of India, would look for persons claiming descent from Shāh Tāhir Dakkanī, and for manuscripts of his works.

1. BIOGRAPHICAL DATA ABOUT SHĀH TĀHIR

The most detailed account of Shāh Tāhir is given in the well-known history of Firishta, in his story of the dynasty of Nizām Shāhs.¹ As is known, Firishta (born in 960/1553) was as a child brought from Mazandaran to Ahmadnagar, most probably about ten or fifteen years after the death of the saint, when his memory was still fresh, and many of his descendants were living there. It is not improbable that Firishta, being a Persian, would have friendly relations with the family. His tone of profound sympathy and respect for the saint may suggest that such friendly relations continued even at the time of composition of his history.

There were, however, several works which were composed slightly earlier than his history (begun in 1015/1606), such as the *Burhāni Ma'āthir*, by 'Alī Samnānī Tabāṭabā'i²; *Haft*

¹ References are here given to the Nawalkishore lith. edition (no date), ii, pp. 110–118.

² Cf. C. Rieu, *Catalogue of Persian MSS. in the British Museum* i, 314–15. The work was begun in 1000/1592, and completed four years later. Cf.

Iqlīm, by Amīn Rāzī¹; *Majālisu'l-mu'minīn*, by Nūru'l-lāh Shushtari,² etc. But all these are much shorter on the point. Later works, such as the *Ātash-kada* by Luṭf-'Alī Beg Ādhar, the *Tarā'iqu'l-haqā'iq*, by Ma'sūm-'Alī Shāh Ni'matu'l-lāhī,³ etc., usually derive their information from the *Majālisu'l-mu'minīn*, only rarely adding a little from Firishta. It is interesting to note that works written in Persia about the same time, or later, such as, for instance, the *Habību's-siyar* or '*Ālam-ārāyi 'Abbāsī*, apparently do not mention the saint at all.

Firishta begins his story of Shāh Tāhir with an account of his genealogy, which is extremely interesting, apparently being that preserved in the family of the saint. It seems as if no other historian gives so many details about it. We will examine it in the next section. He states further that after the fall of Alamūt, Shāh Tāhir's ancestors resided in the village called Khūnd (or Khwānd, as in the *Majālisu'l-mu'minīn*), in the province of Qazwīn, "on the boundary of Gilān" (*dar sarhaddi Gilān*, p. 111).⁴ Apparently no village of that name now exists—things have changed tremendously in this corner of Persia during the last 500 years. Perhaps it may be the same as the hamlet Kawand, south-west from Zanjān on the Survey of India maps.⁵ The unanimity of all sources about this,

also H. Ethé, *Cat. of Persian MSS. in India Office Library*, No. 449, etc. The portion dealing with the history of Nizām-Shāhs was translated into English by W. Haig, in the *Indian Antiquary* for 1920–1923.

¹ Completed ca. 1002/1593–4. This work was not available to me for reference.

² Completed ca. 1010/1601–2. Here references are given to the old Tabriz lith. edition (not dated), pp. 341–4 (the last notice in the seventh *majlis*).

³ Part iii (lith. Tehran, 1319), pp. 57–66.

⁴ Neither the *Ta'rīkh Guzida*, nor the *Nuzhatu'l-qulūb*, nor the *Rāhātu's-sudūr* mentions such a place. It is quite possible that the name is the result of a misreading of another name in the original source from which all later authors took this information.

⁵ As is known to everyone who had to use the Survey of India maps on the spot, they are full of surprises and disappointments. The classic example of such surprises may be given in the fact that on the latest 16 miles to an inch maps, published after 1925, in such a frequented locality as the suburbs of Meshed, the sarai of Turuq is mentioned—a ruin of not the slightest

and generally about the fate of Shāh Tāhir before his arrival in India, is really remarkable, and it seems highly probable that all authors have taken these details from one and the same early work, which, however, is not mentioned by any of them.

Before Shāh Tāhir became the head of the family and the head (*sajjāda-nishīn*, as Firishta calls him) of his sect or order, the family were treated with high respect by the rulers of the land, and had a high reputation for their learning and piety. But Shāh Tāhir (who undoubtedly was an exceptionally gifted personality) eclipsed all of them, and attained enormous popularity. According to Firishta, who probably relates the version favoured by the family of the saint, this later circumstance roused the jealousy of Shāh Ismā'il Ṣafawī, the founder of the new dynasty, who also, in addition to his claims to worldly power, aspired to spiritual supremacy.¹ Shāh Tāhir had a strong party at the court of the Shāh, headed by Mīrzā Husayn Ḥusafāhānī, who for some reasons defended his interests. The saint, however, received the command of the Shāh to settle in Kashan, north-east of Isfahan, where he started lecturing in the famous local theological college. His popularity, which attracted many students, apparently roused the envy of local teachers, who sent a report to the Shah about heretical leanings of Shāh Tāhir and his correspondence with foreign courts. The Shāh, according to Firishta, always looking for a good pretext to get rid of the troublesome Sayyid, ordered his execution. Shāh Tāhir, however, was warned in time by his friends at the court; he escaped with his family to Fars, and

interest, one of those which are met with in hundreds. But a village with about two thousand population, Turuq, about 2 miles away, does not exist on the map. Therefore it is quite possible that, after all, Khūnd really exists.

¹ As is known, their ancestors were regarded as Sufic *pīrs*, and they themselves were almost deified by a sect of Shi'ite extremists. Traces of this sect still exist in the form of the secret community *Siyāh-supurī* (= "Black-shielded ones"), found in some localities in Northern Persia. One of their centres is situated in a village some 40 miles from Tehran.

thence, by sea, to Goa.¹ This happened in the winter of 926/1520. He proceeded to the capital of the 'Ādil-Shāhs, Bijāpūr, but the reigning prince, Ismā'il (916–941/1511–1534), paid no attention to him. The saint then decided to go to Mekka for pilgrimage, but on his way to the seaport he met Khwāja Jahān, the famous vazir of the Bahmani kings, who appreciated his talents. And, instead of going to Arabia, he came to Ahmadnagar, in 928/1522, which remained his home to his death. Immediately after relating this Firishta passes to the story of his miraculous healing of Prince 'Abdu'l-Qādir, the little son of the Shāh, who was seriously ill. He also relates different prophetic dreams of the Shāh, etc., which led to his conversion to Shi'ism, and subsequently to the proclamation of Shi'ism as the official religion of his state. The latter event took place in 944/1537; thus Shāh Tāhir resided in Ahmadnagar for sixteen years, and already occupied a very important position in the diplomatic service of Burhān Shāh before this happened. It may therefore appear that the miraculous dreams and other supernatural events came only later on in popular rumours, and in reality the conversion was the result of combined Shi'ite propaganda and diplomatic efforts. The appreciation of Shāh Tāhir's activities by Shāh Tahmāsp of Persia, who sent rich presents to him in 950/1543, apparently strengthens such theories. It appears, however, that Shāh Tāhir's lecturing and teaching in mosques is only mentioned in the earlier part of his biography: later on, quite naturally, he was too much preoccupied with the affairs of the State to spare time for teaching. The date of his death is variously given by different authors: the *Majālisu'l-*

¹ The story, on the whole, sounds rather unconvincing: many Sufi saints and poets of that period used to "correspond" with different princes. For instance, the famous Shaykh Ādhari Isfarā'inī (d. 866/1462) corresponded with the Bahmani kings of Gulbarga. Such correspondence obviously consisted of requests for donations, and offers of laudatory odes. It would be also difficult to imagine that the Ismaili leanings of Shāh Tāhir either were a surprise to Shāh Ismā'il, or constituted a sufficient ground for execution.

mu'minīn gives 952/1545,¹ the *Burhāni Ma'āthir*—953/1546, and *Firishta*—956/1549. His body was taken to Karbala for burial; perhaps, by chance, his tomb may still be preserved there, with the correct date on it.

Firishta (ii, 118) and *Nūru'l-lāh Shustarī* (343) give a list of his learned works, which is worth quoting: a *Dīwān* of *qasīdas* (*Firishta* gives no quotations, but a lengthy *qasīda* is quoted in the *Majālis*, from which it is requoted in the *Ātash-kada*); *Inshā'*, or a collection of epistolary models²; a commentary (*shark*) on the famous *al-Bābu'l-hādī 'ashar*³; a *Shark* on the *Ja'fariyya*, a treatise on Shi'ite *fiqh*; a super-commentary (*hāshiya*) on the *Tafsīr* of Baydawī; commentaries and super-commentaries on different treatises such as *Ishārāt wa Muḥākamāt*, the Almāgest (*Majistī*), the *Shifā'*, the *Mutawwal*, the *Gulshani Rāz*,⁴ the *Tuhfa'i-Shāhī*,⁵ etc.,

¹ C. Rieu, in his note on Shāh Tāhir (*Pers. Cat.*, i, 395) states that the same date is given in the *Tabaqāti Shāhjahānī*, and the *Tuhfa'i Sāmī*. The latter, being the earliest of all works mentioned above, and written by a contemporary of Shāh Tāhir, most probably is the source of the information of all later authors. Unfortunately the work is not accessible to me at present.

² There are apparently two versions of this work, the longer (*Rieu's Cat.*, i, 395) and the shorter, compiled in 938/1531–2 (*Ethé's India Office Persian Cat.*, 2056). At present copies of this *Inshā'* are rather rare in India; but it seems that a careful study of its contents would give much interesting new data to the historian of the Deccan.

³ None of his *sharks* and *hāshiyyas* are mentioned in Gunturi's *Kashfū'l-hujub* (Calcutta, 1330); most probably they were small opuscules, and had only local circulation, amongst the saint's pupils. The famous work *al-Bābu'l-hādī 'ashar*, on Shi'ite dogma, is by Ḥasan Ḥillī (d. 726/1326).

⁴ Perhaps the Ismaili commentary on the *Gulshani rāz*, of which a fragment was described by me in the paper published in the *Journal of the Bombay Branch of the Royal Asiatic Society* (1932, pp. 69–78), may belong to the authorship of Shāh Tāhir.

⁵ There are several theological works with this title: one, mentioned by Gunturi (*Kashf*, No. 486), is by Zaynu'd-din 'Alī Badakhshānī, who dedicated it to Muḥammad Quṭb-Shāh (really Muḥammad-Qulī, 989–1020/1581–1611). This is a commentary on the *Tajridū'l-kalām*. It is obviously too late a work to be concerned here. The other *Tuhfa'i Shāhī*, not mentioned by Gunturi, is a treatise on the correct methods of reading the Qur'ān. It was composed by Imādu'd-din 'Alī Sharīf Astrābādī, and dedicated to Shāh Tahmāsp (cf. W. Ivanow, *Catalogue of the Persian MSS. in the (old) collections of the As. Soc. of Bengal*, 1924, No. 975). But it is also possible that the work mentioned here was yet another one.

and also a short treatise, *Risāla'i Pālakī*, so named because he composed it while travelling in a litter. The *Majālis* also mentions a commentary on the *Tahdhīb*,¹ a treatise in Persian, *Risāla dar ma'ād*, and also a *Risāla* named *Unmūdhajū'l-ulūm*.

He was succeeded as the head of the community by his son, Ḥaydar Shāh, who later on travelled to Persia, to the court of Shāh Tahmāsp. In addition to this, he had three more sons and three daughters. His sons, Shāh Rafī'u'd-din Ḫusayn, Shāh Abū Tālib, and Shāh Abū'l-Ḥasan, occupied high posts in the service of Niẓām-Shāhs and 'Ādil-Shāhs.²

As far as it was possible for me to ascertain on the spot, there are no descendants of Shāh Tāhir known at present in Ahmadnagar, Bijapur, Gulbarga, and also possibly in Hyderabad. It would be extremely interesting to find whether any of these really survive there, or in any other part of India.

In Ahmadnagar, as I could see while on a tour in November, 1936, all memory of local connections of Shāh Tāhir had already gone. A wall is shown near Ni'mat Khān's tomb, in what probably is the oldest portion of the city; but there are no proofs that the ruin really has any connection with the saint. On the opposite side of the square there is a tomb, called the grave of Shāh Ḥaydar. But there is no inscription on it, and it is impossible to ascertain whether this Shāh Ḥaydar was the son of Tāhir, or not. It is remarkable that in Ahmadnagar, in which Shi'ism was proclaimed the official religion of the state, all traces of it have now disappeared, and it is represented only by a few families of Khojas and Bohoras, strangers in the town. Even the term *Ithna-'ashari*

¹ Most probably the famous work by Muḥammad Tūsī (d. ca. 458/1066), the *Tahdhību'l-ahkām*.

² According to the *Tarā'iqul-haqāiq* (iii, 67), Shāh Ḥaydar visited Persia still during the time of his father. Abū'l-Ḥasan, his younger brother, joined the service of 'Ādil-Shāhs. Unfortunately there is no indication of the chronology of these events, and of the dates of the deaths of both these persons.

appears quite unintelligible to the average local Muhammadan of no special theological education.

There are now very few manuscripts left in Ahmadnagar, and apparently there is not much chance of ever discovering there any of Shāh Tāhir's compositions.

2. IRSHĀDU'T-ṬĀLIBĪN

Some time ago I succeeded in obtaining from Badakhshan an old copy of Nāṣiri Khusraw's treatise, *Wajhi dīn*, transcribed in 929/1523. The volume also contained a few short Ismaili treatises and poems, apparently copied on spare leaves by the same scribe, Muhibb 'Alī Qunduzī. One of these, an opuscule only 19 pages long,¹ was a short treatise in Persian, intended for the instruction of Ismaili novices, the *Irshādu't-ṭālibīn fī dhikr A'immatī'l-Ismā'iiliyya*. The name of the author is not mentioned in it, but it is not quite improbable that it was compiled by the scribe, Muhibb 'Alī Qunduzī,² who apparently was a well-educated man.³ The treatise chiefly deals with the tradition concerning the Imamat according to the Ismaili theory, and the duties of the faithful followers towards them. Works of this kind are not uncommon; but an extraordinary feature of this opuscule is the most interesting reference to a split in the house of the Nizari Imams, the existence of which has never so far been suspected. It divided the family into two rival lines. One of

¹ Apparently one leaf, i.e. two pages, is lost, as the *custodes* do not agree between pp. 17 and 18. It is difficult to be absolutely certain, for this reason, whether the final two pages really form the end of the pamphlet; but this looks highly probable. The style, and the handwriting both are the same.

² Qunduz is a town on the left bank of the Oxus River, now within the boundaries of Afghanistan. At present it is a small place, but in the Middle Ages it was fairly important, and had some important *madrasas*.

³ The copy is written on old hand-made brownish paper, 6.5 by 4.25 inches, 13 lines, 2.75 inches long to a page. Good legible *nastūlīq*, of inelegant Herati type. The inner part of pages became damaged, and leaves are badly pasted to new paper; ends of the lines, which went under the new paper, are restored in a crude modern hand. The work begins with:—

أَخْدُ لِلَّهِ رَبِّ الْعَالَمِينَ . . . جَنِينَ كَوَدَ مَوْلَفَ أَيْنَ رَسَالَةَ بَنَدَةَ ضَعِيفَ آنَ حَضَرَتْ
مَذَسَّهُ اَعْلَى اللَّهِ . . . وَظَهَرَ عَلَى بَسِطِ الْأَرْضِ دُعَوَةَ الْخَ

them still continues, headed at present by H.H. the Agha Khan. The other, to which Shāh Tāhir belonged, apparently became extinct soon after the time of Aurangzīb.

At the end of the treatise, there is added an Arabic prayer, *Du'āyi tagarruḍ*, which is five and a half pages long, and apparently forms an appendix to the preceding treatise. It contains the names of all the Imams of this line, and therefore is an extremely valuable means for checking the statements of the *Irshād*.¹

The treatise opens with the usual speculations as to the necessity of Imamat as Divine guidance of mankind, with the usual references to the *hadīths* such as "whoever dies without having recognized the Imam of his time, he dies as a *kāfir*", etc. After this the author mentions the earlier great Prophets, beginning with Adam. Each of them was succeeded by seven Imams. With Muhammad, the Final Prophet, "the door of prophetship became closed" and Imamat has become a permanent institution. An account is given of the names of the earliest Imams, up to Ja'far as-Sādiq; the schism of the *Ithna-'asharis* is explained; after Muhammad b. Ismā'il the names of the three hidden Imams are given as Ahmād ar-Raḍī, Muḥammad Wafī, and Ahmād Taqī.² The names of the Fatimids are given up to Mustansīr bi'l-lāh (with some mistakes). *Hakīmi muhaqqiq Nāṣiri Khusraw* "ornamented his *Dīwān* with the mention of this Imam". Mustansīr "entrusted Nizār to *Khwāja Hasani Şabbāh*", and the latter brought him to Persia from Egypt, for concealment.³ Nizār

¹ It is written apparently by the same copyist, only in large *naskh*. It begins with:—

اللهم اتني قرب [sic] اليك بك وحدك لا شريك لك [sic] ثم محمد لله علينا
[sic] عبدك ورسولك اخْ

² As is well known, their names are often differently given: the Fatimid version is 'Abdu'l-lāh, Ahmād, and Husayn. The present Nizari Ismaili version is Ahmād, Muḥammad, and 'Abdu'l-lāh.

³ As is known, Nizār was murdered, together with one of his sons, in prison, by the order of his brother, Musta'li. It is still uncertain whether Hasan b. Şabbāh succeeded in bringing to Persia his son or grandson—the latter seems to me more probable.

was followed by three hidden Imams—Hādī, Muhtadī, and Qāhir (just as in the version of the genealogy which is at present officially recognized).¹ Then followed the *khudāwands* of Alamūt, about whom, most unfortunately, the author gives no new information. After Ruknu'd-dīn Khūrshāh are mentioned Shamsu'd-dīn Muḥammad and Mu'min Shāh.

Here the author inserts his account of the split in the house of the Imams, and the difference between the “*shī'a* of Muḥammad Shāh and the *shī'a* of Qāsim Shāh”, the sons of Mu'min Shāh. Being a devoted follower of the former faction, he is bound to represent the latter as the wrong one, but his explanations do not sound very convincing. Most probably his version is based not on documents, but simply on popular tradition, which is quite a different matter. It is interesting that Mu'min Shāh is entirely omitted in the present official version of the genealogy; therefore it is not quite certain whether the author implies *three* different branches: the ancestors of the present line, and two lines which descended from Mu'min Shāh, or only the last two.

The names of the Imams after Shamsu'd-dīn Muḥammad are mentioned farther on, in the analysis of the genealogy. Here we may sum up the end of the treatise. Its subject is the attitude of the devout Ismaili to his religious duties. He is bound to obey the Imam without criticism, hesitation, or demur. It is not given to ordinary mortals to perceive the real reasons and motives of the Imam's actions: why on one occasion he makes himself manifest, and appears to the world in full glory and might of a powerful king, and why at another period he goes into concealment, imposing upon his true followers the hardships of living under the *taqīyya* and suffering from persecutions at the hands of their enemies. There is,

¹ In the *Ta'rikhi Guzīda*, which gives interesting information about the Imams of Alamūt, and seems to be based on reliable sources, *al-Qāhir bi-ahkāmī'l-lāh* is merely the title of the next Imam, Hasan 'alā *dhikri-hi's-salām*. This seems highly probable, but the original sectarian tradition is against this. Cf. *Kalāmi Pīr* (Bombay, 1935), p. 44 (p. 51 of the text).

however, no doubt that a person who is the lieutenant of God will never act, or cause others to act, in an evil way, falsely or unjustly. The faithful must do their religious duty regardless of the difficulties to which they may be subjected for the sake of trial.

The author refers once to *Nasru'd-din* (apparently for *Nasru'd-din*—*Tūsi*?), to “*Fuṣūlī mubārak*”, by which Ismaili authors mean their religious literature,¹ and to a *Fasl*, probably an epistle, which was sent (by one of the Imams) to Sultān *Khwārizm-shāh*. It contains some sort of prophecy about a powerful king who has to come from the other (eastern) side of the Jayhūn (Oxus) River, to uphold the cause of Islam, and to give the caliphate to the descendants of the Prophet.² And if the founder of such a state appears from the hills of Daylamān, or the hills of Qazwīn and Tāliqān, he will receive complete assistance from that great king from behind the Oxus, and the newly founded empire and its religion (*da'wat*) will extend from Daylamān to Constantinople.³ “This is the prophecy which was given to the faithful and these are people who await its fulfilment.”

All this the author heard from the *dā'is* of the rightly guiding *da'wat*, and noted it, adding suitable quotations from the *Fuṣūl* for the instruction of others.

Transcribed by Muhibb-'Alī (Qunduzī), and finished on Tuesday the 25th Rab. ii, 929/14-iii-1523 (this, however, was not a Tuesday, but probably Monday evening).

We may now take up the names of the Imams, and thus the genealogy of Shāh Tāhir. At present I have three versions of it at my disposal: the earliest, the fullest, and the most reliable is that which is contained in the *Irshādu't-talibīn*, and repeated in the *Du'āyi taqarrub*, appended to the former.

¹ Cf. *Kalāmi Pīr*, pp. xxviii-xxix, footnote 3.

² Similar prophecies are vaguely referred to in the *Rawdātu't-taslim* of Nasiru'd-din Tūsi (cf. *JRAS*, 1931, p. 560).

³ If this is true, it would be interesting to find in how far all this was connected with the expectation of the impending invasion of Chingiz Khān; or, if this is of a late origin, with the rise of the Safavids.

The second—chronologically—is the version given by Firishta in his history (ii, 110). And the third is found in the appendix to the *Lama'ātū't-tāhirīn*, which is fully dealt with in the next section of this paper. There is also a fourth version, found in a modern work in Urdu, the *Kanzu'l-ansāb* (or *Anwāru's-siyādat*).¹ But this version, obviously fictitious, traces the descent of Shāh Tahir not from the Ismaili Imams, but from the son of Muhammad b. Ismā'il, Ismā'il the Second, who was not an Imam.²

We need not say much about the ancestors of the saint prior to Ruknu'd-din Khūrshāh. As in all genealogies, there are mistakes, sometimes quite obvious; they are mainly due to the negligence of the scribes. This especially applies to the occasions on which one and the same name, or a group of names, is to be repeated. For the sake of brevity we may refer here to the *Irshādu't-tālibīn* under the letter I; to the *Lama'āt* under L, and to Firishta under F.

The 27th Imam (counting from 'Alī b. Abī Tālib, and omitting his son Ḥasan) was Ruknu'd-dīn Khūrshāh; in L, Mahmūd Khūrshāh; in F, nonsensically, al-'Ālim, probably for al-Qā'im.

The 28th: Shamsu'd-dīn Muḥammad (I); in L, Ahmād al-Qā'im; in F, Khūrshāh.

The 29th: in I, 'Alā'u'd-dīn Mu'min-shāh (I); in L, Shāh Khūrshāh Shamsi Tabriz; in F, Muḥammad Zardūz Shamsi Tabriz.

¹ Published in Urdu, without the name of the author. Lith. Lahore, no date.

² His genealogy is given on p. 380. It begins as the supposed genealogy of Shamsu'd-dīn, the Ismaili missionary, who is buried in Multān, and now known under the name of Shamsi Tabriz. Cf. my paper "The Sect of Imam Shah in Gujrat" (*Journal of the Bombay Branch of the R.A.S.*, 1936), p. 31. The line bifurcates after No. 15, and goes as follows: 16. Ja'far Raḍīyyu'd-dīn; 17. Shāh Qāsimi Anwār; 18. Murtadā; 19. Muḥammad Ismā'il; 20. 'Abdu'l-Mu'min Shāh; 21. 'Alī Khālid; 22. Ja'far Shāh Khūrshāh; 23. Muḥammad Riḍā; 24. 'Alī Jalālu'd-dīn; 25. Ḥasan al-'Ālim; 26. Rafī'u'd-dīn 'Alī; 27. Mu'min Shāh; 28. Muḥammad Raḍīyyu'd-dīn. The author has taken this version from the *Malfūzi Kamāliyya*, of Sayyid Kamālu'd-dīn "Mawji Daryā".

The 30th : In I, Shamsu'd-din Muḥammad Shāh (II) ; in L, Shāh Muḥammad Shāh ; in F, Mu'min Shāh.

The 31st : In I, 'Alā'u'd-din Mu'min Shāh (II) ; in L, Shāh Ibrāhīm (?) Mu'min Shāh ; in F, Mu'min Shāh.

The 32nd : In I, 'Izzu'd-din Shāh Tāhir I ; in L, Shāh Tāhir ; in F apparently omitted.

The 33rd : In I, Radīyyu'd-din Muḥammad ; in L and F apparently omitted.

The 34th : in I, 'Izzu'd-din Tāhir Shāh II ; in L and F omitted.

The 35th : In I and L, Radīyyu'd-din 'Alī ; in F simply Radīyyu'd-din. Here the genealogy in I comes to an end.

The 36th : In L and F, Shāh Tāhir (III, Dakkanī).

The 37th : In L, Radīyyu'd-din Haydar ; in F, Haydar.

The 38th to 42nd : In L, Ṣadru'd-din Muḥammad ; Shāh Khudābakhsh ; Shāh 'Aziz ; 'Abdu'l-'Aziz ; Shāh Mīr Muḥammad Musharraf, who flourished about 1110/1698-9, i.e. the date of the completion of the *Lama'ātu't-tāhirīn*. It is not certain, however, whether he was an Imam, or simply a son of the preceding Imam.

The confusion in the early part of this genealogy is obviously due to the confusion of names and titles of different Imams, and the omission of the names which are repeated—the scribes easily take it for a mistake of their predecessors, and “correct” it.

Ruknu'd-din Khūrshāh, as is known, was drowned on his journey to Mongolia, probably in 657/1259 ; his son, Shamsu'd-din Muḥammad, most probably died *ca.* 710/1310-11. Shāh Tāhir Dakkanī's father, Radīyyu'd-din 'Alī, most probably was still living in 929/1523, i.e. the date of copying of the *Irshād* and the *Du'āyi taqarrub*, in both of which his name is given last. It is quite possible that a detailed study of modern Indian history of the last three hundred years may lead to the discovery of information concerning the biographies of Shāh Haydar and his descendants.

3. LAMA‘ĀTU’T-TĀHIRĪN

The only known work composed in India, and reflecting the ideas of the sect of Shāh Tāhir, is the lengthy versified treatise in the strain of Sufic and Shi‘ite extremism, the *Lama‘ātu’t-tāhirīn*, completed *ca.* 1110/1698–9,¹ by Ghulām-‘Alī b. Muḥammad b. Aḥmad, with the *takhallus* Ghulām or Ghulāmā, a native of Aḥmadnagar in the Deccan. The work has already been noted by me in my *Catalogue of the Persian MSS. in the (old) collections of the Asiatic Society of Bengal*,² and in a special note, “An Ismailitic Pedigree” (*Journal of the Asiat. Soc. of Bengal*, 1922, pp. 403–6). To save the necessity of referring to these publications, it may be here added that it is divided into a sort of preface, and 110 *lam‘as* (according to the numerical value of the word ‘Alī). The headings of these *lam‘as* are very lengthy, composed in stilted rhymed prose; they usually give no complete or correct idea as to the contents of the chapters which they head. Some of them are more than half a page long. The work is written with great care to observe the *taqīyya*, and contains, in addition to eulogies of the first three caliphs, also abundant eulogies of Aurangzib. It is a veritable deluge of pious platitudes, inferior versification, endless repetitions, and very far-fetched allusions, probably correctly intelligible only to a few initiated—1,162 pages!³

The work emphatically eulogizes the Twelve Imams, and rather makes it too clear that it propounds the *Ithna-‘ashari* religious ideas. And yet the reader at once feels that this is not the usual style in which *Ithna-‘ashari* Sufic poems of the later Safavi and the earlier Qajar periods are written. In spite of the diffuse, intentionally vague, chaotic, and very elusive expressions of the author, one has no great difficulty in picking up here and there isolated terms, ideas, and

¹ Strangely the author gives three different chronograms for the date of completion, the other two being 1107 and 1108, i.e. 1695–7.

² Calcutta, 1924, No. 818.

³ In the MS. folios are numbered incorrectly and after f. 256 there is a mistake—30 folios omitted in calculation.

expressions which belong to Ismailism. Curiously enough, the author even invents a new term, *tu'ām*, originally meaning in Arabic "orphan", which he persistently uses instead of the usual *Imām*, whenever he means the Ismaili Imam, not the *Ithna-'ashari* one. He freely simulates that conventional, "ecstatic" style, in which the "mystically excited", "intoxicated" poet utters extraordinary sentences, which are supposed to be nothing but the piety which "lost its head". For all these reasons to give an exhaustive summary of what the author really intended to say would require a minute analysis of almost every line of this voluminous work, careful comparison of his ideas in the different portions of his book, etc. And all this would be, after all, mere waste of time and labour, because it would be impossible to be absolutely certain in the end whether he really meant this or that exactly in the way wherein it can be inferred from his text.

It is very interesting to see that the author freely uses many such Ismaili terms as in ordinary Nizari texts fell into disuse long before him, as for instance *Nāṭiq*, *Sāmit*, *Asās*, etc., while, at the same time, "modern" terms like *mustaqarr* and *mustawda'*, etc., are also found. As mentioned above, the term *Imām* is usually replaced with *Tu'ām*, and *Imāmat* with *Tu'āmiyyat*. The expression "twelve Imams", just as in other Ismaili books written under the *taqiyya*, plainly has the sense of "all the Imams". The term *dā'i* never appears, but *hujjat* is occasionally found, though not in an Ismaili sense.

In his book the author here and there occasionally refers to various Sufic and theological works, especially to the *Bahru'l-ma'ānī*.¹ There are many references to different Sufic poets, such as 'Abdu'l-lāh Ansārī, Qāsimi Anwār, and

¹ This is the famous collection of thirty-two letters, dealing with Sufic philosophy, written in 824-5/1421-2, by Muhammad b. Nasir-i'd-din Ja'far al-Makki, a disciple of Gisūdirāz. The headings of the letters are given in H. Ethé's India Office Catalogue, No. 1867-9.

especially Jalālū'd-dīn Rūmī,¹ and Shamsi Tabrīz.² The latter, perhaps, is so often invoked here not merely as the supposed author of certain poems, but as one of the Ismaili Imams with whom Rūmī's associate, Shamsi Tabrīz is often confounded. Twice (ff. 246 v., and 303 v.) the author obviously refers to Nāṣirī Khusraw—an exceptionally rare reference in a late work such as this. There are many stray references to other works, poets and Sufis, Imams, quotation and explanation of various *hadīths*, verses of the Qur'ān, etc.

This is a summary of the contents of the 110 *lam'as*, as reflected in their bombastic headings : 1. *Tawḥīd*, praise to the Prophet, etc. 2. Bombastic talk about Divine Love (*'ishq*). 3. Praises to the *pīr* or *murshid* (by whom the author plainly means the Imam). 4. Explanation of the *hadīth* "the (true) knowledge is only one point, but the ignorant people multiplied it". 5. The *hadīths* "I was a hidden treasure, etc.,," "I am from the Light of God", etc. 6. The *hadīth* "I am the city of knowledge, and 'Alī is its gate". 7. "The world is the field on which future life is sown". 8. The verse of the Qur'ān : "I did not create the Jinns and mankind except for worshipping Me". 9. Another verse : "Am I not your Lord ?" 10. Religious knowledge. 11. The fourteen *ma'sūms*. 12. Objection to asceticism practised without knowledge. 13. Again about "the knowledge of one single point". 14. "I am the scales for truth, etc." 15-20. Sufic virtues : *mushāhada*, *murāqaba*, *adhkār*, *mahabbat*, *'ishq*, *jamāl*, and vices—*hirṣ wa*

¹ Rūmī's connection with Ismailism is rather doubtful, but it is significant that so early as the beginning of the ninth/fifteenth century popular ideas associated the great Sufic poet with the Ismailis : Shaykh Ādhari Isfarā'inī (d. 866/1462) had to refute this in his *Jawāhiru'l-asrār*.

² As I have already emphasized in my note on the Sect of Imam Shah in Gujarat (*Journal of the Bombay Branch of the R.A.S.*, 1936, p. 30), there is much confusion in the legends which surround the name of this enigmatic saint. It appears that his association with the Ismaili line of the Imams came into existence at a very early date, and persisted ever since to this day, when the *mutawallīs* of the shrine of Shamsu'd-dīn in Multan positively assure every one about the identity of the friend of Rūmī with the person buried in the shrine.

- hawā*, etc. 21. "This world is carion, coveted only by dogs." 22. Repentance. 23. "Love for this world is the source of all misfortunes." 24 and 25. Spiritual love ('ishq). 26. On the war against one's own vices (*jihādī akbar*). 27. Asceticism. 28. *Zari Ja'farī*. 29. Death in the attaining of nearness to God. 30. The *jalātī* and *jamālī* attributes of God. 31. On punishment in future life. 32. The *hadīth*: *mā yarabbī-ka*, etc. 33. "In my people there is what was amongst the Banū Isrā'il." 34. On *ma'rifat*. 35. The heart resembles the Ka'ba. 36. "The heart of the faithful is the Throne of God." 37. The *kalima* is written on the Throne of God. 38. And the name of 'Ali. 39. The story of Abraham. 40. *Ma'rifat*. 41. Explanation of the *āyatū'n-Nūr*, its *tafsīr* and *ta'wīl*. 42. The *Shajara'i tayyiba*. 43. Explanations of the verse *wa't-tin* (xcv, 1), etc. 44. *Nubuwat* and *walāyat*. 45. The verse about God's sitting on the Throne (vii, 52, and others). 46 and 47. Sufic interpretation of the *Mi'rāj*. 48. The rite of *shīr-u birinj*. 49. The same, explained. 50. A question put to the Prophet. 51. "I saw God on the night of the *Mi'rāj* in a beautiful form." 52. "*Mā 'arafnā-ka haqqa ma'rifati-ka*." 53. Explanation of the verse: "*laqad jā'a-kum Rasūlun*" (ix, 129). 54. Properties of *walāyat* and *tu'āmiyyat*. 55. The Imams. 56. Their actions, etc. 57. Mystic symbolism of Arabic grammar. 58. The *dhikr* of the Sufis. 59. The vision of God. 60. *Zuhūr*. 61. The service to the *habib*. 62. The vision of the Prophet. 63. The forty *Abdāl*. 64. Miracles, '*ajā'ib wa gharā'ib*. 65. *Mi'rāj*. 66 and 67. The return of the Prophet from the *Mi'rāj*. 68. *Taqlīd, hasad, kibr*. 69. *Hasad*. 70. Praise to 'Ali. 71. The story of the head of Imam Husayn. 72. Mourning for Husayn. 73. Story of the murder of other Imams. 74. Obedience to the unjust and tyrannical rulers. Position of the depressed classes in India. 75. An instructive story. 76. Verse ix, 32: "they want to extinguish the light of God." 77. Devotion to the members of the Prophet's family. 78. Eulogy of Aurangzib. 79. *Muhibbāni ahli Bayt*, references to the author's own ancestors. 80. "Whoever does not recognize the Imam of his time, dies

as a *kāfir*.” 81 and 82. “Prayer is wasted if one does not recognize the Imam.” 83–5. *Irfān*, or mystic knowledge. 86. Mystic visions (*ru'yat*). 87. Explanation of the *mihrāb*; idolatry. 88. *Ishq*. 89. “Man is the mirror of his Lord.” 90. Fast. 91. *Zakāt*. 92. *Hajj*. 93. Names of the Prophet. 94. Names of ‘Alī. 95. *Dhū'l-faqār*, Duldul, and adventures of ‘Alī; the legend of the conversion of Layth, Qays, etc. 96. Knowledge of the Imam. 97. ‘Alī is the source of the knowledge of the *shari‘at*, *tariqat*, and *ma‘rifat*. 98. “‘Alī is the Lord of every one whose lord I am.” 99. Names of the Prophet and ‘Alī. 100. Creation of eight Paradises. 101. Salmān Fārsī. 102. *Ma‘ād*; explanations of a *qaṣīda* of Rūmī. 103. Rebirth of the Divine Light in the *Tu’āmān*, i.e. the Light of Imamat. 104. Childhood of ‘Alī. 105. His youth. 106. His death and miracles. 108. *Ka-mā tamūtūn tub’athūn*. 109. Devotion to the Imam. 110. Love for Imams. *Khātimā*.

All this is sufficiently chaotic, but the summary shows only the *principal* subjects treated in each section. In reality the author deviates every moment from the main line of argument, and being much upset by the requirements of the verse and rhyme, he constantly introduces additional ideas, remarks, etc., so that the reading of his voluminous work is a real punishment.

Under circumstances such as these it is extremely difficult to form an opinion about the purely Ismailitic elements of the author’s theories. It is clear that the author tries here and there very cautiously to introduce in a Sufic guise the Ismaili theory, according to which the nature of God is incomprehensible to the mind of the mortals through His being beyond the perception of our senses. We, mortals, can know Him only through His Imam, who is the one on whom Divine Light rests. This is easily paraphrased into the Sufic doctrine of the *pīr*’s, spiritual teacher’s, guiding the disciple to the *ma‘rifat*, which, surely, in earlier Sufism had quite different implications. His ideas about the Imam could not be systematically expressed, but indications of this theory

are found in abundant epithets, all implying practically Divine attributes. But these, again, are not uncommon in ecstatic Sufic poems ; and orthodox theologians accept the explanation that they are nothing but effusions of " spiritual intoxication " of a true Lover of God.

Though the author in the course of his lengthy work comments on all the *hadîths* on which Ismaili arguments are usually based, he, of necessity, can never clearly indicate what he is driving at, with regard to the theories which he has to prove ; he usually stops at the last moment leaving the reader to come to a proper conclusion. This, however, is done with much intentional " blurring " of the effect, and reduction of the generally Shi'ite, or specially Ismaili, colouring. In the long run this is exactly the feature which makes the reading of his book so unbearable—it creates the impression that the author talks aimlessly, never definitely proving anything. In this respect he is even less definite than those of his co-religionists who wrote in Persia. The latter had only to consider the effect produced by their theories upon fanatical *Ithna'-asharis*, while the author of the *Lama'ât* had also to take into account the reactions which his ideas could rouse in the hearts of pious Sunnis—and this is quite a different matter.

Though there are frequent references to Shâh Tâhir in the work,¹ and numerous places in which his immediate successors are mentioned and eulogized, the *Lama'ât* offers practically no materials for the study of the history of the sect. The reader cannot even discover where the heads of the sect were residing, or what were even the approximate dates of their Imamat.²

¹ He is referred to on at least over a dozen occasions : ff. 106 v., 142 v., 188, 234 (*bis*) v., 242, 247 v., 280 v., 308, 322 v., 417 v., 421, 514, etc. On f. 234 (*bis*) v. he is even called " *mulaqqab ba Dak'hani* ".

² The passages in which all his successors are mentioned one after another, in their proper sequence, are found on ff. 234 (*bis*) v., 285 v., 287, 514. It is hardly worth quoting these passages, because they are nothing but vague and rather meaningless collections of bombastic epithets and glorifications. One of the successors of the saint, 'Aziz, is referred to even more frequently than himself, more than fifteen times. It is remarkable that in many such

It would be extremely interesting to discover other works of the followers of this sect, especially those which were composed under the successors of Burhān Nizām Shāh, and therefore could be expected to be more outspoken with regard to the real tenets of their doctrine. But it is quite probable that all these books, even if they really existed, are long since destroyed by worms, humidity of the climate, and neglect of their successive owners.

4. THE RELIGION OF SHĀH TĀHIR

Though Firishta is aware of Shāh Tāhir's connection with Ismailism, and even relates the story of his being accused of preaching Ismaili doctrine, he, together with all other historians, never questions the fact that Burhān Nizām Shāh was converted to the *Ithna-'ashari* school of Shi'ism. The only known work of a follower of his sect in India, the *Lama'ātu't-tāhirīn*, analysed above, tries everything possible to leave the reader under the impression that its doctrine is that of the *Ithna-'ashari madhhab*.

All this, however, is in no way binding upon the student. India is *par excellence* the country of religious syncretism, in which religious schools, apparently of the most antagonistic types, easily become combined into a new sect, and in this form continue for centuries. The descendants of the Satpanthi *pīrs*, connected with the shrine of Imām Shāh in Gujerat, profess to be *Ithna-'asharis*, while carrying on the preaching of the Satpanthi doctrine which has little or nothing to do with the real *Ithna-'ashari* system. The Satpanthi *pīrs* of Khandesh call themselves Sunnis while the doctrine is equally remote from Sunnism. The presence of such an institution as the caste system introduces many complications. The conceptions of caste and religion very often cover each other, but not rarely they either only partly coincide, or do not coincide

passages there is almost invariably a reference to Shamsi Tabriz, whose name very often reappears here. This surely cannot be attributed to some particular admiration for this shadowy Sufic saint, but is a hidden emphasizing of Shāh Tāhir's descent from the Imams of Alamūt.

at all. A certain follower of the Satpanthi sect may really be a faithful Satpanthi in his spiritual life, while in social life he may comply with all the rules prescribed to a Sunni. Therefore he may have full right to be officially regarded as a Sunni, a "Sunni by caste". In Indian conditions it is quite normal to see such "followers of two religions"—just as in the West Christians may also be Masons. Quite probably the enormous influence which was exercised in Mediaeval India by some famous Sufic saints, who had vast crowds of followers, may be attributed to exactly the same psychology, or rather practice.

Large numbers of Hindus are devoted followers of various Sufic and sectarian saints, etc. They are, and always remain, Hindus in their social aspect, but may be true Sufis, etc., spiritually. This continues to this day, and is regarded as quite a normal thing, however unthinkable it may appear to the people accustomed to the ideals prevalent in other Muslim countries.

It is quite possible, as is testified by the contents of the *Lama'ātu't-tāhirīn*, that the *Ithna-'ashari* religion preached in the name of Shāh Tāhir was of this type. Shāh Tāhir, an exceedingly learned man of his time, was rather different from the usual type of the *makhdūms* or *sajjāda-nishins* whom one meets now in India; as a rule they are ignorant beggars, and nothing more. But it is quite possible that being a born diplomat and an observant and practical man, he noticed this peculiarity of Indian conditions, and freely preached a moderate and Sufic-like form of Ismailism, in the guise of *Ithna-'asharism*, from which, most probably, he took only the outer, social side; to this he probably was accustomed even in Persia where he had to live under the *tagiyya*. By spreading his "*Ithna-'ashari*" religion he could gain much in the political world, improving the relations of his masters with the then very powerful state of Persia under the earlier Safavids.

In my *Guide to Ismaili Literature*¹ I already drew the attention of students to the fact of a striking difference in the tone, terminology, etc., between the Persian Ismaili literature preserved in Badakhshan (in a broad sense), and that in Persia. The former, with their cult of Nāṣiri Khusraw, appear to be of a more moderate and rather archaic type than the works produced in Persia proper. It may be noted that in the genealogies of Ismaili Imams, especially those preserved in Badakhshan, the names of Shāh Tāhir Dakkanī, and possibly of other Imams of his line, are occasionally mentioned.² It is possible to think that the line of Shāh Tāhir, i.e. the Muhammad Shāhī Imams, had a following there, and that the peculiar literature, so different in tone and spirit from the Persian Nizari school, may partly be their creation.

In the complete absence of historical materials it is extremely difficult to find when and how their subsect in Badakhshan disappeared, or became amalgamated with the main Nizari school. Works showing the same peculiarities apparently date from the tenth, and possibly eleventh century A.H., as far as can be ascertained.

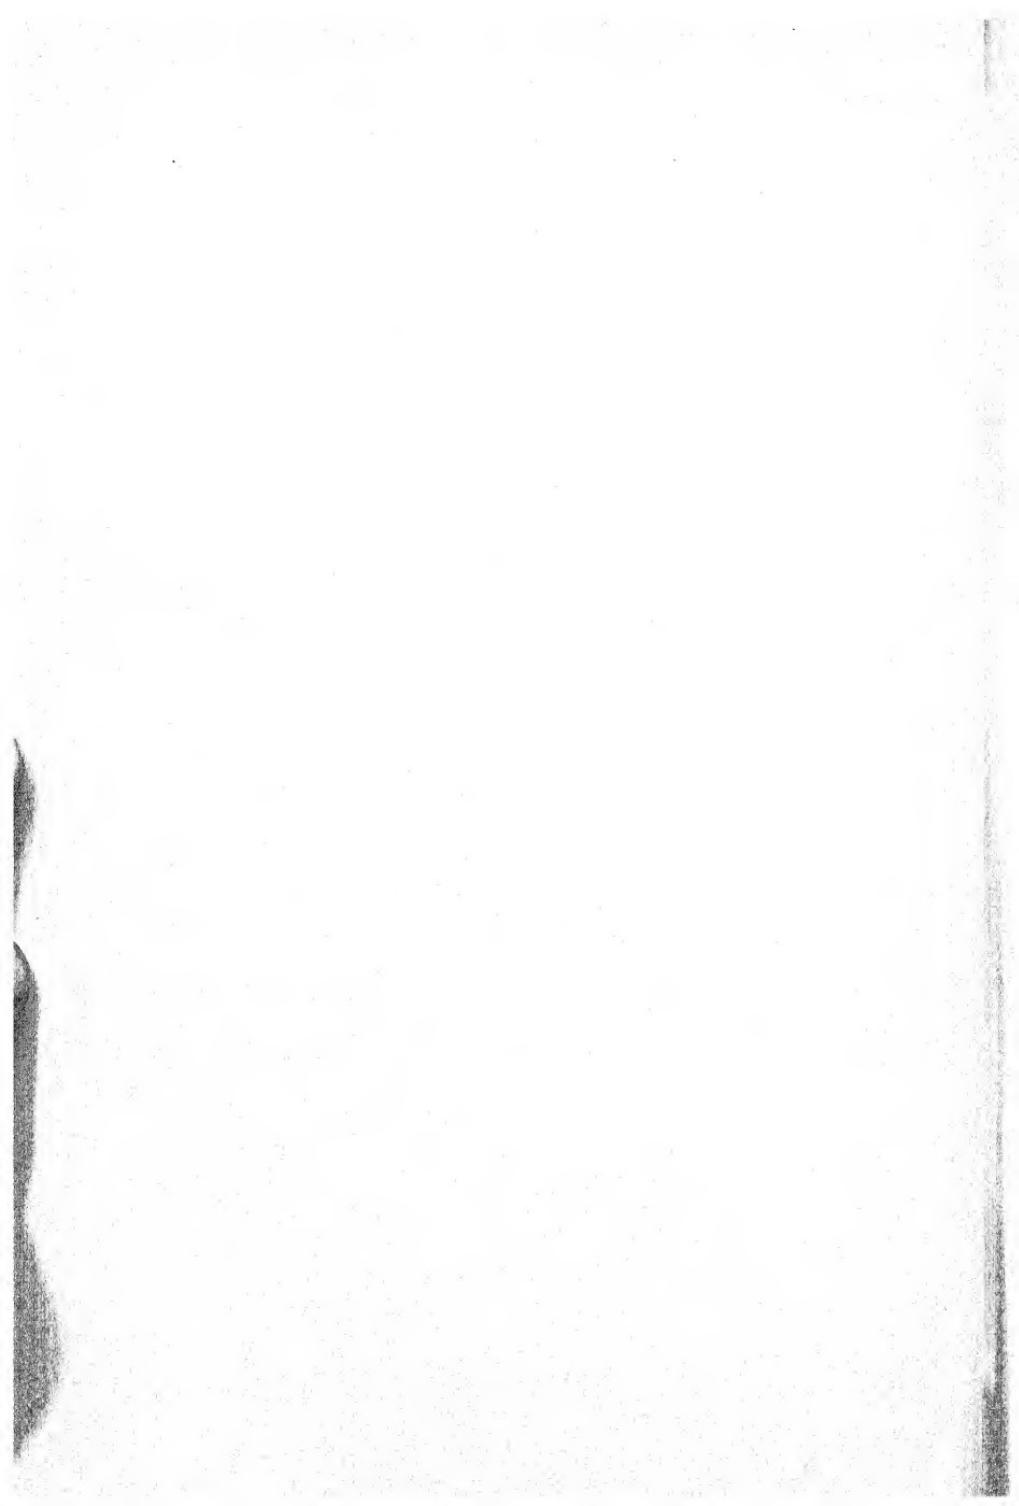

The successors of Shāh Tāhir in India most probably lost all their former importance with the conquest of the Deccan by the sultans of Delhi. Later on the intolerant policy of

¹ See pp. 12 sq. As the book was compiled long before I found the *Irshādūt-tālibīn*, I never suspected at that time the existence of a separate sub-sect, of the "Muhammad-Shāhī" Nizāris, and therefore wrongly placed the *Lama'ātu-t-tāhirīn* amongst the works of the Persian Alamūti school, which now may be called "Qāsim-shāhī" (No. 665, on p. 111).

² In the history of the Ismaili Imams, composed by Muhammad b. Zaynī'l-‘ābidīn Khurāsānī, which is being prepared for publication by A. A. Semenov, of Tashkent, Shāh Tāhir is regarded as the same as Shāh Muhammad b. Islām Shāh b. Qāsim Shāh, which is quite fictitious. Cf. A. Semenov, "An Ismaili Ode glorifying the Incarnations of Ali-God", in the *Iran* (Leningrad), ii, 1928, p. 21 (in Russian). Mu'min Shāh, mentioned by the *Irshād*, is very often referred to in the genealogies from Badakhshan. It is quite probable that references to them could be multiplied if more of Persian Ismaili literature should be available.

Aurangzib most probably dealt a death blow to their sect. It would be extremely interesting to find what ultimately happened to these Imams; was their line discontinued through the absence of a legitimate successor, or they "went into concealment"? It is quite possible that their followers in India had to observe strict *taqiyya* and, left without guidance, ultimately became genuine Sunnis. In Badakhshan their followers became isolated from both Persia and India, being separated by the States under fanatical anti-Shi'ite rulers, such as the Shaybanids in Northern Afghanistan, etc. When later on communications became safe, after the British occupation of India, and Russian conquest of Central Asia, they could only discover that the Muhammad-Shāhī line had become extinct, thus proving, from the point of the Ismaili beliefs, that it was not genuine.

Note.—Since this article was set in type, the author of it had a chance to visit the Syrian Ismailis, whose real tenets were so far kept secret. It appears that the Ismailis of Masyaf and Qadmus, with a few surrounding smaller villages, belong to the "forgotten branch" dealt with in this paper.

MISCELLANEOUS COMMUNICATIONS

NIRMĀNA-KĀYA

In the well-known doctrine of the Three Bodies of the Buddha, the physical and earthly manifestation is called a *nirmāna-kāya*, “a body of artifice” or even more literally “a body of measurement”; a body made, then, as images and other works of art are made, by a “measuring out” (root *mā*). In the *Divyāvadāna*, ch. xxxvii, the word *nimittam* is similarly used of the Buddha’s appearance which he himself emanates and projects for Rudrāyaṇa’s painters, who cannot grasp his likeness unaided. It may be remarked that Indian imagery is always as much or more an iconometry (*tālamāna*) than an iconography; and that all this has an important bearing on the pragmatic equivalence, in Buddhist iconodule theory, of the verbal, carnal, and fictile manifestations by means of which the Buddha is presented to the world in a likeness. Our present object, however, is rather to point out what has not been generally recognized hitherto, that prototypes of the expressions *nirmāna-kāya* and *nimittam* occur already in the Brāhmaṇas and Saṁhitās.

We have, for example, *RV.*, iii, 29, 11, “This, O Agni, is thy cosmic womb, whence thou hast shone forth. . . . Metered in the Mother (*yad amītā mātarī*), thou art Mātarisvān,” and x, 5, 3, “having measured out the Bambino” (*mitvā śiśum*). The *Jaiminīya Brāhmaṇa*, iii, 261–3, is even more explicit. Here the Devas, about to undertake a sacrificial session, propose in the first place to discard “whatever is crude in our spiritual essence” (*tad yad eṣāṁ krūram ātmann¹ āśit*),

¹ *Eṣām krūram ātmānah* corresponds to *Maitri Up.*, vi., 8, *prajāpatēḥ sthaviṣṭā tanūr yā lokavatī*, “Prajāpati’s most concrete form, that which is cosmic.”

Caland translates “von unserem Körper”. It is, however, the Spirit, and not a “body”, that is the common property of the Devas: “Spirit

that is to set aside whatever are the possibilities of physical manifestation inherent in the Spirit ; which possibilities they propose to " measure out " (*tan nirmamāmahi*). Accordingly " They measured it out (*nirmāya*) and put what had thus been wiped off (*samarjam*)¹ in two bowls (*śarāvayoh*, i.e. Heaven and Earth, *dyāvāpṛthivī*). . . . Thence was born the mild (*akhala*)² Deva . . . it was verily Agni that was born. . . . He said, ' Why have ye brought me to birth ? ' They answered ' To keep watch ' " (*aupadraṣṭyāya*). Similarly in the *Gopatha Br.*, i, 1, the Brahman-Yakṣa, being alone, reflects, " Let me measure out a second God of like measure with myself " (*manmātrām dvitīyām devām nirmame*) ; this second God, Atharvan-Prajāpati, is instructed to emanate and care for creatures, ib., i, 4.

Here then Agni-Prajāpati's embodiment in the world is already a *nirmāṇa-kāya*, a factitious body of measurement. That Agni is to " keep watch " corresponds on the one hand to the Vedic conception of the Sun as the " Eye of the Devas ", and on the other to that of the Buddha, described in the Pali texts as the " Eye in the World " (*cakkhum loke*), cf. *Kathā Up.*, v, 11, " the Sun, the eye of the whole world " is the whole property of a Deva " (*ātmā sarvām devasya*, *Nirukta*, vii, 4). What the Devas transfer to the realm of measurement are the Spirit's possibilities of formal manifestation.

A confusion of the Spirit with the bodily self is described in *Chāndogya Up.*, viii, 8, 5, as a " devilish doctrine ". " Body " and " field " are alternative expressions (*idam śarīram . . . kṣetram*) and the " field " is described as all that we nowadays mean by " body and soul " (*Bhagavad-Gītā*, xiii, 1 and 5, 6) : with what bitter sarcasm Śaṅkara then, commenting on ib., xiii, 2, remarks of such " learned " pandits as those who say " I am so and so " or " This is mine ", that " Their ' learning ' consists in regarding the field itself as their Spirit " . . . *idam tāt pāṇḍityām, yat kṣetra eva ātmadarśanam!* Many a modern scholar's " learning " is of this sort.

¹ It is in the same way that Indra's young mother (*yurati*) thinks him " unspeakable " (*avadyam*) and abandons him (*parāsa*), *RV.*, iv, 18, 5-8, and that in v. 2, 5, Agni is pitied as a " mere mortal " (*maryakam*), cf. x. 72, 8, 9, where Aditi " casts away " the mortal Sun unto repeated birth and death.

² With reference to Śiva. It is really the embodiment of Rudrāgnī that is spoken of. The later assimilation of the Buddha to Śiva is by no means without good reasons.

(*sarva-lokasya cakṣus*), and similar older texts. We can, however, go farther. Māyā, the principle of "magic" by which the world is natured (*māyā-maya*), and *māṭrī*, "mother," "matrix," are likewise from root *mā*, "to measure". Who else, indeed, than the Magna Mater in whom the divine child is "measured out" and in this way "formed", has full right to be spoken of as Māyā-devī? The origin of this name of the Buddha's mother can be followed backward from the later Buddhist sources to the *Rgveda*. The Buddha's temporal mother, who is, of course, the earthly counterpart of the eternal Magna Mater, in the same sense that "Mary in the flesh" is the counterpart of "Mary ghostly", "was herself called 'Māyā' distinctively because her own appearance had as it were been measured out by Māyā" (*māyā-nirmitam iva bimbam māyā-nāma-saṁketā*, *Lalita Vistara*, Lefmann, p. 27, 1, 12). Very closely related to this is *Atharva Veda*, viii, 9, 5, "Bṛhatī, the measure (*mātrā*), was measured out (*nirmitā*) from the maternal-measure (*mātrāyā mātūr...adhi*), Māyā was born of Māyā, and Mātālī (= Mātariśvān) from Māyā." This points directly to the idea expressed in *RV.* iii, 29, 11, and x, 5, 3, quoted above. All that the *Lalita Vistara* adds to the concept of the Buddha's *nirmāṇa-kāya*, created, factitious, or iconometric body, is the perfectly logical, and, as we have seen, traditionally entertained presumption that the temporal Theotokos is herself a *nirmitam bimbam*, a created and iconometric likeness—in the sense of Augustine's "I made myself a mother, of whom to be born" (*Contra V Haereses*, 5). We need only add, without pursuing the matter in detail, that similar conceptions are to be met with in Christian theology, where creation and generation are one and the same act of being *in divinis*: it is thus, for example, that in John i, 4, *quod factum est*, "What was made" (by the divine art), replaces the Greek ὃ γέγενεν, "What was begotten."

There does not appear to be any sufficient ground for equating the Buddhist doctrine of the *nirmāṇa-kāya* with

the docetic heresy. The “created” body has surely the same degree of “reality” as that of other created things, and particularly, the same degree of reality as that of the world itself, also traditionally thought of as brought into being by a “measuring out” (root, *mā* with *vi*) ; as in *RV.*, v, 85, 5, where it is Varuna’s “mighty Magic” (*māyā*) that he “measured out the earth” (*vi yo mame prthivīm*), x, 71, 11, where it is the measure of the sacrifice that is “measured out” (*yajñasya mātrām vi mimīte*), i, 110, 5, where the “field” is measured out (*kṣetram iva vi mamuh*), and many passages in which it is a question of measuring out the “atmosphere” (*antarikṣa*) or “spaces” (*rajānsi*), i.e. of creating the worlds. Whatever “reality”, then, attaches to the magically natured (*māyā-maya*) world attaches equally to the magically natured factitious or created body of the Buddha, born of Māyā. If there is also postulated in the Indian tradition a “real of the real” (*satyasya satyam*), that is to say a higher reality than that of the created world or that of anything manifested in it, even this does not involve a docetism, but corresponds to Augustine’s point of view when he says that “Compared to Thee, these things are neither good, nor beautiful, nor are at all” (*nec sunt, Conf.*, xi, 4). But we are not at present concerned with the problem of degrees of reality ; the point is that the *same* degree of reality attaches to the world and to the Buddha’s iconometric manifestation in the world, where, as it is expressly stated, it is in accordance with his command of all convenient means (*upāya*) that he appears to those whom he would teach in their own likeness—as Augustine says again, *Factus est Deus homo ut homo fieret Deus*.

ANANDA K. COOMARASWAMY.

BALĀDURĪ AND HAMZA İSFAHĀNĪ ON THE MIGRATION OF THE PARSEES

In my examination of the tradition relating to the migration of the Parsees to India, in connection with the condition of the Muslim world in the middle of the seventh century, I have

noted the account given by Balādūrī (ed. De Goeje, 392), who states in his narrative of the conquest of Kirmān by the Arabs that a number of the Parsees sailed away in ships over the sea, i.e. in the direction of India.¹ My point of view on this subject, as generally on all the materials which we possess relative to this question, I have formulated before: here I would merely reiterate that this account consists of two words only, unaccompanied by further explanations, of which one may be said to be obscure.² Similar accounts in an expanded form exist in Arabic literature, and I think that it may be useful to give the following extract from an Arabic writer of recognized authority, albeit of later date—Yāqūt, who, in his famous *Geographical Dictionary* (ed. Wüstenfeld, iii, 31), has the following under Subudān:—

“*Subudān*. Hamza ibn al-Hasan relates the following. Four *farsakhs* from Baṣra is the town Ubulla³ on the shore of the Crooked Tigris (sc. *Shaṭṭ al-‘Arab*)⁴; the inhabitants of this town were Persians, labouring on the sea. When the Arabs came near them, they loaded 400 ships with as much of their possessions as possible, and with provisions, and sailed away. When they were off the harbour of the town of Subudān, the wind drove their ships from the sea into this haven: they disembarked at Subudān, and there constructed fire-temples; there their descendants have lived ever since. And I (sc. Yāqūt) say: I do not know where this place Subudān lies, and, God willing, I will make researches about it.”

This account is given in the words of Hamza ibn al-Hasan, who is none other than the well-known Arab historian Ḥamza Isfahānī. He and Balādūrī were approximately

¹ Cf. *Journal of the Cama Oriental Institute*, i, 1922, 41.

² In the literature of this subject very great significance was given, rather precipitately, to this account by W. Barthold; a more cautious statement was made in the pages of the *Journal of the Cama Oriental Institute*, i, 33.

³ Under this word (عَبْلَة) Yāqūt promises that he will later give information about Subudān.

⁴ دجلة الوراء

contemporaries, living at the end of the ninth to the beginning of the tenth centuries.

In interpreting this account we must above all give our attention to the name of the town, Subudān. This is the result of a misconception on the part of Yāqūt, a fact which, in the case of such a well-informed and critical author, gives the impression that all that is related about this place is unauthentic. I think that we have in this name an incorrect reading, due to an earlier error or mutilation, resulting in changes of diacritical points and vocalization. In place of سُبُدَان, I read Sindān, a better-known place, which is mentioned by the same Yāqūt in another passage (iii, 165)¹: there it is described as a town in India, in Cutch, and confused with Sanjān in the Konkan, the town which is known from the *Qisse-i Sanjān* as the first place of settlement of the Parsees after their advent to India.² This confusion also indicates the want of clarity in the account, and its lack of authenticity.

In view of the story of the emigration from Ubulla contained in this account, the time of the emigration is fixed as contemporaneous with the Arabic conquest, as it seems, viz. the middle of the eighth century. This corresponds with Balāduri's account, but with this essential difference, that Balāduri describes the emigration as having taken place from Kirmān (as is related in the *Qisse-i Sanjān*), whereas Hamza states that it took place from Shatt al-'Arab. Extremely doubtful is the number of the ships (400: in the *Qisse-i Sanjān*, only one ship): it is difficult to imagine that at that period so great a number of ships should at short notice transport a corresponding number of inhabitants with their families. But it is of undoubted interest that in this account, dating from approximately the beginning of the tenth century, we

¹ The pointing may result from confusion with the name of another town—Māsabadān, on which see Yāqūt, iv, 393, and other more ancient Arab geographers.

² See Sh. H. Hodivala, *Studies in Parsi History*, 88.

should find mention of the presence in this town of descendants of the emigrants, with their fire-temples. The account is not clear, but from its contents we may with certainty conclude that it was known in the Muslim world at this time that the descendants of the Sasanian emigrants, together with their religious insignia, existed outside the confines of Persia, and particularly in India. And more—the account relates that bad weather (wind, whirlwind) drove the ships into the haven of this town : so also in the *Qisse-i Sanjān* it is related that the Parsees landed after a great storm, which they weathered when they were already between Diu and the mainland.¹

From the critical point of view we must describe this account of the migration from Ubulla as unauthentic. But its relation dates from the tenth century (it is impossible to doubt the exactness of Yāqūt's extract) : and, short as it is, it gives us a clue similar to that contained in the later, but much more detailed, account in the *Qisse-i Sanjān*. The tradition, of migration after the Arab conquest, is the same, and importance attaches to these obscure traces from this consideration.

C. INOSTRANTSEV.

ZARATHUSHTRA, VISHTASPA, AND SOME ARABIC ARCHÆOLOGICAL ACCOUNTS

Tabarī (*Annales*, i, 2448), in his account of the capture of Madā'in-Ctesiphon, the capital of Sasanian Persia, in describing the booty which was taken by the Arabs, writes as follows :—

“ And there (they found) two vessels (of a special kind). In one of these (was found) a horse made of gold, with saddle, tail-band and collar of silver, and in the silver were set gems and emeralds, and the bridle was similar ; and (on this horse) was a horseman made of silver covered with precious stones. And in the other (was) a she-camel made of silver with saddle-girth of gold, and helm or rein of gold, and all these were set

¹ See Hodivala, op. cit., 101.

with gems ; and on this (she-camel) was a man made of gold covered with precious stones.”¹

These objects, which were in the Treasury of Chosroes, are related, in my opinion, to the original ideas of ancient Iranian history and of the religion of Zoroaster. As is well known in the literature of the subject, the name of the prophet—Zarathushtra—and the name of his protector, the King—Vishtaspa—are etymologically significant. The second parts of these names have definite meanings : “ ushtra ” signifying “ camel ”, and “ aspa ” “ horse ”; but whereas in the name of the King the interpretation of the first part is definite, “ Vishtaspa ” signifying “ one who has swift horses ”, or “ the swift-horsed one ”; in the name of the prophet the first part is subject to different interpretations. One of these interpretations is connected with the idea of “ gold ”. The above-mentioned description of two representations—those of a man on a she-camel and a man on a horse—bears an obvious relation to the names of these two personalities, and I am inclined, therefore, to see in these two objects the representations of Zarathushtra and Vishtaspa. The only doubt comes from the materials from which the representations were made : the man on the she-camel was made of gold, and the horse also ; the man on the horse, and the she-camel being silver. If the first part of the prophet’s name is etymologically related to the idea of “ gold ”, one would expect the camel to have been of gold—whereas in the work of art the camel is of silver. But it is possible that, in this case—that is, in works of art which *combined* the use of both materials—the prerogative was given to the Prophet ; *his* figure was made of gold, that of Vishtaspa of silver. In any case it seems to

فإذا سلطان في أحدهما فرس من ذهب مسرج بسرج من فضة على ثقيره ولبيه ^١
والياقوت والزمرد منظوم على الفمه ولجام كذلك وفارس من فضة مكمل
بالمجوهر وإذا في الآخر ناقة من فضة عليها شيل من ذهب ويطان من ذهب
ولها شناق او زمام من ذهب وكل ذلك منظوم بالياقوت وإذا عليها
رجل من ذهب مكمل بالمجوهر .

me to follow that already in the Sasanian epoch this name was etymologically connected with the concepts of "gold" and of "camel"—irrespective of the correctness or otherwise of the etymology which connects the name of the Prophet with the concept of "gold". That this idea has found expression in monuments of art, we can see from another similar description by an Arabic historian, with which we conclude. Dinawarī (ed. Guirgass, 135), in his narrative of the battle of Qādisiyya and of the booty taken by the Arabs, relates as follows: "Hāriqā-ibn-āṣ-Ṣalt found in one of the tents a she-camel made of gold, decorated with small pearls, pearl-solitaires and gems; on this she-camel was a representation of a man, made of gold; in size (this she-camel) was as a little gazelle."¹ In this representation, which was handed over by the finder to the officer in charge of booty, we now find both the man and the she-camel made of gold.²

C. INOSTRANTSEV.

A BISTĀMĪ-LEGEND

Brockelmann, *G.A.L.* Erster Supplementband, p. 353, mentions a *Kitāb Masā'il al-ruhbān*, ascribed to the famous Ṣūfī Abū Yazid al-Bistāmī, of which a copy is preserved in the Āṣafiyā Library in Hyderabad. (Two other copies of the same work, one in Hyderabad and one at Istanbul, are

واصا ب خارجة بن الصَّلت ف فسطاط من فساطيطهم ناقة من ذهب موسعة ^١
باللؤلؤ والدر الفارد والياقوت عليها تمثال رجل من ذهب وكانت على كبر
الخُلُبة .^٢

² Some Arab writers (e.g. Ibn-al-Faqih, *Bibl. Geogr.*, v., 178 (quoted by J. Goldziher, *Muhammedanische Studien*, ii, 361)) state that on Persian carpets and vessels (these objects are specially mentioned) the representation of the eminent King Bahram-Gür was always mounted on a camel; from this it may be argued that the latter figure represents this King; but, having regard to the above-quoted passage from Tabarī, it is better, in my opinion, to see in it a representation of Zoroaster.

recorded ibid. *Nachträge*, p. 954.) Through the kindness of Dr. Stapleton I have obtained a copy of the Hyderabad manuscript (described in vol. i, p. 388, of the *Āṣafiya catalogue*), and this transcript is now deposited in the India Office Library, under the serial number 4585.

On examination, this work proves to be identical with the "erbauliche Geschichte" described by Ahlwardt, *Verzeichniss der arabischen Handschriften . . . zu Berlin*, viii, p. 49, nos. 9057-8. It also appears to resemble the "simple bluette apocryphe" contained in MS. Paris 1913, ff. 195-6, for which cf. Massignon, *Essai sur les origines*, p. 245. The legend, which is put into the mouth of Abū Yazīd himself, relates how, in obedience to a heavenly voice (*hātif*), the saint visited a Christian monastery at سمعان دیس, dressed in the garb of a monk. The monks were assembled to listen to a discourse from their abbott (*kabīr*), and Abū Yazīd stood with them: the abbott, however, could not make his address, and explained that he was prevented from doing so by the presence in their midst of a Muhammadan (*rajul Muḥammadi*), who had come to spy on them. The monks said, "Show him to us, that we may slay him." The abbott, however, declared that he only wished to question him on certain matters relating to religion; if he were able to answer him, then he might go free, but if not, then they should kill him. Thus challenged, Abū Yazīd disclosed himself. The abbott then proposed a series of seemingly nonsensical questions—"What is the one that has no second, the two that have no third, etc.? Who were the people who lied and were admitted to Paradise, and the people who told the truth and were admitted to Hell? Where in the body does the name reside?" etc., etc. Abū Yazīd answers all these questions successfully, giving them a religious significance; and so confounds the monks that they one and all renounce their girdles and become Muslims.

Such is the legend, and it may be conjectured that it is abstracted from some fairly late compilation on the *manāqib*

of al-Bistāmī.¹ Such more or less fanciful biographies of early Sūfis are not uncommon² and it is to this genre that the tractate under discussion appears to belong.

376.

A. J. ARBERRY.

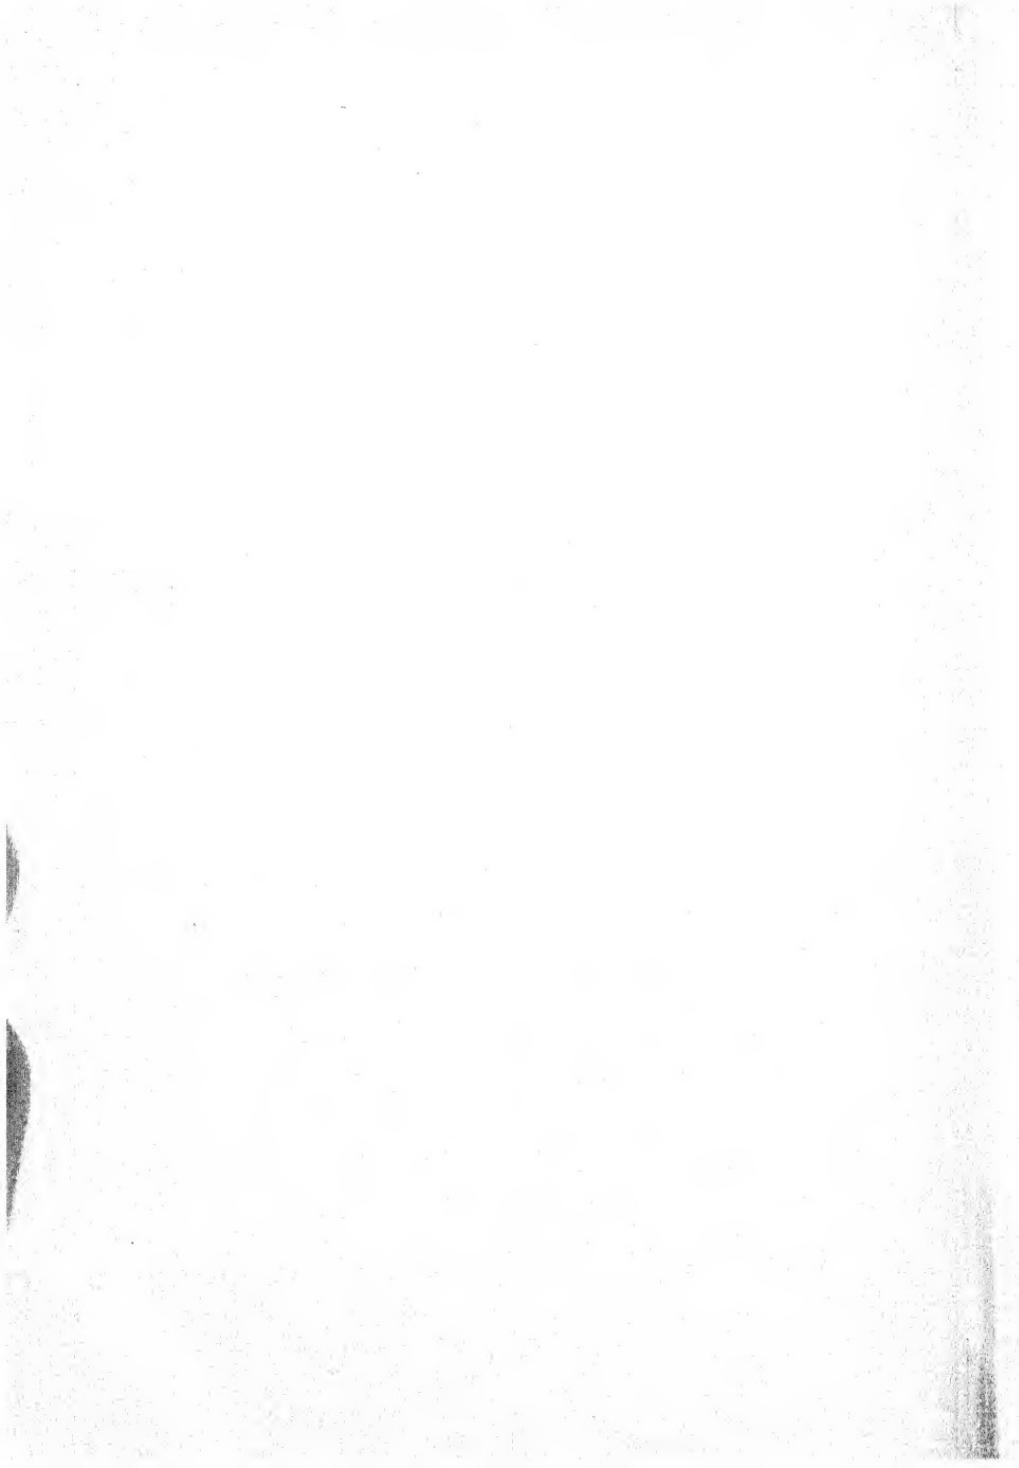

¹ Such a work, in Persian, is mentioned by Hājjī Khalifa, vi, p. 152, no. 13022, cf. Massignon, op. cit., loc. cit. A *Magāmāt i Shaikh Bā Yazid i Bistāmī* is referred to by 'Aufi in his *Jawāmi' al-hikāyāt*, see Muhammad Nizāmu 'd-Din, *Introduction . . .*, pp. 144, 225. It is significant that the anecdote does not occur in any of the early authorities, nor even in 'Attār.

² Cf. H. Kh., vi, pp. 151 ff. Brockelmann, op. cit., p. 353 (*Dhū 'l-Nūn*). A story of the conversion of a group of Christian monks to Islām by the Caliph 'Alī is told in Ahlwardt, op. cit., viii, p. 35, no. 9023.

A COMPENDIOUS URDU DICTIONARY

(*Jāmi' ul Lugāt*)

A note on this dictionary written by Dr. Grahame Bailey was printed in *JRAS.*, 1937, Pt. II, pp. 316-18. Unfortunately the usual reference was omitted from Contents of Part II, and Index and Contents for the year.

REVIEWS OF BOOKS

Near East

LA CONFESIONE DEI PECCATI. By R. PETTAZONI. Part II,
Vol. 3. *Storia delle Religioni*, No. 12. $7\frac{1}{2} \times 5$, pp. x
+ 294, chart 1. Bologna : Nicola Zanichelli, 1936.
L 25.

This, the concluding volume of the work, contains 151 pages of text, 69 of notes, and 74 of index to the whole. It deals with Syria, Asia Minor, and Greece, or rather some of the Greek Islands. The conclusion reached is that confession of sins belongs to the worship of the Mother Goddess in Asia Minor in prehistoric times. From there it spread to Syria and became part of the ritual of Atargatis. In the Amarna tablets the phraseology of religion has been borrowed by the language of diplomacy, giving such expressions as "I confess my sins to the king". A Hittite king made public confession of his father's sins to remove a pestilence due to them. In Hellenistic times the rite of confession is found in out of the way places in Asia Minor and in private cults, usually connected with a goddess who is some form of the Great Mother. The rite is also found in Samothrace, which was an asylum. It was also familiar to Ovid, Juvenal, and Epicurus. Some phrases in Virgil suggest that it had been taken over into the Orphic ritual. It may have been part of the initiation into the mysteries but not of the mysteries themselves. The book is well written and it is easy to control the author's statements if one has a big library.

A. 615.

A. S. TRITTON.

THE QUARTERLY OF THE DEPARTMENT OF ANTIQUITIES IN PALESTINE. $10\frac{3}{4} \times 8$. Vol. V, pp. 214. Vol. VI, 1, 2, pp. 98. Jerusalem: Published for the Government of Palestine by Humphrey Milford. London: Oxford University Press, 1935-6.

This admirable quarterly, published under Government auspices, gives a full account of the work that is being furthered and encouraged by the Department of Antiquities. To those who are not acquainted with the extent and quality of modern archæological research the range of history and prehistory covered by workers in this field will afford an excellent idea of its value. The good summary of excavations in Palestine in 1934-5 may profitably be consulted in vol. v, pp. 194-210; it is followed by a bibliography (pp. 11 sq.). Naturally a publication of this sort is difficult to review, and one must content oneself with a rough chronological list of the main contents. Starting with the excavations at Rās el-'Ain (J. Ory and J. H. Iliffe), we note that the pottery has many interesting features illustrating the Early and Middle Bronze Periods (vol. v, pp. 111 sqq.). In a careful article W. A. Heurtley investigates and discusses the relationship between "Philistine" and "Mycenæan" ware; the historical implications are duly noticed. Descending a few centuries we reach a homogeneous hoard of bronzes from Askalon of about the fourth century B.C. (Iliffe, pp. 61-8): the Egyptianizing style is noteworthy. To the same writer we owe an essay on potters' stamps in the Near East (vi, 4-53), a valuable piece of work that will be welcomed by all who have to deal with pottery. Mr. Iliffe points out, *inter alia*, that the old doctrine, that sigillata wares were never made in Britain but were imported from Italy and Gaul, was demolished only two years ago, it was an example of the dangerous argument *ex absentia*.

Sir George Hill discusses, on the basis of some fresh evidence, the shekels of the First Revolt of the Jews (vi, 78-83); and Mr. Iliffe is fortunate enough to be able to publish the fragment

of a second copy of the well-known Greek inscription in the inner court of the Temple of Herod, forbidding strangers to enter (vi, 1-3). Admirable also is the monograph by Mr. M. Avi-Yonah on the map of Roman Palestine (v, 139-193 and map). Mr. E. T. Richmond writes on the Church of the Nativity at Bethlehem (v, 75-81; vi, 63-72). Mr. D. C. Baremki describes (*a*) the contents of two Roman cisterns at Beit Nattif (v, 3-10)—a swastika may be noted among the symbols on the lamps (plate vii, 1, 2); (*b*) an early Byzantine basilica at Tell Hassān in Jericho (v, 82-88); and (*c*) an early Byzantine synagogue (vi, 73 sqq.). Mr. S. A. S. Husseini reports the discovery of an unfinished monolith in Jerusalem (v, 1 sq.) and a rock-cut tomb-chamber at 'Ain Yabrud (vi, 54 sq.).

A discovery of some importance is that of two superimposed mosaic pavements at el-Hammām, Beisan, since, as Mr. Avi-Yonah points out, it is thereby possible to form some conception of the development between the two (v, 11-30). Mr. N. Makhouly describes the basalt seats of the Roman and Arab periods found at the el-Hamme hot springs (vi, 59-62). The Crusading period is illustrated by the stables at the Pilgrims Castle at 'Atlit, described by Mr. C. N. Johns (v, 31-60); and the same writer contributes an interim report of the excavations at the Citadel in Jerusalem, which proves to have had a much longer earlier history than had been suspected (v, 127 sqq.). Finally, an account of Evliya Tshelebi's travels in Palestine is translated by Mr. St. H. Stephan with notes by Mr. L. A. Mayer (v, 69 sqq.; vi, 84 sqq.).

TOMBES DE DEIR EL-MÉDINEH. LA TOMBE DE NEBENMÂT (No. 219). By CHARLES MAYSTRE. L'Institut français d'Archéologie Orientale du Caire, Tome LXXI. 14 × 11, pp. viii + 40, pls. 9, figs. 5. Cairo : Imprimerie de l'Institut, 1936.

The work is carried out in a careful manner and thoroughly well documented, so that it may be regarded as an exhaustive survey of what is known of the tomb. It should be of infinite use as a work of reference. The author states in his preface that the chief characteristic of this work is the detailed index. This he has certainly very successfully compiled, but it is our opinion that the work would have been much improved if a translation of the hieroglyphics had been included. Without this translation the work can indeed be of help and interest only within the small circle of those who read hieroglyphics. Moreover, a more lengthy description of the tomb would have been an advantage, and the work also suffers from the fact that no description of the very varied and interesting painted scenes is provided. Line drawings containing certain suggestions for the restoration of parts wanting would certainly have been a valuable addition, especially in cases such as scenes 1–18. It must be noted, however, that the photographic plates are extremely well produced. The work can be thoroughly recommended to students of the subject and period.

A. 719.

JOHN ROBERT TOWERS.

THE RAS SHAMRA MYTHOLOGICAL TEXTS. By JAMES A. MONTGOMERY and ZELIG S. HARRIS. Memoirs of the American Philosophical Society, Vol. IV. 9½ × 5½, pp. 134. Philadelphia : The American Philosophical Society, 1935.

This is an extremely useful and valuable work the object of which is to introduce the mythological texts recently found at Ras Shamra to the wider circle of Hebrew students. The texts are transcribed into Hebrew characters and are prefaced

by introductions dealing with their discovery, their script, their language, their contents, and their literary form. There is also a fairly exhaustive bibliography of specialized studies, and at the end of the volume there is a Glossary-Concordance embodying the editors' interpretations. This last serves in place of translation or detailed commentary, but confines itself to the bare meanings of the words without considering full explanations of the poems on the mythological, cultural, and religious sides. The work is conceived pre-eminently as an introductory textbook, and aims rather at furnishing the student with reliable material than at presenting the editors' own construction of it.

In the section on language the editors elect to describe the Ras Shamra dialect as "Early Hebrew" rather than as "Canaanite", "Saphonian", "Ugaritic", or "North-West Semitic", as preferred by other scholars. They observe that it is an earlier stage of the language found in the Old Testament. This accords with the reviewer's conclusions in *JRAS.*, 1932, p. 858, but it should be remarked that the choice of the term "Hebrew" has a further advantage. Hebrew is essentially a mixed language, made up of several dialects, and it is just this heterogeneity which characterizes the speech of the Ras Shamra texts. There, however, we still find the influence of the South predominant, which means that the language took shape in days before the Semitic nomads were finally settled in the North and subjected to the dominant influences of that area.

Especially valuable is the section dealing with the literary form of the poems. In accord with Dr. Harris's previous study in *JAOS.*, 1934, pp. 80-3, a strophic arrangement is maintained. The editors might here have considered the possible origin of such forms in the exigencies of dramatic production, for it can be shown that the Ras Shamra poems are simply the mythological *libretti* of sacred pantomimes.

The most important part of this work is, naturally, the Glossary. This suggests new meanings for several difficult

words and phrases, at the same time preserving what is perhaps an excess of caution in fixing the signification of others. In view of the quite exceptional value of this Glossary, a few detailed criticisms might perhaps not be out of place.

The explanation of the smith-god's name, Hiyan, as from Syriac *hw̄n* "be handy" is attractive, but the final *an* may just as well be nunation, as in Aleyan, Latpan, etc.

The detection of a vocative prefix *l-* illuminates several obscure passages, and is most ingenious, whilst the suggestion that *pl* in I *AB.*, iv, 25, 26, 36, 37, means "fail, dry up" (from the Arabic) is undoubtedly right.

I append some detailed observations on the lexicographical side:—

a-h-d, of constructing a building (*B.*, iv, 60); cf. As. *sabātu* and *a-h-z* in *Zenjirli*, ii, 11.—*a-m-t* (*A.*, iv, 43): cannot be As. *amatu* "word", since this is really *awatu* and thus equates with *hw̄t* parallel to *amr* in *B.*, i, 43.—*bt ar*, as name of temple: cannot be "house of light", since "light" is written *er* in 1929, vi, 25.—*u-r-t* (*A.*, iii, 19; *B.*, v, 67): not Assyrian *irtu* "breast", but internal plural of *rt* "lung", as in Arabic and late Hebrew.—*A-r-š*, name of a sea-monster, in *A.*, sup., ii, 14: no connection with Heb. *a-r-š* "desire", but perhaps cf. As. *aršanu* "mighty", etc.—*U-š-h-t*, name of deity (1929, xvii, 9): pronounce *Wašhat*. The word is a Semiticization of an Asianic name, for cf. Hattic *wašha-*, Kassitic *wašha-*, and Tcherkessic *wašho* "god".—*b-s-* (of feasting) in *D.*, i, 21, is the Neo-Hebrew *b-s-* "break bread".—*Gad*, the Phoenician god of luck, does not occur, for 1932, i, 10, is to be read: *bgd Spn kl Ugrt* "they pillage the North-land, make an end (i.e. *killu*) of Ugarit", whilst in 1929, v, 7, . . . *lgd* is the end of a Hurrian name, with suffix *-d*.—*dbḥ tdmm amht*, coupled with *dbḥ dnt* "sacrifice of whoredom" in *B.*, iii, 20, 22, means "sacrifice wherewith goes lechery on the part of the hierodules", *tdmm* connecting with Hebrew *zimmah*, etc. (v. *JRAS.*, 1935, p. 41).—*d-m-r* in *B.*, vii, 39, means "protect", as in Arabic and S. Arabian, not "be awesome". We may see a Hebrew cognate in *zimrah* of Exodus xv, 2, usually rendered "song", i.e. "Yahweh is my stronghold and protection".—*h-d-y*, an action done to cheeks and chin as a sign of mourning (*D.*, vi, 19; *A.*, sup., i, 3): clearly the Arabic

hdd, etc., “break, tear, rend,” like Hebrew *gd'* *zqn*, rather than “present”, which gives no sense!—*H-b*, the abode of Mot in *B.*, viii, 13: M.-H. interpret “*Habhu* in Cilicia”. Is it not rather the Arabic and Ethiopic word for “hole, crevice”, i.e. “the holes in the earth” (cf. our note *OLZ.*, July, 1936)?—*lyptr*, a sacrificial object (*B.*, ii, 8): cf. the ritual *hupatar* in the temple-inventory from Qatna, 1, 4 (cf. our note *OLZ.*, Sept., 1935).—*Hr* (1929, v, 1, 5) cannot be “Horus” in view of the hard guttural (v. our note, *Ancient Egypt*, 1932, p. 106).—*msdt ars* in *B.*, i, 41, does not mean “foundations of the earth”, because *msdt* denotes at most the *pillars* on which the earth rests. We must read *ms dt ars* “tribute of the land (earth)”.—*k-l-l*, of constructing a shrine (*B.*, v, 72), scarcely means “wall about” or “complete”, despite the S. Arabian parallel; it is more probably a Pi'el cognate to Aramaic *Shaf'el s-k-l-l* and Assyrian *ušakti'l* of *building* a house.—*rbt kmn* in *B.*, v, 86, etc., is certainly not the “temple-name”. It is parallel to *alp šd* “ox of the field”, so that *rbl* is probably the Syriac and Arabic *rbbt* “domestic beast” and *kmn* may be Assyrian *kamatu* “pen, stall”.—*m-h-m-r-t*, of the underworld abode of Mot, is explained by Talmud Jerushalmi, *Moed Katan*, i, 80c: “at first they used to bury convicts in *mhmrt*, when their flesh was consumed, they buried them in shrouds (or coffins?)”.—*n-p-r*, as a parallel to “birds” in *A.*, ii, 22, is an Arabic word for “thing on the wing, sparrow”.—*n-s-b-t*, in conjunction with *s-l-m* (“peace-offering”) and *h-n-n* (“propitiatory offering”) in 1932, i, 7, is not “statue”, but is a good Arabic term for “statutory offering” (v. Wellhausen, *Reste*, p. 121, n. 2).—*n-s-b* in *B.*, vi, 35, is surely from Aram. *n-s-b* “take”, rather than from *s-b-b* “change, exchange” (what authority?).—The rubric *wšb lmspr* (“then return to the passage, narrative . . .”) is an imitation of the Egyptian *ts phr* of this meaning. ‘-d’ in *C.*, 12, cannot possibly mean “eternity”. The ‘d’ on which the images of the moon (*yrhm*) lie is the cultic table-stone; on this word v. our note *OLZ.*, July, 1936. Similarly, in *A.*, sup., vi, 47, 48, ‘-d-k’ means “around thee” (cf. Ethiopic) being parallel to *thik*, i.e. “where thou art”.—The note on the divine name *Pdry* needs revision. There is no such thing as an “Anatolian Pitṛ”. The word connects with Urartean *padari*, etc., “city” and means primarily “God of the City”. Cf. the *Ἀπόλλων Παταρεύς* (god of

Patara in Lycia, i.e. "City") of Greek authors. As for *p-d-r* there are two distinct words. The former is Urartean *padari*, Syrian Pethor, Lycian *patara*, Eteocypriotic *matore* (Bork) "city"; the latter, parallel to *ht* "sceptre" is a Sumerian loan-word *badara* "double-axe", as in Assyrian *paturru*. '*-p-r p-l-s-t* (*D.*, vi, 15) is "the dust wherein mourners roll"; cf. Micah, i, 10.—*q-n-s* of pregnancy (C. 58) has nothing to do with *k-n-s* "enter", but means primarily "enmesh"; cf. French "en-ceinte".—*elqsm* (material for sanctuary) in *B.*, v, 79, can scarcely mean "to their end", since *el* "to" nowhere recurs. I think it is an Arabism with enclitic particle *-m*, equating with *al giss* 'gypsum' (v. *JRAS.*, 1935, p. 30, n. 125).—The word *ht* in *E.*, 8, 9, means "here he is"; it is simply 3rd sing. masc. pron. *h* with emphatic suffix *-t*, as in Ethiopic and as in Assyrian, e.g. *šu-tu*. It also occurs in pl. *hm-t* in *Zenjirli*, i.

These notes are not intended to imply any criticism of the editors' exemplary performance, but are designed solely as supplementary matter which may be useful to students of this subject. Where so much has still to be discovered it is only natural that progress must come by co-operative effort. Indeed, it might even be desirable in the case of new texts like these that all those now working in isolation should actively pool their resources in the production of a definitive edition. This would seem to be the kind of thing that scholarship of the future must envisage.

The only complaint I would venture here to make is that the volume is not illustrated, for it would appear that some of the seals and other objects found at Ras Shamra do indeed illumine the texts. Thus, M. Schaeffer's recent reconstruction of a chariot group, depicting two men launching a chariot, and evidently used as a ritual object, might well connect with the subject of Text E, where the gods Kashir and Hasis launch their team against the god of the Sea.

The editors are to be warmly congratulated on a painstaking and technically faultless production.

HISTORICAL RECORDS OF RAMSES III: THE TEXTS IN
MEDINET HABU, Vols. I and II. Translated with
explanatory notes by WILLIAM F. EDGERTON and JOHN A.
WILSON. Studies in Ancient Oriental Civilization, No. 12.
 $11\frac{3}{4} \times 9\frac{1}{4}$, pp. xv + 157. Chicago : University of
Chicago Press, 1936. 22s. 6d.

The texts to which this volume is a companion appeared in facsimile in the two volumes of the Oriental Institute of Chicago, entitled *Medinet Habu I* and *Medinet Habu II*, in 1930 and 1932. The authors have done their translation and commentary with admirable thoroughness, and have now rendered clear much of what seemed hopelessly obscure at the time when the late Professor J. H. Breasted published it in his *Ancient Records of Egypt*, vol. iv, owing to the uncertainty as to the exact state of the walls upon which the texts are inscribed. With the exception of the commonest clichés, appearing regularly in certain positions and therefore repeated *ad nauseam*, every line of text in those two volumes has been translated with necessary philological comments.

Much of this material cannot be said to have a high degree of interest, the long inscriptions recording the campaigns of Ramesses III against the Libyans, the "sea peoples", the Syrians and the Nubians being, as is well known, obviously synthetic, accuracy giving place to the high-sounding phrases so beloved of the Oriental and so difficult to render convincingly into English, a tendency enhanced by the necessity of making a splendid scenic effect. But if the texts give us little accurate historical information, they are at least of value from the linguistic point of view, and the translators have certainly made the most of them, helped by the unpublished files of the Berlin *Wörterbuch*. The Egyptian index to the words discussed (pp. 153-7) provides the key to a storehouse of useful discussions and references.

I append a few suggestions on some (it must be confessed) small points, which occurred to me while working through the texts :—

Pl. 24, ll. 4-5 : *ḥškw ḥpš.f dnḥ hr-hšt.f 'wy.sn m skrw-'nhw.* Did the scribe omit *hr-hšt.f* from its proper place after *'wy.sn* and then find it necessary to insert it at the end of l. 4? The absence of the dividing line there suggests this.

Pl. 46, l. 3. The case for *sbšw hr ssd* = "shooting stars" seems very convincing. The objection of the "six stars *hr ssd* in the morning" disappears if they be understood not as a "swift-moving constellation", which is astronomically most unlikely, but as a constellation from which meteors were regularly seen to come, such as the radiant point in Leo at the present day. *Ssd* here probably conceals a causative.

Pl. 46, l. 28 : *r 'b' im.sn n Pdt-9.* "Thereof" for *im.sn* is misleading. The foreigners would boast of themselves, not of the frontiers of Egypt.

Pl. 70, l. 1 : *Ht-ś'.* Why is *hwt-* rendered in English by "Haut—" when in the *status constructus*? Dr. Breasted's "Hatsho", based on the Coptic equivalents, seems preferable.

Pl. 102, no. 68. Some further references for *B(3)km* may be Junker, *Der Ausgang der Hathor-Tefnut aus Nubien*, pp. 28, 29; Sethe, *Untersuchungen*, v, 137-8; Griffith, *Meroitic Inscriptions*, ii, p. 38.

M. F. LAMING MACADAM.

RÉPERTOIRE CHRONOLOGIQUE D'ÉPIGRAPHIE ARABE. Tome sixième. Publié, etc., sous la direction de Ét. COMBE, J. SAUVAGET et G. WIET. Publications de l'Institut français d'archéologie orientale. $11\frac{1}{2} \times 9$, pp. 228. Le Caire : Imprimerie de l'Institut français d'archéologie orientale, 1935.

The present volume of this corpus of inscriptions covers the years 386-425, and the material on which it draws is the usual variety of textiles, epitaphs, public buildings, etc. The lavish endowments of the French Institute in Cairo will doubtless suffice for the many future volumes of this work, and the careful and precise editorship of an able team of

French archæologists will continue, with the co-operation of a painstaking and accurate printing press, to produce faultless, or almost faultless, texts. Reviewers of previous parts of the work in this *Journal* have thrown doubt on its value as a historical record: to those who, like the present reviewer, are from time to time required, either officially or by friends, to supply transcriptions of seals, fabrics, inscriptions, and such like, this encyclopædia must come as a great boon, for the Arabs in general did not depart far from stock formulæ; and when they depart, the experts appear not to show any very great confidence. For example, No. 2087 is read قرأ آلاتار دستها هنزا آلاتار سنته, which might perhaps make sense if emended to ف طراز وسمها سمة; in No. 2023 is surely a misprint for.

There is little that might be said to be of "human interest", such as delights one in collections of Greek and Latin inscriptions. No. 2100 is an interesting epitaph, perhaps of a Sūfi, and perhaps foreshadowing the practice of editing a "master's" *dicta*. A comely humility is displayed in No. 2110.

A. J. ARBERRY.

HISTOIRE ÉCONOMIQUE ET SOCIALE DE L'ANCIENNE ÉGYPTE.

By G. DYKMANS. Tome i, pp. 305, T. ii, pp. 301, 8vo.
Paris: Auguste Picard, 1936.

The first volume of this work deals with the social and economic history of ancient Egypt from the beginning until and including the time of the Thinites. The second volume extends the same study to include the Old Kingdom. The purpose of the whole seems to be to present a complete picture of the economic and social life of ancient Egypt so far as our sources will permit—a picture which should guide and serve as a background of further study of the same problems in succeeding periods of Egyptian history.

In the first chapters of volume one, the author, after describing the geographical and climatic conditions of Egypt

in ancient times, gives an outline of the generally accepted reconstruction of prehistoric times in Egypt. In this reconstruction there are naturally many details on which differences of opinion exist—the question of totemism and its relation to religion, Horus and the Delta and Horus and Upper Egypt, the beginnings of metallurgy, Egypt and the Orient, especially Western Asia. On this last point, Dr. Dykmans belongs to those who emphasize the native origin of the bulk of Egyptian civilization. And on such problems the "will to believe" has much to do with our theories. Thus the author accepts the legend of Thoth's invention of writing, but not the legend of Horus' origin in Punt, and he finds it difficult to imagine early cultural relations between Egypt and Arabia, from the east via, for example, the Wadi Hammamat, but accepts the ease with which ancient Egypt could communicate with the Syrian coast. On the other hand the similarities in detail between the early civilization of ancient Egypt and Mesopotamia are so numerous and striking that a very close contact and relationship must be assumed. If the second pre-dynastic civilization were not actually imported from without, at any rate, its many contacts and similarities with Western Asian culture must be admitted. However, the author, on this question, as on all others involved, gives all sides of the argument with objectivity, omitting very little evidence of essential value.

It is in the second volume, after a chapter on chronology, that Dr. Dykmans begins the real theme of his researches. Thus, we have a chapter on agriculture, on hunting, and on fishing, with much detail and clever reconstruction. Here the author's intimate knowledge of modern Egypt stands him in good stead. A chapter on private property and the status of the individual, a chapter on minerals and metals, and one on all kinds of industries, a chapter on labour and wages, and finally one on transport and exchange, all bear witness to the care with which the author has assembled, organized, and presented the evidences of this thesis. This work and Pirenne's *Histoire*

des Institutions et du Droit privé de l'ancienne Égypte supplement one another and furnish a remarkable picture of life in the earliest period of ancient Egyptian history. In a forthcoming third volume of this work, Dr. Dykmans promises us a summarized reconstruction of the whole social, legal, and administrative superstructure of early Egyptian civilization. Then we shall undoubtedly be supplied with a full index to the rich material in this work. A very fine bibliography has already been added to the first volume, in which the Egyptologist will be guided in his search for economic and social material illustrative of Egyptian problems.

SAMUEL A. B. MERCER.

DER FRIEDENSVERTRAG ZWISCHEN VENEDIG UND DER TÜRKEI
vom 2 OKTOBER 1540. By WILHELM LEHMANN. Bonner
Orientalistische Studien, Heft 16. $9\frac{3}{4} \times 7$, pp. 44 + 7.
Stuttgart : W. Kohlhammer, 1936. R.M. 4.

Dr. Lehmann has published the Turkish original, found at Carpentras, of the treaty between Venice and the Sultan Suleiman of 2nd October, 1540, comparing it especially with the already known but faulty versions in Turkish and Italian. The treaty, which ended a three-year war, marked a fresh stage of the decline of Venetian power in the Mediterranean and of the growing friendship between France and the Porte, drawn together by their mutual enmity of the Hapsburgs. The Sultan knew well how to turn to his own account the divisions of Christendom. The author gives a detailed analysis of the treaty and discusses the commercial advantages which the Serenissima secured at the expense of her territorial hegemony in the Aegean. The Peace of 1540 takes its place in the series of similar acts between the Sultans and Christian powers, when other needs called for a momentary pause in the age-long struggle between Christianity and Islam. In this case, in spite of the treacherous revelation by the French ambassador of the concessions Venice was in the last

resort prepared to make for peace, the Republic retained many of the advantages enjoyed by her subjects in Turkish territory. The author does not discuss the reasons for the Sultan's compliance; but in the notes to his German translation of the original text he traces the course of negotiations over each clause of the treaty, and relates them to the previous Capitulations between Christian and Islamic powers. The monograph offers a useful critical contribution to our knowledge of the position and privileges of subjects of the western states within the Turkish Empire in the sixteenth century. But it should surely have been possible in so brief a work as this to have arranged the bibliography to afford a greater facility of reference.

D. M. BUENO DE MESQUITA.

Far East

TERRITOIRES ET POPULATIONS DES CONFINS DU YUNNAN.

Translated from the Chinese by J. SIGURET. 10 x 7,
pp. x + 307, maps 4. Peiping: Henri Vetch, 1937.
Leiden: Brill. 16s.

This work consists of a translation of part of a book published in Chinese at Yünnanfu, of which the two volumes appeared in 1933 and 1934. The translator has done his work well and deserves commendation for the energy which has led him to devote his hours of relaxation from official work to such a useful purpose. He correctly describes the work as one of "Kuomin Tang propaganda and information". While the propaganda object of the book and, even more, the inaccurate quality of the information given make it of little value to those requiring accurate knowledge, it is, nevertheless, a book of considerable interest.

The publication of the original shows that some Chinese have at length appreciated the importance of obtaining and

making available to the Chinese public information concerning the non-Chinese races living in regions coloured yellow on the map, even if these have in the past escaped the experience of Chinese administrative control. Until recently officers appointed to supervise outlying regions of Yünnan have been burdened with three cares: those of avoiding personal danger, of reporting occurrences in the area of their nominal jurisdiction, and of enriching themselves. Only men of poor education and standing and useless for administrative purposes in Chinese-settled portions of the province were willing to go to the frontier regions. The appearance of this volume under the ægis of the Governor of Yünnan occurred not long before the endeavour to appoint a somewhat better type of frontier official at a rate of pay higher than that previously given, but still too low to entitle the receiver, if British or Burmese, to accommodation in a Burma dak bungalow.

The intention of the original, both on the part of the authorities who gave it their blessing and of its compilers is commendable, but its incredible naiveté and the inaccuracies which characterize it throughout show that Yünnan is a long way from Nanking, mentally as well as physically. Some of these faults may be put down to the propaganda intent and self-centred Chinese bias of those who, often at second and third hand, collected the information, but far more are due to the inherent lack of scientific method from which all Chinese work on such subjects has suffered in the past. To this day no educated Chinese of modern training has become an expert in any non-Chinese language spoken in the south-west provinces, and it is only within the last few years that qualified Chinese under the auspices of the Academia Sinica have begun to collect information regarding these regions which is of sufficient accuracy to be of value. None of this information appears in the present work.

A few instances of the naiveté of the writers may be mentioned. On page 118 there is the statement that "there

may be, though one cannot be sure, dynamite cartridges under the boundary pillars", "secretly erected" ("one-sidedly erected" would perhaps be a more accurate translation) by the British; on p. 134 that "the British prevent the inhabitants from carrying dahs and owning slaves, which is most inconvenient"; on p. 154 that the Liso "are ignorant of hygiene and disgustingly dirty" (see also p. 233)—and the writer is a Chinese, and a Yünnanese at that! Throughout the work the writers appear to be genuinely convinced that the British desire to invade China from Burma and even (p. 119) to penetrate to Tibet and Szü-ch'uan via the Salwen. The contrast between the statement on p. 206, that the Was prefer to belong to "liberal China" rather than to the "British tyrants", and that on p. 152, that large bands of Shans have crossed the Burma frontier in order to escape their corrupt officials and tyrannical rulers, is worthy of note.

Some examples of the inaccuracy of the writers may also be given. Map No. 2 marks the demarcated frontier of North-West Yünnan and Burma as extending to the bank of the Nmai Hka north-west of Hpimaw (Pien-ma). On p. 70 it is said that the "British have almost succeeded in their efforts to grow tea in Burma and India". It is repeatedly suggested that the British use missionaries to prepare races on the Sino-Burman frontier for British conquest. (Actually the Roman Catholic missionaries on the frontier are generally French, the Protestants are American.) On p. 100, the south of the "Triangle", or area between the Nmai Hka and the Mali Hka, is said to be "inhabited by Puman", and on p. 101 all these Puman are said to have Chinese names. On p. 200 it is alleged that the Was "rear" elephants and use them for transport.

Occasionally the naiveté of the writers leads them to make observations of refreshing honesty. On p. 111 recognition is given of the difficulty of satisfying the demand for opium "owing to British repression". On p. 113 it is said that British frontier officials are easy to approach and that they

pay for services rendered. On p. 115 the observation is made that British soldiers (doubtless the military police are meant) are good to the inhabitants and never cause them annoyance. On p. 132 appreciation is given of the alphabetical system of writing native languages, introduced by missionaries and adopted by the British educational authorities. On p. 217 it is admitted that Chinese repression has caused the original hatred of the Chinese on the part of the natives of the Salwen valley to be changed to "fear and obedience". Since the book was written the rapacity of the frontier officials has led to a further rising with yet more repression and massacre.

The reviewer looks forward with interest to reading the further volume which is promised, and which will contain translation of the whole of volumes i and ii of the Chinese original.

C. O. BLAGDEN.

THE WEST CHAMBER. A Medieval Drama. Translated from the original Chinese with notes by HENRY H. HART. $9\frac{1}{2} \times 6\frac{3}{4}$, pp. xxxix + 192. London : Oxford University Press, 1936. 16s.

I am very pleased to see another translation of *The West Chamber* after my review of S. I. Hsiung's translation in the first issue, 1937, of this *Journal*. At first glance, I found the book very agreeable, not only because the green dust-cover with

its beautiful design is pleasing to the eye and the greenish end-papers are tastefully decorated, but also because the translator has put much laborious work into his comprehensive introduction and his notes cover a wide ground. But it gave me a shock when I read the first sentence of the introduction. He writes "there are ten books listed as Tsai Tzu Shu or 'Works of Genius' by the Chinese. They are all written in a scholarly form of the vernaculars as contrasted with the more formal works in the *wén li*, or scholar's language".

In fact, there are two lists of "Works of Genius", one of which was chosen by Chin Sheng Tan, and is composed of *Li Sao*, *Chuang Tzu*, *Shih Chi*, *Poems by Tu Pu*, *The West Chamber*, and *Shueh Hu*, which has been translated by Pearl S. Buck as "All Men are Brothers." Most of these are classical, of course, written in the standard scholars' language; but one of them, "All Men are Brothers," was written in colloquial style, or rather dialect, very valuable but far from being "scholarly" at all.

The other list consists of ten books, of which "The Tale of the Three Kingdoms" is the first, with a preface bearing the name of Chin Sheng Tan, but in fact, it was forged. Some of them are in the list chosen by Chin Sheng Tan, and some others are so far from "scholarly" that they are actually very badly written indeed. I do not know why Mr. Hart has overlooked this fact at the very beginning. Then when I went further into his translation, I must confess that I was greatly disappointed.

First of all, a translation must depend on an authentic edition. Mr. Hart writes further in the preface that he has followed "the text edited with scholarly introduction and commentary by Hsu Hsiao Tien". "Scholarly" once again! It appears that the translator is too generous in using this word. Hsu Hsiao Tien edited many such books for schoolboys which would not be used by a qualified teacher of literary taste. However, it seems the translator has used this edition for choice.

Secondly, the play contains sixteen acts, to which four acts are added by another author so as to conclude with a happy ending of which the value is disputable. There are only two alternatives in the choice of editions, sixteen or twenty acts. Mr. Hsiung chose the latter. I do not understand why Hsu Hsiao Tien has omitted the sixteenth act, and this omission has been followed by the translator. If the translator's reason for this is that "the sixteenth act is an anticlimax", he would have done far better to append this reason to his preface as a criticism, or entirely omit the "faulty" act when it is produced on the stage. But to omit it in the translation is, I am afraid, as much out of keeping as to translate a Shakespeare play while cutting an act of it. He says, "its authorship is doubtful," but he does not give any proof of this assertion.

Now, let us examine the translation. A few famous sentences cited in Chinese with every word translation into English and accompanied by Mr. Hart's and Mr. Hsiung's translation will help us to see the difference between these two translations.

曉來誰染霜林醉
in morning what (or who) dye frost forest drunken

總是離人淚
must be parting people's tears

Hart: What has dampened the frost-covered forest?

Indeed it must be the tears of parting

Shed by him I love. Page 162.

Hsiung: How is it that in the morning the white frosted trees are dyed as red as a wine-flushed face?

It must have been caused by the tears of those who are about to be separated. Page 191.

When Yin Yin was parting with her lover, she thought that all the red leaves must have been dyed by the tears of those lovers who were going to be separated like themselves, but Mr. Hart mistook "them" for "him". Unfortunately for Mr. Hart, Yin Yin had not to wonder whether the

phenomenon was caused by her lover's tears or not, because he was still before her. Take another instance in the same paragraph :—

倩 疎 林 你 與 我 掛 住 斜 曙
pray sparse forest you for me hang setting sun

Hart : I pray to you, forest,
Stop the setting sun in his heavenly course.

Hsiung : I pray you, O autumn forest, to hinder the setting
of the sun for my sake.

I do not think the literal translation "for my sake" spoils the beauty of the English, so I cannot see why Mr. Hart must change it for another phrase which happens to be an absolutely wrong translation, misses the point completely, and is; moreover, a stale eighteenth century cliché.

After all, it is a very difficult task for a foreigner to translate Chinese. But still there are some fine translators and Sinologists to whom we owe a great deal. Mr. Hart has perhaps done his best ; we must leave it at that.

A. 780.

SHELLEY WANG.

AN ORIENTAL HISTORY PARTICULARLY FOR THE PHILIPPINES.

By AUSTIN CRAIG. The Background of Philippine History.

$9\frac{1}{2} \times 6\frac{1}{2}$, pp. 446, ills. 4. Manila : Oriental Commercial Company, 1933.

An Oriental History Particularly for the Philippines is the work of Austin Craig, Litt.D., who in 1912 was appointed "Assistant Professor of Oriental History" in the University of the Philippines. Its author calls it "a book of reference", though for the most part it is without references, the source of its numerous quotations from works long since obsolete being given vaguely or not at all. Mr. H. G. Wells is freely cited as an eminent authority on Oriental History.

Only the first 102 pages seem to be original. They start off by extolling the Oriental but abandon that for extolling

the Malay. The Malay needs no such defence as is embodied in the sentence, "never has India been of much importance nor is it now!" Pages 103–166 contain an Oriental chronology after Ploetz; pp. 167–241, "India's Great Malay Kings extracted from Dr. Vincent A. Smith's *Oxford History of India*"; pp. 243–257 an uncritical account of the Malays from a work published in 1897 by Major-General J. G. R. Forlong; pp. 259–260, an account published in 1856 by John Crawfurd of the origin of the Malays, which ought to be as dead as the dodo; pp. 261–310, an account of Malayan trade written by T. Braddell about a century ago!

A crude, uninformed, uncritical hotch-potch. If this is a fair sample of the historical work of the University of the Philippines, that university must be in a very bad way indeed. What a descent from its early scientific American studies of Filipino tribes and languages!

A. 875.

R. O. WINSTEDT.

ESQUISSE D'UNE ETUDE DE L'HABITATION ANNAMITE dans l'Annam Septentrional et Central du Thanh Hoa au Binh Dinh. By PIERRE GOUROU, Publications de l'Ecole Franç. d'Extrême Orient. T. XXVIII. 11 $\frac{1}{2}$ × 7 $\frac{1}{4}$, pp. 82, pls. 28, figs. 35. Paris : Les Editions d'Art et d'Histoire, 1936.

Cette brochure fait suite au Chapitre V de l'ouvrage du même auteur : "Les Paysans du Delta Tonkinois." La maison annamite est une construction très soignée, d'après des règles précises et suivant des rites religieux. Elle contient l'autel des ancêtres, la salle des hommes d'un côté et la salle des femmes de l'autre. La cuisine est en dehors, à part ; elle communique parfois avec le gynécée. La maison annamite n'a aucune fondation ; elle est transportable. Elle est faite d'une charpente montée sur des colonnes. Le toit de chaume, ou de tuiles, n'est pas supporté par des murs (sortes d'écrans égers) mais par la charpente. Orientée au Sud, elle ne prend jour que sur l'intérieur.

Tout en montrant une grande variété, la maison annamite obéit à un plan unique.

L'Annam du Nord, qui va du Tonkin à la Porte d'Annam et au fleuve Song Gianh, présente des maisons au toit de chaume à 4 pentes, avec des petits côtés presque verticaux. Dans l'Annam Central (où est situé la capitale, Huè) le toit de chaume a aussi 4 pentes, mais les petits, côtés, faiblement inclinés, ne montent pas jusqu'au faîte et laissent apparent un espace triangulaire.

L'habitation annamite n'a subi aucune influence soit des Moïs soit des Chams. Elle procède du type tonkinois, que l'auteur "présume" avoir une grande parenté avec les habitations de la Chine du Sud.

A. 795.

DR. JOSEPH VASSAL.

TUFU'S GEDICHTE (nach der Ausgabe des Chang Chin),
Buch XI-XX, übersetzt von DR. ERWIN VON ZACH.
Sinologische Beiträge III. $12\frac{1}{2} \times 9\frac{1}{4}$, pp. 171. Batavia :
1936.

Ever since he has been engaged in the study of Chinese poetry Dr. von Zach has felt a desire, so he tells us, to produce a fuller translation of the leading poets of the T'ang dynasty than has hitherto been attempted. And the present volume practically completes his task so far as Tu Fu is concerned. Out of the twenty books in Chang Chin's edition, 6-10 were published some years ago in the *Deutsche Wacht*, while 1-5 are still in course of publication in *Monumenta Serica*. The remainder are now submitted to his co-workers in the sinological field, with the earnest request that they will suggest improvements in his version, which he regards only as the raw material to be turned into finished poems. His rendering aims at the utmost possible accuracy, and he hopes that it may serve as a help to younger men in their Chinese studies. This ambition Dr. von Zach will certainly achieve; but his own modest foreword does scant justice to the magnitude of

the work which now lies before the public. Tu Fu is a difficult poet, full of allusions and turns of phrase which demand close study and research; and the labour involved in a translation like the present can hardly be realized by those who have never struggled with the intricacies of Chinese verse. As many as 720 poems, mostly short but some of considerable length, are translated in this single volume; and although poetic phraseology is not attempted, it is no mean feat to have unravelled the bare meaning on the whole so successfully. Full references facilitate comparison with the renderings of previous translators.

Not content with all this, the indefatigable author translates by way of appendix four lengthy *fu* from the *Wên Hsiüan*, and a series of extracts from the poetical works of Yü Hsin, a writer of the sixth century who has been unduly neglected by foreign translators and critics. At the very end of the volume, Dr. von Zach contributes some further notes on Gabelentz's Chinese Grammar, and comments scathingly on certain blunders committed by eminent professors of Chinese in Berlin, Paris, and Leningrad.

LIONEL GILES.

KORAWĀCRAMA : een Oud-Javaansch proza-geschrift, uitgegeven, vertaald en toegelicht door J. L. SWELLENGREBEL. 9 $\frac{3}{4}$ × 6 $\frac{1}{4}$, pp. viii + 50* + 323 + 42. Santpoort : C. A. Mees, 1936.

This work is a thesis submitted for the doctorate in Literature and Philosophy in the University of Leyden. It consists of an introduction, an Old Javanese text with Dutch translation on the opposite pages, some ninety pages of notes, and several appendices, including a bibliography, a glossary and a list of proper names and special terms, while the cover contains a large collection of variant MS. readings. The text itself, of which an abstract is given in the introduction, is connected with the Mahābhārata in the sense that the same

personages appear in it. In the Javanese work, however, the Kauravas are brought to life again after their destruction by the Pāṇḍavas, and there are several sections or chapters which appear to be only loosely connected with the main story. The end of the work is missing in the manuscripts, but shortly before the conclusion of the text that has been preserved Karna asks Āditya for permission to slay the Pāṇḍavas. This permission is refused on the ground that they are godlike in their nature and models for mankind but also integral parts incarnate in humanity (thus Yudhiṣṭhīra is the soul, Bhīma the breath, etc.), whereas the Kauravas represent the selfish human desires for material things, such as wealth and prosperity. The book is a scholarly piece of work and an important addition to the Old Javanese texts that have been published in the last few years.

GESCHICHTE DER ARABISCHEN LITTERATUR. By Professor

Dr. C. BROCKELMANN. Erster Supplementband:

Lieferungen I-II. $9\frac{3}{4} \times 6\frac{1}{2}$, pp. 64 in each part. Leiden :

E. J. Brill, 1936-1937.

The new and revised edition of "Brockelmann", so long hoped for, is not to be. Instead, we have here the first fascicles of a supplement, for which, however, a welcome was assured in advance of its appearance. Even now it can be seen that there is a wealth of new material and of references to the more recent researches and controversies. Much of the success of the work with the scholar will depend on the form of the index. Are we to have the infuriating abbreviations of the original volumes again? The work is in such constant use that it would be a gracious act on the part of author and publisher to make some concession to the reader's patience (and eyesight). Presumably some revision will have been made of the original work and a list of errata supplied. Even in the new supplement the need for something of the kind is apparent. Some care with

these mechanical details will make "Brockelmann" more indispensable than ever. The familiar, almost affectionate, abbreviation of the title of the work shows what place it now fills in Arabic studies.

R. LEVY.

JAZIRAT AL-'ARAB FI'L-QARN AL-'ISHRIN. By HAFIZ WAHBAH.
10 × 6½, pp. ix + 438. Cairo, 1345-1935.

The Sa'udi Arabian Minister in London shows himself in this work to be a writer of no mean talent. The book opens with a detailed politico-geographical description of Arabia, followed by a summary of the political activities of the Sharifs during and after the War, and a longer account of the reign of King 'Abd al-'Aziz Ibn Sa'ud. The narrative moves smoothly, because free from excess of detail, and in its levelness of tone and freedom from polemics and exaggeration it is extraordinarily persuasive. Unvarnished in style but never dull, it is enlivened by personal anecdotes and experiences and little touches of humour. One would have liked to have more information about the social and industrial organization in the towns. On the other hand, the numerous documents (some of which the author tells us he retrieved from the palace after the Wahhabi capture of Mecca) inserted in the text and the appendix make it a most valuable source, and the work as a whole would be well worth bringing to the knowledge of a wider circle.

ARABISCHE TEXTE ZUR KENNTNISS DER STADT ADEN IM
MITTELALTER MIT ANMERKUNGEN. Herausgegeben von
OSCAR LÖFGREN. 10 × 6½. I. Zur Topographie,
pp. 24 + 50, pl. i. II. Biographien, pp. iv + 151.
Erste Hälfte. Uppsala : Almqvist und Wiksell, 1936.

The texts published in this work are the *History of Aden* by Abu Makhramah (A.H. 870-947) and extracts from other authors, Ibn al-Mujawir, al-Janadi, and al-Ahdal. In the first

volume Abu Makhramah's account occupies only 23 pages, of which a good deal is repeated in the excerpt from Ibn al-Mujawir which fills the remaining 47. Lists are furnished of buildings, wells, walls, etc., mixed with legendary and historical matter. Ibn al-Mujawir is a gossipy writer who tells all he knows ; the mention of a tunnel causes him to enumerate all known tunnels with their length ; the use of Aden as a place of deportation is occasion for a list of all other places used for this purpose. The second volume is considerably longer, of 171 pages, containing biographies of persons connected with Aden, in alphabetical order down to the name 'Umárah ; financial reasons delay the completion of the work, which should contain the very necessary Indices. It should also provide a glossary, as these texts employ many rare words, for which the editor not infrequently gives references without adding explanations.

His work is, however, very painstaking and scholarly, and deserves special gratitude here, since Aden is an important British possession. Before it enjoyed the *pax Britannica* its history was stormy ; at one time the tariffs on imports were so numerous and ingenious that the traders got nothing for their wares, and presumably kept away. The biographies contain much interesting matter. It is to be hoped that the editor will be enabled to complete this valuable addition to the history of Arabia.

D. S. MARGOLIOUTH.

INDO-TIBETICA III. Part II. I Templi del Tibet Occidentale e il loro Simbolismo Artistico. By GIUSEPPE TUCCI. Reale Accademia d'Italia Studi e Documenti. I. 10 × 7, pp. 210, pls. 152. Roma : Reale Accademia d'Italia. 1936.

The Reale Accademia of Italy has recently published the second part of the third volume of *I Templi del Tibet e il loro simbolismo artistico*, by Giuseppe Tucci, which, we are

interested to learn from the author, does not yet complete his important work on the Tibetan temples. This last volume¹ is consecrated to the study of the temples of Tsaparang situated in the valley of Satlug, not far from the Indian frontier.

We learn from Tucci that Tsaparang, one of the three ancient capitols of the province of Guge, was at the height of its artistic glory about A.D. 1000, that is, during the reign of Riñ c'en bzañ po, who had not only visited India but had sojourned in its famous Mahāyānist monasteries where he was initiated into the mysteries of Tantric Buddhism by the greatest masters of his time. On his return to Tibet, he introduced Tantric practices and ceremonies in the temples of Tsaparang and sent for Indian artists to decorate the walls of the temples with Tantric frescoes like those he had seen in India. The native artists were instructed in the mystic and symbolic meaning of the deities they were to portray by their Indian masters, who also initiated them into the rites and meditations which were to bring about an ecstatic state believed to be indispensable while executing the Tantric paintings. Tucci lays great stress on these practices which seem to explain the ferocious unreality of the Tantric creations such as, for instance, that of Śamvara and his *sakti* or of the *ekavīra* Vajrabhairava, both of which are veritable masterpieces of expression of primitive force.

Thus, as Tucci points out, the frescoes of Tsaparang are not only of great interest historically and æsthetically but, from the point of view of Mahāyāna iconography, are of the greatest importance.

The purest examples of the Indo-Tibetan school, according to Tucci, are to be found in the "white" temple, and he tells us that its frescoes have no rival. He calls our attention, however, to a point which differentiates them from the Tantric

¹ Indo-Tibetica, 3rd volume, 2nd part: *Tsaparang*. Frontispiece and two plates in colours, 160 plates in half-tones. Roma, 1936.

paintings in India, in that, instead of groups of important deities, we find each tutelary god isolated in the centre of a *mandala* surrounded by innumerable smaller personages, acolytes or secondary manifestations of himself, but painted with all the delicacy and *finesse* of the pure Indian tradition.

The frescoes in a small temple in the ruins of the royal palace which is dedicated to Samvara (bDe mc'og) are considered by Tucci to be the next in importance in Guge art. He refers particularly to a beautiful group of goddesses in the suite of the tutelary god and mentions "gigantic" gilt bronze statues of Buddhas. It would be interesting to know their exact dimensions and where they were cast.

The last vestiges of the early Indo-Tibetan school, it seems, are to be found in the "red" temple built at a time when the province of Guge had been taken over by the king of Ladakh, Sei ge rnam rgyl. Here again were found "gigantic" statues as well as frescoes, where the interest of the artists seems to have been concentrated on the decorations of the thrones, canopies, and cornices, and although such characteristic Indian motives as rampant lions and winged horses were frequent, they were treated in pure Indian style, without trace of Chinese influence so apparent in later Tantric paintings in Tibet.

Unfortunately, when Tucci reached Tsaparang, there remained only ruins of its glorious past. The temples, monuments of Indo-Tibetan art of inestimable value, had been desecrated and abandoned. Splendid frescoes, some of them painted with a profusion of gold ornaments, had been damaged and are still in danger of destruction from leakage in the temple roofs.

In one of the smaller temples, which Tucci believes to be unique, the polychromed figures in relief that adorned the *mandalas* on the walls had fallen and were found by him in a rubbish heap. He carefully sorted them out and, with the help of liturgical manuals, as well as taking for guide the *Method of the Mystical Realization of Samvara* by Siddha lüi

pā with its glossary by Tsōn k'a pa, he was able to reconstitute the *mandalas* and replace each deity in his allotted place.

It is interesting to learn that Tucci has found forms of deities unknown in the Buddhist pantheon which he has not been able to identify to his satisfaction. Are they unknown manifestations of known deities or forms of deities as yet unknown to us? At any rate, it is to be hoped that Tucci will be able to establish a *Tibetan* pantheon and at the same time reveal to us the hidden meaning of the *mandalas* wherein the "unknown" deities were placed.

There is another interesting point which remains for Tucci to elucidate, that is, the presence of the same group of *Hindu* deities among the Tantric Buddhist gods at Tsaparang that we find in the Buddhist *Mandala of the Two Parts* which was brought to Japan from China by Kōbō Daishi several centuries before the Indian artists executed the Tantric Buddhist frescoes at Tsaparang.

ALICE GETTY.

AFGHANISTAN—A BRIEF SURVEY. By JAMAL-UD-DIN AHMAD.

10 × 7½, pp. xx + 160, ills. 67, maps 3. London : Longmans, Green and Co., 1936. 12s. 6d.

Jamal-ud-Din Ahmad and Muhammad Abdul Aziz have written a useful book containing valuable information more especially as to the new order in Afghanistan.

In their historical sketch, which is somewhat compressed, they point out that their country was a great commercial centre in the ancient and medieval world and continued to be so until the modern development of sea-borne commerce. They also refer to the fact that, under the Timurid princes, Herat became a famous centre of art.

The account of the rise of the present dynasty and what it is doing for Afghanistan is of greater importance, and we learn that Westernization is proceeding at a rate which is suitable to the mentality of an intensely fanatical, conservative, and

martial race (or rather medley of races), which, to a great extent, inhabit mountain valleys difficult of access, with hereditary dispositions to raid and to engage in feuds. Fair weather motor routes and the postal motor omnibuses are gradually widening the outlook of the people as in neighbouring Iran, while the firm but sympathetic government based on a disciplined and regularly paid army is ensuring the safety of the caravans—perhaps for the first time in Afghanistan. Verily, the old order changeth, yielding place to new.

India

ORIGIN AND EARLY HISTORY OF ŠAIVISM IN SOUTH INDIA.

By C. V. NARAYANA AYYAR. Madras University Historical Series, No. 6. 10 x 7, pp. viii + 484. Madras : University of Madras, 1936. Rs. 5, 10s.

This work is chiefly devoted to the Šaivism of South India, but the author includes a history of this religion from Vedic times. Its earliest form should perhaps be called Rudra-worship, for the author has no difficulty in showing that in the Vedic period no phallic element is present. Even the linga may not at first have had any such significance. This may be granted, but the author seems to hold that it properly has no such significance at all. The most he will admit is that "the few exceptions may really belong to a phallic tribe; this, however, has no bearing on the nature of Šiva and Šaivism". There seems to be much more discussion and setting forth of opposing views needed before the question can be said to be thrashed out. He is no doubt justified in ignoring the evidence found in the Indus civilization when treating of the Vedic period. Whatever the time was when phallic worship came in, at least it was not in that period, even if such worship ultimately goes back to the Indus civilization. Again we ask how and where did it come in, but the author is silent. Even for the Vedic period

the different names of Rudra in different regions look like syncretism, but no explanation is offered.

The greater part of the book deals with the lives and works of five great Nāyanārs. It is clearly written in a beautiful style, and should be an important contribution to our knowledge of Tamil literature. Even here there appears to be gaps. The dates and works of these authors are fully treated, as well as their philosophy, which is expressly called Vedānta, but their relation to earlier doctrine is only sketched. If the work is to be called a history, can the Śaiva āgamas be ignored ? And are there no Śaiva sects that on moral grounds are looked upon with disapproval ? The author admits that the Śaiva religion got into disrepute, but this was "because a number of hypocrites began to lead a very bad life in the name of religion", and he instances a kāpālīka who got drunk. But this was not a part of his religion, and any religion may have cases of hypocrisy. There are very different charges brought against Śaivism, and in the interests of completeness they cannot be ignored. But this is no reflection on the excellence of the treatment of the Śaiva saints and their religion which the author has given.

E. J. THOMAS.

THE KASHMIRIAN ATHARVA VEDA. Books XVI and XVII.

Edited with critical notes by LEROY CARR BARRET.

American Oriental Series, 9. $10\frac{1}{4} \times 6\frac{1}{2}$, pp. iv + 198.

New Haven, Connecticut : American Oriental Society,
1936.

The canons of scholarship ordinarily discourage the publication of a text based only on a single incorrect MS., but the Paippalāda recension of the *Atharvaveda* differs so greatly from the Saunaka recension, familiar to all of us, that the unusual value accruing to it thereby makes it an exception to the rule. Dr. Barret has been at work on this text for over thirty years, and his task is now approaching completion, only three books being still outstanding. In the present volume

he has followed the same methods of editing as in the previous instalments, which appeared in the *JAOS.*; and, though the readings often remain doubtful, he has proved that a usable text can be extracted from the MS., and he deserves every credit for the achievement.

For the Sanskritist, however, who is not a Vedic specialist but who often has occasion to consult the *Atharvaveda*, this edition has the unfortunate defect of being unusable in the two respects that he requires without an inordinate amount of labour. To him the importance of this recension lies firstly in the variant readings which it gives of verses already known in the Vulgate, but which for the most part are not recorded in the *Vedic Concordance*, and secondly in the many new hymns and single verses. Owing to the different disposition of the two recensions it is necessary at present to look through fifteen numbers of the *JAOS.*, as well as the present volume, to discover the whereabouts of parallel passages. Nor is it much easier to come at the new matter, part of which, the hitherto unknown philosophical hymns, may have considerable value for others besides Vedic scholars. Is it too much to hope that the entire work may be made accessible by the publication of the whole in volume form, by the provision of a concordance with the Śaunaka recension, and by a subject analysis of the new hymns?

A. 708.

E. H. JOHNSTON.

TIBETAN YOGA AND SECRET DOCTRINES. Or Seven Books of Wisdom of the Great Path, according to the late Lāma Kazi Dawa-Samdup's English rendering. Edited by W. Y. EVANS-WENTZ. 9 x 6 $\frac{1}{4}$, pp. xxiv + 389, ills. 9. London : Oxford University Press, 1935. 16s.

The present book is the third of a series of treatises on Tibetan yoga.¹ All three are editions of the English rendering

¹ The first and the second are: *The Tibetan Book of the Dead*, 1927, and *Tibet's Great Yogi Milarepa*, 1928, Oxford University Press, both books being editions of the late Kazi Dawa-Samdup's translations.

of yoga texts by his late Tibetan guru, Kazi Dawa-Samdup. The editor's object was "to bring about amongst the peoples of the Western world a better understanding of some of the master-minds of Tibet and of India" (p. viii), not by means of forced analogies but by throwing into relief the differences between, and the independent value of, both groups of culture. But besides having edited these important texts, most of which have been unknown in the West to this day, he has enriched and deepened them greatly by a general introduction as well as annotations which are the result of more than fifteen years of local researches and of oral teaching received during this time. As everywhere in the East, oral tradition is, even to-day, the true esoteric teaching in Tibet, while the texts merely serve exoteric purposes.

In E.-W.'s introduction we find points like the following : "The joyous optimism of Buddhism" (pp. 10 ff.) ; Nirvāṇa is described as "the cooling out of the three fires of desire" (p. 8) ; "The great yogin . . . is said to be able to observe the life of micro-organisms in a way impossible for a scientist with a microscope ; or to study the nature of suns or planets or nebulae the most distant, which no telescope could ever reveal" (p. 23). If this were the case we would at last be in a position to check yogic results which, originally, had been obtained without the aid of instruments.

Of the annotations, some merely explain terms that occur in the texts. Others are more representative of the personal views of the editor, who concedes to the West a superiority in the exact sciences, but tries to demonstrate in his annotations the infinitely greater advance of the East in the knowledge of psychic experience. Since Mr. Evans-Wentz in his trilogy has edited texts that are conceived from this highly developed yogic knowledge, and since, in his annotations, he has continually striven to throw light on the special significance of a world of thought hitherto neglected in the West, it is natural that he should have met with the universal and unreserved approval of all those who, in the West, have

set themselves the task to develop and explore, from all possible angles, the world of the irrational. The success of his editions is, indeed, similar to that of Sir John Woodroffe's work on the Tantra systems.

A. 507.

BETTY HEIMANN.

VIJAYANAGARA SEXCENTENARY COMMEMORATION VOLUME.

Published by the Vijayanagara Empire Sexcentenary Association, Dharwar, 1936. $7\frac{1}{2} \times 10$, pp. xiv + 380, ills. 45, figs. 7. Dharwar, 1936.

The Vijayanagara Empire was thoroughly "forgotten" by Indians and Europeans alike when Robert Sewell rescued it from oblivion in 1900. Sewell's work bore fruit; to him it is due that a generation later this volume of 32 essays by many Indian scholars and one European celebrates the 600th anniversary of the founding of the city.

Detailed discussion of each article is impossible in a short notice, and it would be invidious to pick and choose. The book is more coherent than the usual *Festschrift*. Articles Nos. 1, 2, and 9 are of a general character; Nos. 11 and 12 deal with the vexed question of origins; Nos. 14 to 19 specialize in the reign of Krishṇa Rāya; No. 27 concerns the capitals; Nos. 13 and 24 the Tamil and Kongu provinces; No. 21 the daughter state of Keladi; Nos. 9 and 10 Maratha repercussions. The Hinduism of the period is treated in No. 3, Jainism in No. 5. Literature is surveyed generally in No. 4 (Telugu), No. 26 (Sanskrit), and No. 30 (Kanarese), and particular works figure in Nos. 17, 20, and 32. Art under Krishṇa Rāya is dealt with in No. 16; painting in Nos. 6 and 7; music in Nos. 28 and 31. Economic conditions find place only under Krishṇa Rāya (No. 18). The imperial coinage is summarized and figured in No. 8. It is curious that though most of the plates illustrate the architectural monuments in which the period was so prolific, only one building, the unique Vidyasankara Temple at Sringeri, is

described (No. 25). This is scant justice for a noble art, but in other respects this volume, which is extremely well printed, is a fitting tribute to one of the greatest of Dravidian Empires.

A. 908.

F. J. RICHARDS.

THE TEST OF A MAN, being the *Puruṣaparīksā* of Vidyāpati Thakkura, translated into English by Sir GEORGE A. GRIERSON. Oriental Translation Fund, Vol. 33. 8 $\frac{3}{4}$ × 5 $\frac{3}{4}$; pp. xx + 194. London: The Royal Asiatic Society, 1935.

Vidyāpati, court poet to the Simha kings of Mithilā in the fifteenth century and famous for his Maithili Kṛṣṇa-lyrics, wrote also a variety of Sanskrit works. The *Puruṣaparīksā* is a collection of forty-four tales illustrating the qualities—courage, generosity, piety, acquired skill, etc.—which distinguish a true man from a two-footed animal. The form is that of the great classical fable-books, simple prose narrative interspersed with gnomic verses, but the characters and incidents are taken from contemporary or recent history, and several well-known Hindu and Muslim rulers are mentioned. Sir George Grierson's translation is complete, except for a few expurgations, faithful, and readable; his introduction gives an interesting account of the author and his times; and he has explained in footnotes the historical and geographical references. We are grateful to the veteran Indologist for this further proof of his all-embracing scholarship and undiminished activity.

A. 563.

C. A. RYLANDS.

RISE OF THE SIKH POWER. By N. K. SINHA. 8 $\frac{1}{2}$ × 5 $\frac{3}{4}$, pp. ix + 240, map 1. Calcutta: University Press, 1936.

This little book is a useful and careful contribution to the history of a little known period of Indian history. There is no more obscure episode in the history of Northern India

than that of the disintegration of the Northern Subahs of the Mughal Empire after the virtual collapse of the Delhi monarchy which followed the invasion of Nadir Shah. Sir J. N. Sarkar has dealt with the topic in his *Decline and Fall of the Mughal Empire*, but only as part of a general survey. Mr. Sinha has concentrated on events in Northern India and has given us a connected narrative—so far as it is possible to be connected—of events in that area in the latter half of the eighteenth century. The authorities are not many and some of them are of little value, but the author in his bibliography clearly indicates what is likely to be of value to any later investigator. On the English side, apart from the official correspondence, there is little but Forster's *Travels*, and, while these are interesting enough reading, their historical value is distinctly doubtful. Much more importance, however, may be attached to an examination of the coins of the period, and the author has wisely made use of Whitehead's catalogue of coins in the Lahore Museum.

The personality of the principal figure in North Indian affairs during most of the period—Ahmed Shah Abdali—is a matter of much interest. Many historians have represented him as a mere freebooter, of the type of many other invaders of India, such as Mahmud of Ghazni. Mr. Sinha takes a different view, and, to quote his own words: “In reality Ahmad Shah was a statesman as much as he was a soldier, and this fact should be noted to the credit of the Sikhs that they were successful against one who was not a mere adventurer, but a brilliant soldier and a clear-sighted statesman, with a firm grasp of the realities of the situation.”

Upon the anvil of Afghan invasions the foundations of the Sikh hegemony in the Punjab were hammered out, and, in no part of the area was this more apparent than in the Cis-Sutlej tracts, where the striking personality of Ala Singh secured the comparative independence of the greater part of this territory and made its history very different from that of the Trans-Sutlej. There the gradual weakening of the Afghan

control and the ebb of the Mahratta wave of invasion from the South made possible the development of the various Misls. But it was inevitable that these organizations, though trained by years of ruthless warfare to make common cause against the Mussulman, should by their very origin and training, develop such a turbulent and truculent spirit that, once the Afghan authority collapsed, they were bound to quarrel among themselves. But for the advent of Ranjit Singh and his establishment of a general control over the Khalsa, this period of internecine strife might have gone on for many more years. With all his faults it is to the credit of Ranjit Singh that he managed to bind these discordant units into a coherent state.

Warren Hastings had realized that, with the advent of this new theocracy, a new power had arisen in Northern India, and he predicted its ultimate ascendancy there in a series of minutes to the Court of Directors, which are quoted by the author. Later, in the time of Cornwallis, it became a matter for consideration as to whether it would not be worth while to utilize this new military element for the Company's own service. Cornwallis called for a report on the subject in 1787, but this commented so adversely upon the Sikh incapacity for discipline that the matter went no further. To quote Mr. Sinha : "Not until the successful military reforms of Ranjit Singh was this myth dispelled, and the Anglo-Sikh campaigns of the nineteenth century definitely established the fact that the Sikh was pre-eminently a disciplined soldier."

H. L. O. GARRETT.

HISTORICAL GEOGRAPHY OF SIND. Part II. By M. B. PITHAWALA. $10 \times 6\frac{3}{4}$, pp. 62. Karachi, 1936.

We have not been favoured with Part I of this work. The present issue, however, begins from the Prehistoric Period. Little effort is made to trace the physical changes in Sind, which have been very considerable owing to the growth of

the Delta, the divagations and disappearances of rivers, and, probably, the increase in desiccation. On these points one would have expected more reference to the work of Raverty and Haig than a brief mention in a footnote. The author is more concerned with what he calls the Human Geography. Although, however, the aboriginal tribes are mentioned, no effort is made to trace the most marked and characteristic of these tribes, the present Muhanas, undoubtedly identical or closely connected with the Mianas of Kathiawar. This people was probably responsible for the old towns named Minnagar in both Sind and Kathiawar, and for the term Miani, still applied to their fishing villages in Sind, but formerly having a wider meaning, as shown by the Port of Miani in the Porbandar State. Although a reference is made to the reading of the Mohenjo Daro seals propounded by Father H. Heras, it is not stated that he believes that he has found reference to a people called Minas, and their city Minur. The little book gives a correct picture of the physical characteristics of the Province and contains some useful notes regarding ancient sites discovered since Mohenjo Daro was closed.

P. R. CADELL.

THE BUDDHACARITA OR ACTS OF THE BUDDHA. Two Parts, 10 × 6 $\frac{3}{4}$. Part I: Sanskrit text edited by E. H. JOHNSTON, pp. xxii + 166. Part II: Cantos I to XIV translated from the original Sanskrit supplemented by the Tibetan version, together with an introduction and notes, by E. H. JOHNSTON, pp. xcvi + 232. Panjab University Oriental Publications Nos. 31 and 32.

THE BUDDHA'S MISSION AND LAST JOURNEY: BUDDHACARITA XV to XXVIII. Translated by E. H. JOHNSTON. Reprint (pp. 128) from *Acta Orientalia*, vol. xv (1937). Calcutta : Baptist Mission Press, 1930.

There is hardly another work in the whole range of the classical Sanskrit literature for the restitution and understanding of which so many scholars have collaborated as for

that of this grandest achievement of the greatest poet of Buddhism, the Buddhacarita of Aśvaghoṣa. Nearly half a century has elapsed since interest in it was roused by Sylvain Lévy and Cowell, and, like these, most of those who subsequently contributed their share to the difficult task—Leumann, Boehltingk, Kielhorn, Speyer, Finot, Gawroński, Hultzsch, Cappeller—are no longer among the living now that the editor and translator of the Saundarananda has presented us with a new edition and translation of the B.C. which it will be difficult to surpass. We have before us: (1) a new critical edition of what is preserved of the *original* Sanskrit text, i.e. without those parts (included in the *editio princeps*) which were composed to heal the already mutilated text, and, consequently, beginning with canto i, stanza 8 (missing in Cowell's edition) and ending with xiv, 31 (= Cowell xiv, 32) of the original; and (2) a translation of the *whole* original B.C., viz. from the Sanskrit so far as preserved and for the rest from the Tibetan and the Chinese. There was, as will be remembered, already the complete translation from the Chinese by Samuel Beal (1883) and the incomplete one from the Tibetan by Friedrich Weller who edited and translated only cantos i to xvii (1926, 1928). For the last eleven cantos (xviii to xxviii), then, Johnston had to do pioneer work based, as he informs us, on his collation of "the India Office copy with an admirable rotograph of the red Peking edition" of the Tibetan, and the Taisho Issaikyo edition of the Chinese translation. As J.'s translation volume extends already beyond the preserved Sanskrit text (viz. up to the end of canto xiv), it seems regrettable that the remaining cantos, instead of being appended to it, have been published in a journal. In both, edition and translation, the counting of the verses is that of the Tibetan version and thus partly not the same as Cowell's.

For the edition, the chief authority has been the rotographic reproduction (referred to as "A") belonging to the Trustees of the Max Müller Fund, and "unfortunately far

from perfect ", of the manuscript preserved in Kathmandu from which the three modern MSS. in Europe can be shown to descend. The editor gives a description of its peculiarities, and assigns it to about A.D. 1300. His second authority was necessarily the Tibetan translation, which proved to be of invaluable help. "The translator clearly had at his command a MS. that belonged to the same textual tradition as A, but in general was superior, despite a certain proportion of inferior readings." In but a few cases the indications of the Chinese translation could be accepted against the Sanskrit and the Tibetan. The new edition, according to the synopsis on p. xvii, leaves out as spurious the verses ed. Cowell i, 1-24, 26-8, 44-5; xiii, 73; and xiv, 21; while adding fifteen verses unknown to Cowell. The *apparatus criticus* does not mention all conjectures made, but only the few accepted by the editor without authority from any of the sources, and, secondly, a small selection in the case of passages which remain doubtful.

The far more bulky translation volume contains much in its copious footnotes which belongs to editing rather than translating, and is, indeed, intended to be read along with the edition. It gives also a list, complete so far as I can see, of "books and articles dealing wholly or largely with the *Buddha-carita*" and a second one of other material used by the editor; further an alphabetical index of Sanskrit words and names and, finally, a few Addenda and Corrigenda. The notes prove the immense labour undergone by their author in ten years of preparation "by reading with one eye on Aśvaghoṣa's works everything published in Sanskrit or Pali that might throw any light on obscure passages" (Edition, Preface, p. vi); and so does the brilliant Introduction, dealing in four parts with the life and works of Aśvaghoṣa and with A. "the Buddhist", "the scholar," and "the poet".

The third part of J.'s work was the most difficult one because, for it, nothing of the Sanskrit original was available. Convinced that there are "few verses or even *pādas* which

can be put back into Sanskrit with any degree of certainty", J. has wisely chosen as his general method "to translate the Tibetan in the light of the Chinese", adding here and there in brackets the Sanskrit words so far as recognizable, and marking with an asterisk all verses found in the Tibetan but missing in the Chinese. This part contains two cantos (xviii and xxvi) which, being "about the earliest specimens we possess of dialectics in a modern form, are of great interest for the history of the evolution of Indian thought".

How far this largely conjectural third part and those portions of the second that have also not the support of the Sanskrit are successful the reviewer, ignorant of the Chinese and for the Tibetan confined to Weller's incomplete edition, must leave to others to decide. The Sanskrit part, on the other hand, appears to him to leave practically no room for improvement so long as no new manuscript is discovered. The translation of this part is also excellent; but naturally something remains to be done here for the better understanding of a number of passages. The following are a few suggestions concerning verses of some parts given special attention to by the reviewer.

i, 20. *Tathāgatotpādagunena* = "by the virtue of his birth in this fashion" looks to me highly improbable. If (in connection with Asita's visit) the child can by anticipation of its future be called *janmāntakara* (i, 49) and *śreyahketukarah parah* (Saund., ii, 56) (see my review in *OLZ.*, 1935, p. 456), the word *tathāgata* may well have the ordinary meaning here. I would also not supply *yasya*, but rather see a new beginning here (as, in i, 16, *tasya saumye* taken up by *yam gauravat* in 17), *yasya* in 21 taking up *tathāgata* understood as *tathāgatasya*.

ii, 51. ". . . honoured and intoned the holy chants of *Svayambhū*" and footnote. Here J., as former translators, has erred, in my opinion. *Arcayitvā* is simply a metrical substitute for *arcane*, *arcākale*, as *arcikam* is a makeshift for *stotram* and *svāyambhuvam* for *prājāpatyam*. *Aśvaghoṣa*, a learned Brahman writing "for a circle in which Brahmanical

learning and ideas are supreme" (Introd., p. xv), cannot have thought of the king as chanting Vedic hymns, and there is no good sense in assuring that he "honoured" them. Neither a "panegyric song (or *mantra*) emanated from Svayambhū" (Tib.) = "il Veda rivelato da Svayambhū" (Formichi) nor "Vedic texts to Svayambhū" (Cowell) can be meant, but only (cf. R. Schmidt) a non-Vedic song of praise to the father of mankind. Transl. omits *putrasthitaye*.

ix, 3. So far as my personal experience goes, a Hindu saint, when receiving in his *āśrama* a worldly visitor even of the highest rank, is always seated and never rises to salute him. Transl. therefore : "They did reverence to the Brahman and were themselves duly saluted by him, and, having been given seats, explained, putting the matter briefly, their business to the Bhārgava seated before them." The saint, in audience, occupies a raised seat, while the visitors are sitting on mats.

ix, 21. Both *ubho'pi* and *ubhau'pi* are, of course, impossible, but *ubhe'pi* is explicable by a dim remembrance of Vedic usage by one who, like A., had a certain knowledge of the Veda and regard for its language; cf. Whitney, § 138g (*atho'si*), and the Vedic treatment of the verbal duals in -e as not *pragrhya*. In *d*, *vittādhipatyam* is surely a corrupt reading; the original must have had either *cittādhipatyam* (observe *yatīnām* in ix, 18) or *vidyādhipatyam*.

ix, 38. *sarvakālān* cannot be correct; read *sarvakālam* (suggested for Tib. by Weller) which facilitates also (graphically) the restoration of the following syllable as read by J.—*karsati* is confirmed by neither Tib. nor Chin. both of which point to the meaning "pervades" and thus, possibly, to *mūrcchati*.

ix, 50 c-d. I cannot believe in *rājyāngitāḥ* nor in "stained by kingship", but think that A. must be corrupt here and T right (*anvitāḥ* or, rather, *āśritāḥ*). In *d* I miss in the original the word for "reached". I should translate: ". . . abiding by kingship . . . they deluded themselves with a non-final liberation" (cf. xii, 69 and 79; *mokṣa*- for *mokṣe* or *anaiṣṭhike*

for *anaiṣṭhika-, metri causa*). To *vā bhṛtendriyatvāt* I prefer *vābhṛtendriyatvāt* as connected with both the preceding and the following.

ix, 51. It is unintelligible how *nāham*, if this was the original reading, could have become *moham*, and very unlikely that T should have overlooked the negation and kept only *aham* = *bdag (m)*. Still, if Weller's suggestion to read *so'ham* be accepted, *aniścayena* would have to be connected with *pravivikṣur (d)*, which means a *duranvaya* of the boldest kind. The text, then, remains doubtful, though the scribe's emendation (conjecture) *nāham* is undoubtedly captivating.

xi, 60. I would translate: "For, that this (fickleness of the young and steadiness of the old) is no fixed rule, can be quickly recognized: as well may old age be volatile and youth constant," or (with *adhyātimat* through Sandhi): ". . . old age too may be volatile and youth inconstant," but the former (hinting at the decline of will power through physical infirmity) appears to be better. For *capalam* as synonymous with *śīghram, tvaritam*, etc., see *Amarakośa*, i, 68, and compare the etymology of English *quick*.

F. OTTO SCHRADER.

LA LANGUE BRAJ (DIALECTE DE MATHURA). By DHIRENDRA VARMA. 10 × 6, pp. vi + 135, map 1. Paris: Adrien-Maisonneuve, 1935. Frs. 35.

This monograph by the Director of Hindi Studies in Allahabad University is apparently a thesis for the doctorate of the University of Paris. It has been written under the supervision of Professor Jules Bloch and furnishes a good example of the valuable results which may be obtained by the collaboration of the east and the west. In this case the personal knowledge of an Indian language possessed by an educated man who speaks it as his mother tongue has been directed and guided by an accomplished European scholar. The fruit of this collaboration is seen in all parts of the book.

The author belongs to a biggish village about 150 miles east of Delhi; he is a member of the Hindustani Academy and one of the editors of the Hindi quarterly published by it. He is able to bring to his study a close acquaintance with the country and an intimate speaking knowledge of the language.

The introduction of 48 pages is full of useful and interesting information not only about the country and its population, but about the language which is described from the earliest times almost to the present day. The account of the language deserves close study, for it includes in addition to the language proper a survey of the literature with notes on the principal writers. Far too little is known of what Indians think of their language and literature. What they have written—and it increases in volume every month—is largely confined to Hindi publications which few Europeans have the inclination or ability to read.

The second and larger part of the book is devoted to the grammar, including the phonology, accidence, and syntax of both old and modern Braj.

Every student of the language, if he can read French, should possess this book, for it contains much information which is not readily obtainable elsewhere.

T. GRAHAME BAILEY.

RĀM CARIT MĀNAS : TULSĪ DĀS'S RĀMĀYAN. Edited by RĀM NAREŚ TRIPĀTHĪ, with translation and notes. First edition, $9\frac{1}{2} \times 7\frac{1}{4}$, pp. 1,624, plates 6. Allahabad : Hindi Mandir Press, 1935. Rs. 5s.

The Hindi world owes a great deal to the editor of this volume. He has written poems, plays, short stories, and a book of jokes and humorous tales; he has edited six books of Hindi verse, and is the author of a book on how to write poetry; he has brought out an edition of Bhūṣan, the great poet of *vir ras*, he is well known for literary criticism, and he has compiled a Hindustani Dictionary which pays special

attention to the current language. Of his collections of verse three are devoted to village poetry and songs. These give a splendid idea of what Indian villagers think and love.

He has placed us still further under an obligation by this commentary and translation of Tulsī Dās's Rāmāyaṇ. The text is that of the Nāgarī Pracāriṇī Sabhā published a few years ago, nearly, but not quite, the same as that employed by Shyām Sundar Dās in his translation.

The introductory matter extends to well over 300 pages ; it contains a long account of Tulsī Dās's life and work, his personal characteristics, his popularity, and the honour paid to his writings. A useful list is given of all the Arabic and Persian words in his works. From this we see that the Rāmāyaṇ has 62 and the Kavitāvalī 136. There are notes on other translations and commentaries.

Though the editor rightly insists that Rām Carit Mānas is quite different to the Sanskrit Rāmāyaṇa, he claims that there are echoes in it of between 200 and 250 Sanskrit works (pp. 137-160).

On pp. 171-4 are given 162 lines which are commonly heard in the everyday conversation of both villagers and townspeople, both learned and unlearned.

The translation is simple and good, not overloaded with Sanskrit words in the manner loved of many pandits.

This brief notice may serve to draw attention to a work of great merit.

T. GRAHAME BAILEY.

SOME ASPECTS OF MUSLIM ADMINISTRATION. By R. P. TRIPATHI. $8\frac{1}{2} \times 5\frac{3}{4}$, pp. vi + 408. Allahabad : Indian Press, Ltd., 1936.

The title of this book, though sufficiently explicit in India, where it was published, may mislead scholars in other countries : it deals not with Islamic administration in general, but only with developments in India up to the reign of Akbar ; and its scope is limited to three institutions, kingship, the

vazārat, and the revenue. The book has been waiting for a publisher for ten years, and has not been brought up to date : thus it ignores the third volume of the *Cambridge History of India* (1928), and (except for an inserted footnote) my study of the *Agrarian System of Moslem India* (1929). Of the three divisions, the first is decidedly the best, for the chroniclers were usually careful to give the facts regarding each succession to the throne, and the author has stated them clearly. The development of ministers and ministries is a more difficult subject, for the available information is fragmentary, and the reconstruction offered by the author is not always convincing. The treatment of the revenue system suffers from the absence of any sustained attempt to interpret the technical terms ; and, not to go into wearisome detail, I may say briefly that I prefer my own version of the story in the somewhat numerous points where it differs from that put forward by Dr. Tripathi. In scholarship the book is not entirely immaculate : the facile acceptance of *khūṭ* as a loan-word from Marathi (p. 256) ignores the two Perso-Arabic letters with which it is written ; the definition (on the same page) of *chaudharīs* as revenue-collectors can scarcely be accepted ; while the statement (p. 313, n.) that in the phrase *dah qānūngō* the latter word "is singular and not plural" as Jarrett translated it will not appeal to Persian grammarians. There is a useful index, and the number of misprints is not large by Indian standards.

W. H. MORELAND.

THE DHAMMAPADA. By IRVING BABBITT, late Professor of French Literature, Harvard University. Translated from the Pali with an Essay on Buddha and the Occident. pp. xii + 123. New York, London : Oxford University Press, 1936.

Save as an act of piety, it was regrettable that yet one more of the upwards of a dozen translations of this classic should have been added to, especially in that the translation is of past years, and is not of such a new growth as could benefit

by light thrown on the text by recent discoveries, and historical research. It is the work of a *littérateur*, not of an historical scholar. No significance, to take only the first verses, is seen in the fairly obvious gloss superposed on these, betraying the later interest in a new psychology of "mind" as a corpus of uniformities, coming *between the man*, as acting "with mind" (*manasā*) as well as with body. And so we get not a literal, old-world rendering of *manopubbangamā dhammā* :—

Things are forerun by mind. . . .

but a present-day Englishing : "All that we are is the result of *what we have thought*." And so on. . . . The late author had compiled notes hereto. And, with so thoughtful and relatively independent-minded a writer, these might have been more useful than the translation. Such is the Essay that follows : in it we have another case of a man knowing his subject relatively at second hand, and, steeped in European culture, appearing less subservient to the acceptance of monastic Buddhist formulas than are most Indologists. It is true that, by him too, any and every phrase in the Suttas imputed to "the Buddha" is referred to as "Buddha relates", or "the Buddha's own phrase". But there comes also a respite when we read (p. 73), "the Buddhist inclines to . . .," "the Buddhist commentators give what they conceive to be. . . ." This is ever so much better, and one breathes more freely.

For me the essay is chiefly interesting as it infers that "in its essence Buddhism is . . . a psychology of desire" (he means "will"), and that "knowledge in matters religious waits upon will". Whether, if unacknowledged, it was I who led him to this—I don't find it in any other among us translators of Dhammapada—or whether it was his own discernment, it is good to see it.

I wonder whether the unpublished notes contained the interesting coincidence between Dh. ver. 112 and a sentence by the Spanish mystic, Diego de Estella, which I have just read :—

Dhp. (? 500 B.C.) : Better than that he live an hundred years
 a sluggish life of energy sunk low,
 were it to live but for a single day
 as man of strongly stirred up energy.

Diego (A.D. 1524-1578) : A single day of fervent service is
 worth more than 100 days of lukewarm
 and lazy service.

To which I would venture to add : How surely do men of vision bring man near to fellowman ! To show this is the best task for *littérateurs*, at least until they come to see religions in historical perspective.

A. 679.

C. A. F. RHYS DAVIDS.

THE INDIAN TRAVELS OF APOLLONIUS OF TYANA. By ST. JARL CARPENTIER. Skrifter utgivna av K. Humanistiska Vetenskaps-Samfundet i Uppsala. 29.3. 9 $\frac{1}{4}$ × 6, pp. 66. Leipzig : Otto Harrassowitz, 1934.

In this study of *The Indian Travels of Apollonius of Tyana* the late Professor Carpentier examines their historical value and concludes that part, at least, may go back to a traveller who had been through Afghanistan and as far as Taxila but no farther. Whether the traveller was Darius, the companion of Apollonius, it is impossible to say. It is probably better to regard the work as written in the style of the *Travels of Sir John Mandeville*, and consider the parts which occasionally appear to be correct as coming from common knowledge of India, on lack of evidence that the author had actually been there.

A. 355.

J. ALLAN.

THE DYNASTIC HISTORY OF NORTHERN INDIA : EARLY MEDIEVAL PERIOD. Vol. II. By H. C. RAY. $10 \times 6\frac{1}{4}$, pp. xxiii + 634 (= pp. 665-1298), maps 10. Calcutta : University Press, 1936. 15s.

Dr. Ray in this volume well maintains the high standard of the first part of his great work (*see* review in this *Journal*, 1933, p. 982). In eight chapters he traces the history of the Candellas, Haihayas, Kachwāhas, Paramāras, Caulukyas, Cauhāns, Tomaras, and Guhilots as derived from their inscriptions, the Jain traditions, Muslim histories and coins. His collection of material is exhaustive, and on doubtful matters his presentation of differing views is fair while his own decisions are put forward modestly and in a manner to convince. The narrative is fully supported by references to the original authorities and use of the book is facilitated by a good index and copious cross-references. A large folding synchronistic table is particularly valuable, and a series of maps illustrates the volume.

The work offers few occasions for criticism, but some suggestions may be made for a second edition. It is hardly necessary to assume from the mentions of the Khaśas and of Bhoṭa that Yaśovarman reached the borders of Kashmir and Tibet (pp. 674, 676). The Khaśa race was found in Garhwāl, and the northern part of Kumāūn is known as Bhoṭ. In the account of the Kalacuris of Tummāṇa a reference should be made to the coins of three of their rulers published in *I.M.C.*, pp. 254-5. Coins of Gaṇapati of Narwar, said not to be known (p. 834, n. 1), have been published by Cunningham (*Med. India*, No. 10, p. 93), and in *Num. Supp.*, xxxiii, p. 84, while the known dates on Asalla's coins run as far as 1349 (= A.D. 1292), *vide Num. Supp.*, xl, p. 6, and do not stop at 1336 as stated at p. 1103. Two coins of Siddha Rājā, found at Pandwaha in the Jhānsī district, are probably connected with his indecisive contest with the Candella Madanavarman, and were published in *Num. Supp.*, vii, p. 51.

At p. 1038 Dr. Ray gives a full description of the interesting inscription from Verawal which was first published by Dr. Hultzsch in *I.A.*, xi, p. 241. But neither authority has referred to its importance as confirming an item in the list of kings of Harmuz given by Pedro de Texeira from a work now lost. While the inscription mentions an Amīr Rukunādīna as reigning on the coast of Haramuja in the year A.H. 662 (misprinted 622 at p. 1038), Texeira speaks (*Hakluyt.*, p. 158) of "Amīr Rōknadin Mahmud, son of Hamed, in whose time Harmuz throve greatly. . . . He reigned thirty-five years and died in the year of the Hyzara 676, that is, A.D. 1278".

Dr. Ray is inclined to doubt the genuineness of a coin published by Ojha in *Num. Supp.*, xl, p. 14, and assigned by him to Kālabhoja known as Vappa or Voppa. A rather similar coin was first read by Hoernle as Śrī Dhairyya Rāja (*Progs. A.S.B.*, 1881, p. 39), and then by me as Śrī Vighraha (*Num. Supp.*, i, p. 2). A. K. Ghosh prefers Ojha's reading to either of the others (*Num. Chron.*, 1933, p. 139), but I still think that Vighraha is correct, and would now assign it to one of the four Cāhumāṇa rulers of that name. The representation on the coin of a cow and calf is paralleled by the Sevadi inscription of a much later date which is mentioned at p. 1114.

Dr. Ray ends his book with an excellent summing up of the decline of Rājput power and the gradual penetration of northern India by Muslims and promises a short volume expanding these views which should be very welcome to students. One topic which will deserve fuller treatment is the question whether a difference in tactics facilitated the Muslim success. In much later contests success was sometimes achieved by "Mlecchas" through their taking advantage of the Hindu custom of relaxation and expecting a meal about midday.

R. BURN.

CERA KINGS OF THE SANGAM PERIOD. By K. G. SESHA AIYAR.
 9 x 6, pp. vii + 183. London : Luzac and Co., 1937. 6s.

This is a work bearing on the history of the Ceras during the period covered by the so-called *Sangam* literature of Tamil. This is a body of literature which has come down to us in a number of well-known collections, being quoted from time to time as authority for literary and other purposes by Tamil writers from a very early period. The collections that have come down to us happen to be more or less selections from a large mass of fugitive literature, generally taken to be illustrative of various modes of literary expression, both of feeling and action. Several of them are directly addressed and dedicated to patrons, monarchs, or chieftains according to circumstances, and make incidental references to contemporary events of importance. If they are carefully studied, classified, and arranged in order of priority and posteriority, it is possible to reconstruct the history of the Ceras of that period who played their own important part, and are even sometimes indirectly referred to by classical writers, as a brisk commerce had long been established between the Malabar coast and the West.

Mr. Sesha Aiyar, who is thoroughly qualified for the task, has made an attempt to build up that history in the first 122 pages of this little book. He takes one poem, the *Padiruppattu*, "The ten tens," all of them addressed to Cera kings as the basis, and draws information from other sources to supplement what is found in this classic. This work ought certainly to deal with ten Cera kings, but as the poems relating to the first and the last are lost, it actually deals only with eight. The order of succession of these rulers is not placed in the work altogether beyond doubt; but it is possible by a careful study to evolve some kind of an order from this work itself, and from information available in other works regarding rulers of other kingdoms contemporary with them, as well as the chieftains on the one hand, and the poets who composed poems in celebration of them. Mr. Sesha

Aiyar finds it possible to arrange them in chronological order, and has set them down in two tables. He arranges them as the Cēras who held rule over Vanji (generally identified with Cranganore, Kodungolūr), which in the course of its history found it necessary to set up a viceroyalty in the north, in Tonḍi, sometimes distinguished as Kuṭṭuvan Tonḍi (Tonḍi of the Cēras) to distinguish it from a Tonḍi on the east coast in the Cōla territory called Solan Tonḍi. Somewhat later in that history the conquest eastwards, which had begun at an early date, extended so far as to necessitate a viceroyalty at Tagadūr in the Salem district, the modern Dharmapuri. That is also included. The ruler of this in the early age is known by the term "Adihamān", a contemporary and the much favoured patron of the poetess Avvai, a number of whose poems to him are incorporated in this collection. She is said to have gone on an embassy from this Adihamān to Tonḍamān Ilān-Tiraiyan, which establishes an important chronological link. In this name, Adihamān, Mr. Sesha Aiyar seems to find an equivalent of the Satiyaputra of the Aśoka edicts. While philologically Adihamān may be derivable from Satiyaputra, it may not perhaps be quite safe to build upon this possible identification as yet.

Mr. Sesha Aiyar has interspersed his historical account with a number of extracts from the poems, several of which are rendered into poetical English, which adds considerably to the interest of the book.

The most important subject of investigation, however, in a study of this kind is the actual age of the works on the basis of which this history of the Cēras is constructed. Mr. Sesha Aiyar has devoted special attention to this question, which he deals with in a separate chapter, Chapter VIII, Chronology of the Śangam Cēras. The arrangement that he has come to seems on the whole satisfactory from many points of view, corresponding as this period does to the period of the prosperous commerce between the Malabar coast and the Roman Empire. But in the determination of the actual age of these works

he covers ground which has already received much attention, he himself having taken an important part in the discussion.

Writing of Cēra history, he has naturally to draw from the twin classics of Tamil, *Silappadikāram* and *Manimēkhalaī*, in regard to the date of which, at any rate as regards the latter, there has been much difference of opinion. Scholars are not yet agreed about it. He holds to the view that these works are of about the same age as the *Sangam* works. It is rather difficult to refute that view, and the objection that has been urged by Professor Jacobi and others in regard to the affiliation of the Buddhist logic of *Manimēkhalaī* to the *Nyāyapravēśa* of Dignāga may be surmounted by the assumption that the chapter underwent a revision at some later period to bring it up to date, which is quite possible, having regard to the fact that we have now more or less complete editions of the work *Nyāyapravēśa*. The cumulative effect, however, of various lines of evidence seems to indicate an early age for the two works, and the separation of the one from the other by any great length of time seems almost impossible, having regard to the character and contents of the works themselves. On the whole, Mr. Sesha Aiyar has made an important addition to the study of that important epoch of South Indian literary history known as the *Sangam* period.

S. KRISHNASWAMI AIYANGAR.

Art, Archaeology, Anthropology

FOUNDATIONS OF CHINESE MUSICAL ART. By J. H. LEVIS.

$9\frac{3}{4} \times 7$, pp. xiii + 233, pl. 1. Peiping, 1936. 21s.

The author of this book has pointed out that his relations with Chinese music dated from his earliest years ; he writes :—

“ With the natural advantage of being born and brought up in China and with over twenty-five years’ residence in the country, I had a singular opportunity to approach this music

with an intimate and natural psychological insight." On this account we might confidently expect success in the great task of revealing another branch of our art. It is no easy task, either! Myself a Chinese, and somewhat experienced in our ancient music, I am not ashamed to thank Dr. Levis for giving me the outline of a scientific study in it. When I was a College student, I took up the *Ku-Chin* (a seven-stringed lute) besides my regular work. At that time I had great difficulty in finding a good book on the subject, with fundamental and systematic information; most of them were far too elaborate for a beginner. Now for nearly ten years I have not touched my instrument, nor read a book on music, having spent most of my time on calligraphy and painting. Suddenly, this book of Dr. Levis' stirred up all my old pleasure and interest!

I have no space here to discuss the details, but I should like at least to recommend four points to the reader. In the first place, people in Europe and America are convinced that the Chinese language is the most difficult in the world to learn. I think the only real difficulty lies in the pronunciation, which depends on *tones*. Many Western sinologists have tried to devise good methods for interpreting the tones, but I am afraid no one system has covered every usage. Having taught Chinese myself for a few years, I have tried to elaborate our Chinese "Ping-tse system" instead of following Wade's. This "Ping-tse system" is now explained with considerable clarity on pp. 51-9 of this book. In his opening chapter, the author states:—

"Speech is intimately bound up with melody. . . . As Chinese melody is more strongly related to language than is the case with any other melodic system, this study has to be based very largely on the place of melody in language."

On Dr. Levis' thesis, the Chinese language should not be difficult to learn unless the student has no ear for music. The book is therefore very much worth while reading by all students of Chinese, and especially the chapters "Language

and Melody", "Music of the Chinese Language", "The Basis of Musical Composition", and "The Art of Musical Composition".

Secondly, most forms of the Chinese arts have been studied in the West for decades, but music has been omitted: this is unreasonable. We have a phrase 琴 棋 書 畫 which means in translation, "lute, chess, calligraphy, and painting"; it is applied to any cultured person, man or woman, who is expected to be capable in all four subjects. Clearly there is some link between them, and they should be developed simultaneously. Unfortunately events have made our lives different and difficult: the first two arts, lute and chess, have been neglected with us for long, while even calligraphy and painting make scant progress at the present time. I think all we Chinese ought to be grateful to the author of this book for introducing a new study of a branch of our arts to the world, and at the same time providing us ourselves with a scientific method of studying our ancient music with the help of Western musical notation. Dr. Levis is himself a successful composer, and we are aware that Western music with its superior development along harmonic, contrapuntal, and orchestral lines may help our progress a great deal. The chapters "Scale Structure", "Notation", and "Music-poems and Melodies" offer a comprehensive study along these lines.

Thirdly, the author explains in chapters 9 and 10, "The Reconstruction of Chinese Musical Art" and "Remarks on the Future of Chinese Music", in the frank and lucid terms of an expert, his own outlook on the Chinese Musical Art, and this must be of intense interest to both Chinese and Western readers. The statements may elucidate to Western musicians the distinctive qualities of the Chinese art, and to Easterners, how the more advanced phases of Western technique might be incorporated. I am in full agreement with the author when he propounds that our school of music must depend upon four major foundations: (1) the ancient art of musical

composition and concepts of form the foundations of which lie in the music-poems ; (2) distinctive elements of Chinese instrumental technique and tone-colour ; (3) folk-song ; (4) modern European developments adapted to Chinese needs.

Lastly, I approve of the author's standpoint that Chinese poetry has a profound and close connection with music. Many translations of Chinese poems have been published in European languages, but they are limited to one or two simple verse forms, and may mislead the reader into believing we have only a plain and restricted lyrical expression. Dr. Levis earns my gratitude in disclosing several other and varied forms such as *Yüeh fu* 樂府, *Tz'u* 詞, *Hsiao ling* 小令, *Chung tiao* 中調, *Ch'ang tiao* 長調, *Ch'ü tzü* 曲子 (*Pei ch'ü* 北曲 and *Nan ch'ü* 南曲), etc. I think this section will greatly help students of Chinese to appreciate the scope of our poetry.

As a whole, this book will prove to be of value not only to students of musical art, but also to all people interested in things Chinese.

A. 718.

CHIANG YEE.

UNE POÉTESSE JAPONAISE AU XVIII^e SIÈCLE, KAGA No TCHIYO JO. Par Mme GILBERTE HLA-DORGE, Docteur ès Lettres de l'Université de Paris, Diplomée de l'Ecole des Langues Orientales. Avec une Préface de Monsieur MICHEL REVON, Ancien Professeur à la Faculté de Droit de Tokyo, Professeur à la Faculté de Lettres de Paris. 10 × 6½, pp. 254, with a Table of Addenda and Errata. Paris : Librairie Orientale et Americaine, G.-P. Maisonneuve, 1936. Frs. 35.

This book was written primarily as a thesis for the degree of " Docteur ès Lettres " of the University of Paris. Its subject is the life and work of Chiyo-Jo, the most famous of a small band of women epigrammatists (by " epigram " is meant

"any little piece of verse that expresses a delicate or ingenious thought") who flourished in Japan during the seventeenth and eighteenth centuries. It is divided into seven chapters. The first is in the nature of a general survey of Japanese poetry, with emphasis on the epigram (*haikai* or *hokku*) ; the second continues the survey, particularizing on the women composers of *haikai* ; the third, fourth, and fifth are devoted to the life and work of Chiyo-Jo herself ; and the sixth discusses the characteristics of her verse. Attached to the last is an appendix containing 368 of her compositions.

Mme Hla-Dorge's essay is a very full and conscientious piece of work ; but unfortunately its usefulness is marred by an unusual number of typographical errors—particularly in the Japanese portions of the text—the result apparently of indifferent proof-reading. This blemish is the more to be regretted because every additional contribution to our still very scanty knowledge of the pre-Meiji literature of Japan is so heartily to be welcomed ; and this is the first study in a European language of Chiyo-Jo's work.

To quote some examples at random. *Ouraméshii* is written *ouranéshii* (p. 31) ; *nakéba, nabéka* (p. 44) ; *ou no hana, ou-no-kana* (p. 53) ; *koboshikéri, kogoshihéri* (p. 58) ; *yanaghi, yamaghi* (p. 84) ; *hotarou, hótari* (p. 97) ; *tonari, tomari* (p. 52) ; *Sagami, Sarami* (p. 134) ; *Ryōshöinn, Rōyshöinn* (p. 167) ; *hana, kana* (p. 172) ; *Açahi, Açaki* (p. 194) ; *mijikō, mjikō* (p. 217) ; *amadera, awadera* (p. 223) ; *souté okou funé, souté okou né* (p. 223) ; *kogarashi, koragashi* (p. 227) ; *kané, kamé* (p. 209) ; *tomoshibi, tomoshibi* (p. 191) ; *harai, karai* (p. 234), etc.

The system of transliteration is likewise confusing. *Mazoushii* (poor, needy) is a single word ; but *mazoushii zo* is written *mazou shiizo* (p. 73), *o tsoukou* is made one word *otsoukou* (p. 104), *kanôte*, from the verb *kanōbu*, is turned into *ka nôte* (p. 114), *yourousaji*, from the verb *yourousou*, is written *yorou saji* (p. 115), *sayo fouké-youkéba* distorted into *sayofuké youkéba* (p. 43), *sayo* (night) being an ordinary noun and

sayofouké meaningless, and *na no hana* written *nano hana* (p. 134). Instances of this kind are numerous. And why is "Hito towaba", the middle line of the poem beginning "Shikishima no" (p. 34) omitted, thus making the verse unintelligible?

Nor do all Mme Hla-Dorge's translations carry complete conviction with them. For instance, in the poem beginning "tchô tchô ya" (p. 191) the verb is in the indicative mood and not, as she translates it, in the imperative. Again, the meaning of the poem "Kaya no nami", etc. (p. 212), is surely that a chill wind blows the folds of the mosquito-net against the sleeper's face, thus reminding her that autumn has come and not, as in Mme Hla-Dorge's version, "les ondulations de la moustiquaire sont familières à la dormeuse." Other examples, some perhaps due to faulty proof-reading, might be cited; but on this point of translation it is prudent not to be too dogmatic because Japanese epigrams, particularly those of Chiyo-Jo, are often very difficult of interpretation; and as M. Revon very justly points out in the preface of the present work, they are prone to be "énigmes impossibles à déchiffrer sans le secours des commentateurs indigènes, dont les interprétations mêmes ne doivent être admises que sous réserve d'une critique très prudente".

At the end of the volume is an index of the first lines of poems by Chiyo-Jo quoted in the text; but its usefulness is much diminished by the fact that it does not include those given in the appendix to the sixth chapter.

It is to be hoped that if this work is reprinted it will first be subjected to careful revision and perhaps, if we might venture so to suggest, condensed a little.

PSYCHOMENTAL COMPLEX OF THE TUNGUS. By S. M.

SHIROKOGOROFF. $13\frac{7}{8} \times 10\frac{1}{2}$, pp. xvi + 469, pls. 12, ills. 30, including 6 pages of Tables of Schematic Representations of the Ethnic Processes, Glossary, List of Works quoted, Index of Authors and Investigators, Index of Spirits, Index of Ethnical Units and Groups, and General Index. London: Kegan Paul, Trench, Trubner and Co., Ltd., 1935. £2 10s.

This massive volume—it weighs $8\frac{1}{2}$ lb.—is in more than one way an amazing work. But it is obvious at once that no adequate review of the contents of this encyclopædia of the Tungus tribes, if I may fitly so call it, is possible in the space available.

Mr. Shirokogoroff has chosen for his book a rather arresting title. It may be described as combining the dubious glitter of the Unknown with the vague outlines of the Unfamiliar, for the word "psychomental" has not yet been admitted even to the supplement of the *N.E.D.*, while Tungus as an ethnic designation is probably beyond the purview even of the solvers of crossword puzzles. However, the author writes, Introduction, p. 1, "By the term 'psychomental complex' I name here those cultural elements which consist of psychic and mental reactions on milieu." But as to who the Tungus are, they form (this is not on Mr. Shirokogoroff's authority) a main branch of the Mongol division of the Mongol-Tartar family, and their domain covers many hundred thousand square miles in Central and East Siberia and in the Amur basin.

And it was to these groups of nomadic and hunting tribes that Mr. Shirokogoroff, a highly qualified and zealous ethnologist, betook himself in the interests of science in 1912 from St. Petersburg, as it then was, to which city he will probably never return. For some six years he lived with and among those little considered but very interesting people. Possessing the Russian facility for languages, he mastered the Tungus, apparently in more than one dialect. With that pass-key and

the power it gave him, he was able to converse freely on equal terms socially, and without that assumption of superior civilization so naïvely exhibited on one side in these racial contacts, so silently resented on the other, and so fatal, as the author shows, to a real intimacy, intellectual or spiritual, between the members of two alien ethnical groups. And so it came about that the Russian ethnologist gained the confidence and indeed the friendship of these hunters and nomads, both men and women. That is the secret of his success in collecting the astonishing mass of knowledge of things Tungus that fills the greater part of the 469 pages of this *magnum opus* of which the earlier chapters deal, and very copiously, with the methodological and schematic sides of ethnology in general.

The author begins, then, with a foreword of some eight closely printed pages, a mere *zachuska*, as Russians call it, to the meal that is to follow. Then comes the Introduction in three chapters of 48 pages, leading to Part I, "Positive Knowledge," in six chapters, of which part of one chapter, pp. 76-86, on "Psychology and Mentality of the Animals", is of great and unusual interest and value to zoologists, field naturalists, or big game hunters. I wish that I had space to quote some of the striking and suggestive passages occurring here. Part II is headed "Hypotheses", and also consists of six chapters, each dealing with the spirits that play so large a part in Tungus life and belief. Part III holds four chapters on the "Practical Consequences of Hypotheses".

In Part IV we reach Shamanism. This, much the longest of the four parts of the work, extends through twelve chapters of 161 pages, and presents probably the most complete and searching account of that social phenomenon, in part a tribal institution, in part a psychosis whether mass or individual, that has ever been contributed to the scientific community of the Western world.

We live no doubt in a complex-conscious age, but in the entire complexity of complexes recorded in the spacious pages of Mr. Shirokogoroff, there cannot be found such a complete

and complicated complex as the complex of Tungus Shamanism.

The volume ends with a conclusion in three chapters, a glossary, a list of works quoted, and four indexes, of which the General Index is of a fascinating fulness and variety.

L. C. HOPKINS.

Islam

THE DOCTRINE OF THE SŪFĪS (KITĀB AL-TA‘ARRUF LI-MADHHAB AHL AL-TAŞAWWUF). Translated from the Arabic of Abū Bakr al-Kalābādī by A. J. ARBERRY. 8½ × 5½, pp. xviii + 173. Cambridge : University Press, 1935. 10s. 6d.

Dr. Arberry's translation of this early and highly esteemed treatise, on which several commentaries have been written, makes a welcome supplement to his edition of the text published in 1934 at Cairo. Kalábádī died *circa* A.D. 995, so that the *Ta‘arruf* is nearly contemporary with the *Luma‘* of Sarráj and the *Qút al-qulúb* of Makkí. Though inferior to these works in extent and richness of material, it provides in seventy-five brief chapters a valuable critical conspectus of doctrines formulated by Sūfís during the third and fourth centuries A.H. The author's exposition, which lacks neither understanding nor subtlety, is combined—too obtrusively, in my opinion—with an attempt to prove that Sūfís are good orthodox Moslems. Here, indeed, he stands on tolerably firm ground ; for he wrote at a time when the traditional orthodoxy was no longer intact and could offer only a feeble resistance to the invading tide of mysticism : it is significant that he does not hesitate to call as a leading witness the arch-heretic, Halláj, though he avoids mentioning him by name and of course takes care that the evidence produced shall be of the right kind. These citations from “one of the great Sūfís” illustrate the value of the *Ta‘arruf* as a primary source. Prose theology is apt to be dry, but readers of

Kalábádhí will find refreshment in many poetical oases planted at intervals throughout the book. Dr. Arberry has given us a fine English translation in prose and verse. Every page shows how well equipped he is for his task. If some passages must be marked with a query owing to the uncertainty or obscurity of the text, there are few which it is easy to correct at first sight. I have noted the following details:—

p. 2, n. 2.—In this context “the sciences of inheritance” refer, not to Ḥadīth, etc., but to the Prophet’s esoteric knowledge which the Ṣūfīs claim to have inherited from him.

p. 4, l. 3.—*For “and with this came the spate of questions and answers” read “and inward feeling was replaced by dialectic”* (فصار الحال اجوبة ومسائل).

p. 8, l. 16.—*For “that he was the offspring of Khārijah’s daughter” read “that a child in the womb (ذٰ بَطْنٍ) was Khārijah’s daughter”*.

p. 55, n. 1.—*For “Adam” read “Muhammad”*.

p. 56, l. 16.—*For “I have set my delight” read “my delight has been set”* (جُعِلَتْ).

p. 79, l. 14.—*Read “Swiftness of ecstasy is realized when the conscience is not void of that which arouses ecstasy”*.

p. 92, l. 11 fr. foot.—*For “in a way he has never been” read “as (when) he was not”, i.e. in the state of non-existence before he was created. Cf. Junayd’s definition of the *tawḥid* of the elect (Qushayrī, Cairo, 1318 A.H., p. 160, l. 22 sqq.) and Ansārī’s commentary *ad loc.**

The introduction tells what little is known concerning Kalábádhí’s life, discusses the character and motive of his work, and describes the commentaries elucidating it. Some of these have been lost, but the translator has used the *Husn al-taṣarruf* by ‘Alá’uḍdín al-Qónawí in a Vienna MS. and the abstract (which is all that survives) of a Persian commentary by Ismá‘il al-Mustamlí. The former, as he points out, is wrongly assigned by Hágíjí Khalífah to the author himself. To conclude with a small contribution to the literary history

of the *Ta'arruf*, I may remark that two short excerpts (p. 4, l. 4 sqq. in Dr. Arberry's edition) are embodied almost verbatim without acknowledgment in the Arabic preface to Book I of the *Mathnawi* (p. 2, l. 4 seq. and l. 14 seq.).

R. A. NICHOLSON.

AN IMPORTANT MANUSCRIPT OF THE TRADITIONS OF BUKHĀRĪ
with nine facsimile reproductions. By †A. MINGANA.
12½ × 10, pp. 45, pls. 9. Cambridge: W. Heffer, 1936.
10s. 6d.

Dr. Mingana has accustomed us to expect the unexpected. This time he has found a MS. which differs widely from any known text of Bukhārī's famous *Sahīh*. Its most striking feature is that every ḥadīth begins *akhbaranā-l-Bukhārī* instead of *Bukhārī*, the author's *haddathanā*. The natural assumption is that B. is not the writer of this recension, especially when we are given the names of the two rāwīs—al-Marwāzī and al-Farabī—who intervened between the author and Bukhārī himself. Dr. Mingana thinks with good reason that the writer was Aṣilī.

The MS. only contains three books: *Zakāt* (complete), and *Ṣaum* and *Hajj*, incomplete. Dr. Mingana reproduces nine pages and compares the text of one *bāb* with the *textus receptus* from which it is clear (*a*) that the received text has been interpolated freely, and (*b*) that as late as the year A.D. 1000 the text had not been definitely established either as to content or order. In view of the persistent tradition of the pious care of Bukhārī in compiling his book this is somewhat surprising, as is the discovery that the familiar formula, qâla abū 'Abdullah, can be attributed to al-Farabī, who, says Ibn Khallikān, was the last survivor of those who attended Bukhārī's lectures. Dr. Mingana has added enormously to the value of his book by the careful table of transmitters and editors of the *Sahīh* he has provided.

Obviously the many problems which this important MS. raises can only be discussed when scholars have the full text before them. Dr. Mingana has written an illuminating and stimulating introduction, and it is sad to think that he will be unable to publish the full text of his MS. (Alas! no longer possible, *rahimahu 'llâh*).

A. 824.

A. GUILLAUME.

BHAKTI-BHĀNDĀRĪ BASAVANĀNAVĀRU. By M. R. SRINIVĀSA-MŪRTI. $7\frac{1}{2} \times 5$, pp. iv + 154. Bangalore, 1931.

From time to time various books have been written on the life and teachings of the Lingāyat apostle Basava. As the founder of Vīra-Saivism, Basava's name figures prominently among those who brought about the Hindu revival. In his book, Mr. Srinivāsamūrti deals more with the teachings and philosophy of Basava than with the life history of the apostle. He has presented to the students of Kannada Dēsa the tenets of Vīra-Saivism in a simple, readable style of Kanarese. It is in consonance with the present move in India to popularize the philosophy of the Hindu creeds.

C. S. K. PATHY.

KITÁB TABAKÁT AL-UMAM. By SÁ'ID AL-ANDALUSI. (Livre des Catégories des Nations.) Traduction avec Notes et Indices précédée d'une Introduction par RÉGIS BLACHÈRE. Publications de l'Institut des Hautes Études Marocaines, Tome XXVIII. $10 \times 6\frac{1}{2}$, pp. 189. Paris : Larose Editeurs, 1935. Frs. 30.

This work is a translation of the Arabic text of the *Tabaqátu'l-Umam* edited by Louis Cheikho (Beyrouth, 1912). Sá'id b. Ahmad, who died in 1070, as *qádi* of Toledo, was an Andalusian writer on historical and scientific subjects, and in this work he makes an ambitious, though largely unsuccessful, attempt to trace the development of scientific studies

among the nations of the world. He distinguishes the eight peoples which devoted themselves to learning, the Indians, Persians, Chaldaeans, Greeks, Latins, Egyptians, Arabs, and Hebrews, from the "unlearned" nations, the Chinese, Turks, Galicians, Berbers, etc. These last are dismissed in a short chapter; the "learned" nations receive a chapter apiece, in which Sā'id first describes the general characteristics, geographical situation, and history of the people, and then enumerates its men of science, with particulars, when available, of their lives and works. The "sciences" with which he deals are philosophy, mathematics (including astronomy and astrology), and the natural sciences (including medicine). Only two chapters, those on the Greeks and the Arabs, are sufficiently complete to yield information which is at all valuable. The rest are extremely summary and some for the most part legendary. Even in the chapter on the Greeks the chronology is in places wildly inaccurate. The longest and most valuable section is that on the Moslems in Spain.

The work is important, not as a source of information nor as a systematic presentation of its subject, but as reflecting the state of knowledge in eleventh-century Spain of non-Arabic philosophical and scientific writings; and as the source of many of the notices in Ibn al-Qiftī, Ibn Abī Uṣaibi'a, and other later writers.

The translation is excellent and takes account of MS. variants. The Introduction, biographical, analytical, and critical, soberly and justly estimates the value of the work. The index of technical terms should prove valuable especially to students of Arabic astronomical and astrological works.

Miscellaneous

LA TUNISIE DU NORD. LE TELL SEPTENTRIONAL. Étude de géographie régionale. By F. BONNIARD. Texte : pp. 534 ; Atlas : pp. xiii, pls. 88, maps 3. Pays et cités d'Orient, I. Paris : Paul Geuthner, 1934. Frs. 100.

The book is the result of long and thorough investigations made by the author on the spot. It surveys the "Tell Septentrional", i.e. the territory of North Tunisia between the Mediterranean and the River Medjerda. The volume containing the text details in parts i to iv the geological structure, morphology, climate, hydrography, economic geography, and anthropogeography of the territory. Part v, dealing with the indigenous population, and part vi, with the Europeans, closely interest Orientalists ; on the authority of classical and Arab geographers and historians the author reviews the history and the present status of the population and describes their habits and dwellings. A separate volume, the Atlas, contains good photographs, diagrams, and charts on 88 plates, and 3 maps, among them a detailed map of North Tunisia on a scale 1 : 200,000.

The author has done a valuable service to science in writing an extensive monograph on a territory about which there are not many reliable documents. His book is the first volume of a series of reference-works on Oriental countries and cities. We await the subsequent volumes with keen interest.

JOSEPH DE SOMOGYI.

PUBLICATIONS DU SERVICE DES ANTIQUITÉS DU MAROC.

Sous la direction de LOUIS CHATELAIN. Fascicule 1.
Protectorat de la République Française au Maroc,
Gouvernement Chérifien. $8\frac{1}{2} \times 7$, pp. viii + 89, pls. 7,
figs. 6. Paris : Paul Geuthner, 1935. Frs. 50.

The *Service des Antiquités du Maroc* has started the publication of a series of documents and papers on the main results of its researches and excavations. The present first

volume contains an article by L. Chatelain on the newly discovered mosaics of Volubilis, the description by R. Thouvenot of the thermal baths named after Galen at Volubilis, a notice by A. Ruhlmann on a plaque designed for military use and found at Thamusida, a notice by R. Thouvenot on a bronze tablet discovered at Banasa, the description by A. Ruhlmann of an engraved stone and a tumulus found at Djebel Sirwa, and the first part of an inventory, by L. Chatelain, of the mosaics of Morocco.

The volume, containing illustrations on separate plates and in the text, is of great use for archæologists investigating Moroccan antiquities.

A. 633.

JOSEPH DE SOMOGYI.

SUPPLEMENT TO ARABIC DICTIONARIES MS. By the late Professor A. A. BEVAN.

Arabists will be interested to learn that the late Professor A. A. Bevan's MS. "Supplement to Arabic Dictionaries", a work which occupied him during the last five years of his life, has been presented by his brother, Dr. E. R. Bevan, to the Cambridge University Library, in order that it may become accessible, in all ways permitted by the Library regulations, to British and foreign scholars who wish to utilize it. Beginning with ^ا and ending with ^خر^عب, the two volumes contain over 600 neatly written folios (1,200 pages), and give references to about 200 separate works. For the most part, these are Divans of pre-Islamic and Moslem poets, but prose writers are not excluded, e.g. Abú 'l-Fidá, Maqrízí, Maqqarí, Sha'rání, Ibn al-Jawzí, Ibn Baṭṭúṭa, and Ibn Khaldún. While every one must regret that Bevan did not live to complete and publish the Dictionary under his own name, future successors to Lane and Dozy can do what would have pleased him just as well—make full and free use of the rich material which he has left behind in his greatest contribution to Arabic lexicography.

FONDATION DE GOEJE

Le Conseil de la Fondation de Goeje n'a pas subi de modifications depuis novembre 1936, et est donc composé comme suit : M. A. J. Wensinck, président ; MM. Tj. de Boer, J. L. Palache, P. Scholten et C. C. Berg, secrétaire-trésorier. Le capital de la fondation étant resté le même, le montant nominal est de 24,350 florins.

La fondation publia, en 1937, le numéro 11 de la série de ses publications, *Materials for the History of the Text of the Qur'an*, de M. Arthur Jeffery, du Caire. Le Conseil est heureux d'avoir pu faire paraître cet ouvrage important. Des exemplaires ont été offerts à plusieurs bibliothèques publiques et privées ; les autres exemplaires sont en vente chez l'éditeur au prix de 10 florins.

De la douzième publication, l'édition d'*ar-Rawd al-Mi'tār*, traitant la géographie de l'Espagne musulmane du moyen âge, le texte arabe a déjà été imprimé ; le Conseil espère que l'introduction française puisse paraître chez l'éditeur Brill au cours de 1938.

Le Conseil est heureux de pouvoir subventionner de nouveau la publication importante de M. A. J. Wensinck, *Concordance de la tradition musulmane*.

Des dix publications antérieures de la fondation il reste un certain nombre d'exemplaires, qui sont mis en vente au profit de la fondation chez l'éditeur Brill, à Leyde, aux prix marqués : (1) *al-Buhturī, Ḥamāsa*, éd. Geyer-Margoliouth, 1909 (fl. 96.—) ; (2) *al-Mufaddal ibn Salama, Fākhīr*, éd. Storey, 1915 (fl. 6.—) ; (3) I. Goldziher, *Streitschrift des Gazālī gegen die Bātinijja-Sekte*, 1916 (fl. 4.50) ; (4) A. J. Wensinck, *Bar Hebraeus's Book of the Dove*, 1919 (fl. 4.50) ; (5) C. van Arendonk, *De opkomst van het Zaidietische Imamaat in Yemen*, 1919 (fl. 6.—) ; (6) I. Goldziher, *Die Richtungen der islamischen Koranauslegung*, 1920 (fl. 10.—) ; (7) S. van den Bergh, *Die Epitome der Metaphysik des Averroes*, 1924 (fl. 7.50) ; (8) G. Levi della Vida, *Les "Livres des Chevaux"*

de *Hišām ibn al-Kalbī et Muḥammad ibn al-Ārabi*, 1928
(fl. 5.—); (9) D. van der Meulen et H. von Wissman, *Hadramaut*, 1932 (fl. 9.—); (10) J. Schacht, *Das Konstantinopler Fragment des Kitāb Ihtilāf al-Fuqahā' des Abū Ḥaḍar Muḥammad ibn Garīr at-Tabarī*, 1933 (fl. 4,80).

Leyde, le 28 novembre 1937.

C. C. BERG.

OBITUARY NOTICE

Alphonse Mingana

On Sunday, 5th December, at the age of 56, Dr. Mingana succumbed to an illness which had been troubling him for many months. He had crowded into his life work which would have provided adequate occupation for several scholars with many more years at their disposal.

Born near Mosul in 1881 he was Professor of Semitic languages in the Syro-Chaldean Seminary 1902-1919, for many years Assistant Keeper of Oriental MSS. in the John Rylands Library, Manchester, and in 1932 came to Birmingham to take charge of the great collection of Oriental MSS. and antiquities which he had made in his repeated expeditions financed by Mr. Edward Cadbury, who also founded a home for them in the Woodbrooke Settlement. Three of these expeditions were executed in the years 1924, 1925, and 1929, and extended over Syria, Persia, Iraq, the Sinaiitic Peninsula and Egypt, Lower and Upper. The wealth of these collections is astonishing ; his Catalogue of the Syriac MSS. contains over 600 items, and that of the Christian Arabic MSS., over 800. He had calculated that the cataloguing of the Muslim Arabic collection would take ten years. The six stately volumes of *Woodbrooke Studies* and other publications for which he somehow found time have given the world documents of unique importance for the history of Christianity, and also for the history and theology of Islam. He was most generous in accordinng the use of the materials which he had amassed with so much skill, courage and endurance to students throughout the world. When on the staff of the John Rylands Library he made many valuable contribution to its *Bulletin* from its treasures, and had the merit of discovering and publishing with translation the earliest defence of Islam from the Jewish and Christian

Scriptures, the *Book of Religion and Empire* by Ibn Rabban, which furnished material for the later apologists.

From the expert notice of his life and work which appeared in the *Birmingham Mail* of 6th December, and which, it is to be hoped, may be reproduced in a more accessible and permanent form, two sentences may be quoted here. "His exceptional intellectual attainments, his charming, unaffected personality, the single-minded devotion to research and authorship which had earned world-wide fame, combined to justify the assertion that Dr. Alphonse Mingana was rare among men." "He carried lightly a great profundity of knowledge, and his scholarly eminence was modestly concealed by a warm and friendly disposition."

D. S. MARGOLIOUTH.

NOTES OF THE QUARTER

Lidzbarski Trust

At the Oriental Congress held in Rome on 23rd-29th September, 1935, Professor P. Kahle of Bonn University made the following announcement: Professor Mark Lidzbarski, well known as an authority on N. Semitic Epigraphy and Mandaic literature, who died in 1928, left by his will a sum of money sufficient to provide a prize of 5,000 gold marks to be awarded for some extensive work dealing with Semitics, especially archaeology and the science of religion, the subject of such work to be announced at every second international Congress of Orientalists, and the prize awarded at the following Congress.

He desired that a Committee for the choice of subjects and assignation of the prize should consist of four persons, of whom the German and the American Oriental Societies, the French Société Asiatique and the R.A.S., should each appoint one. Administration of the Trust was to be in the hands of the Prussian Kultusministerium, which commissioned Professor Kahle, as manager of the D.M.G., to approach the other Societies. That Society appointed Professor Enno Littmann of Tübingen to serve on the Committee; the S.A., Mons. R. Dussaud, Membre de l'Institut; the American O.S., Professor Ch. Torrey of Yale University; and the R.A.S., Professor D. S. Margoliouth of Oxford.

It was further desired in the will that, at those Congresses at which no prize was awarded, a medal should be presented to some Orientalist of special merit.

The subject selected for a prize composition is "Die Erweiterung unserer Kenntnisse der Aramäischen Dialekte seit Theodor Noeldekes Veröffentlichungen."

Competitors should send in their works to the Geschäftsführer of the Deutsche Morgenländische Gesellschaft not later than six months before the next International Congress of Orientalists, which is to be held in Brussels.

Dr. B. C. Law Trust Series of publications under the Royal Asiatic Society

By the generosity of Dr. Bimala Churn Law, of Calcutta, a Trust has been founded to facilitate the publication of original literary contributions on Buddhism, Jainism, or the History or Geography of Ancient India up to the end of the thirteenth century A.D.

The first period during which MSS. may be submitted by competitors will close on 31st December, 1938. Details are given in the loose sheet enclosed but they may also be obtained on application to : The Secretary, Royal Asiatic Society, 74 Grosvenor Street, London, W. 1.

Notices

Copies of every article published in the *Journal* are available for purchase at the time of publication. In the case of a few of the older *Journals* the copies of certain articles are sold out, but in most cases they are still obtainable. The cost varies in accordance with the number of pages and plates ; the average price is about 1s. 6d. each.

As it has been found necessary to reduce the number of pages in the *Journal of the R.A.S.* for the present, the space available for reviews of books has been proportionately restricted, and the Editor regrets that he is unable to publish a review of every book presented to the Library of the Society.

The Council has decided that, until further notice, the Scheme for Transliteration of Sanskrit, Arabic and other alphabets (January number) and the List of Members (July number) shall be published every third year.

Forthcoming Events**ARCHÆOLOGICAL EXPEDITION**

The following Archæological Expeditions are reported to be undertaking work during the current season.

UNIVERSITY OF LIVERPOOL

TURKEY.—Souk sü Hüyük, Near Mersin, Cilician Plain : Professor John Garstang.

COLT ARCHÆOLOGICAL EXPEDITION

PALESTINE.—The Negeb : H. Bunscombe Colt. Under the auspices of the British School of Archæology in Jerusalem.

MUSÉES NATIONAUX ET L'ÉCOLE DU LOUVRE

EGYPT.—Medamond and Tanis : M. Bisson de la Roque. *Collaborators* : Institut Archéologique du Caire.

SYRIA.—Ras Shamra, Tell Ariri Mari, Le petit Siméon, Antioch : M. le Pasteur Parrot, M. Ghirshmann, Le Rev. Père Masserai. *Collaborator* : Princeton University.

CRETE.—M. le Pasteur Parrot.

AMERICAN SCHOOL OF ORIENTAL RESEARCH

TRANSJORDAN.—(Central), Moab : (South), Khirbet el-Tannur : Mr. Nelson Glueck.

BOSTON MUSEUM OF FINE ARTS

EGYPT.—Dr. George A. Reisner. *Collaborator* : Harvard University.

IRAN.—Persepolis : Dr. Erich F. Schmidt. University of Pennsylvania and Oriental Institute of Chicago.

METROPOLITAN MUSEUM OF ART, NEW YORK

EGYPT.—Thebes : Dr. Ambrose Lansing and Mr. Harry Burton.

IRAN.—Nishapur, Khurasan : Mr. Joseph M. Upton.

ORIENTAL INSTITUTE OF CHICAGO

EGYPT.—Luxor (Inscriptions) : Dr. Harold H. Nelson.

PALESTINE.—Megiddo : Dr. Gordon Loud.

SYRIA.—Tell Tainat (Antioch) : Dr. C. W. McEwan.

PRINCETON UNIVERSITY

SYRIA.—Daphne, Seleucia : Professor W. A. Campbell. Under auspices of Committee for Excavation of Antioch and its Vicinity and in co-operation with : Musées Nationaux de France, Baltimore Museum of Art, Fogg Art Museum, Princeton University, and Worcester Art Museum.

August, 1938. The Second Reunion of the International Congress of Anthropological and Ethnological Sciences will take place at Copenhagen, between 1st and 6th August, 1938.

An expedition conducted by Miss Freya Stark, who was awarded the Society's Burton Memorial Medal in 1934, and Miss Caton Thompson, with Miss W. E. Gardner as geologist and physical geographer, is visiting Hadhramant, during the winter months, for the purposes of exploration and archæological and physiographical research.

Royal Asiatic Society's Library

The Royal Asiatic Society has been affiliated to the National Central Library, Malet Place, London.

This means that a member of the R.A.S. may borrow any book from any other library in the United Kingdom which is itself affiliated to the National Central Library.

As there are some 150 libraries so affiliated, the scope for borrowing scientific or rare books is very materially increased.

INTRODUCTION

THE *Risālat al-Laduniyya*¹ is a short treatise giving an account of al-Ghazālī's religious philosophy, in a compact form. It includes his theory of Knowledge, which is discussed very fully in regard to its nature, its different types, and the

¹ Numbered No. 40 in Brockelmann's *Geschichte der Arabischen Litteratur* (vol. i, p. 423). It has been printed in Cairo (A.H. 1343) and from this edition I have made my translation, after collation with the India Office MS. 612, which gives a better reading in several instances. There are also Cairo texts printed in A.H. 1328 and A.H. 1353 (the latter in the collection entitled *al-Jawāhir al-Ghawātī*). It is found in MS. under the title of "Fi bayān 'ilm al-Laduni", Berlin, 3210. It seems to be generally accepted as a genuine work of Ghazālī and is included among his writings by Ḥāfiẓ Khalifa; the theory of Knowledge set forth here and the psychological doctrine are almost identical with those of the *Iḥyā' 'Ulūm al-Dīn*.

means by which it is acquired. The author gives special attention here to Revealed Knowledge and distinguishes between Revelation (وَحْيٌ), which was limited to the prophets and ceased with them, and Inspiration (إِلَامٌ), which is granted also to the saints and is, in fact, the awakening of the individual, human soul, by Universal Soul.

Ghazālī also touches here upon the possibility of attaining transcendental knowledge during sleep (cf. pp. 359 and 366 below), a possibility admitted by Muhammad himself, and evidently of great interest to Muslim writers.¹ In the *Kīmīyā' al-Sa'āda* Ghazālī expresses this belief more plainly, where he writes : "In sleep the gate of the senses is closed and the gate of the inner world is opened to the sleeper, and the mysteries of the Divine World and the Preserved Tablet are revealed to him, as by a radiant Light."

The treatise also includes a full consideration of the nature and origin of the human soul, its capacity to apprehend Universals, and the immortality which is inherent in its spirituality. The relation of the soul to the body is also clearly defined.

The chief interest of this little work lies, perhaps, in the fact that Ghazālī here frankly accepts a doctrine which is so close to the Plotinian theory of emanation that it is hardly

¹ Cf. Ibn Khaldūn, i, p. 211, and D. B. Macdonald's discussion of the question in *The Religious Attitude and Life in Islam*, chapter iii.

² p. 14. It is interesting to compare the view of a modern mystic (George Russell) : "I do not know of any psychology which so spiritually excites me as this of the nightly return of the soul to the Divine order, that we who through the day are absorbed in petty labours do go back to an unfallen world, unto our own high magnificence and are in council with the Cosmocratores. There are many who have symbolic dreams and if they brooded on them I am sure they would come to have faith in that dweller in the innermost . . . how many times when I meditated before sleeping did I not seem to myself to be sinking into light. How often when waking had I not the feeling that I had been cast forth and was rejected by heaven. . . . I tried passionately from departing lights, fleeting visionary presences and intuition, to conjecture what wonders the soul may have known, with what beings it may have been in some high companionship." A. E., *Song and its Fountains*, pp. 87, 109, 118.

to be distinguished from it and, while insisting on the Muslim doctrine of the Unity, he yet includes here a Trinitarian view of the Godhead, in which the first Person is the Absolute One, the second Mind, and the third Soul, though this is not a Trinity involving equality of Persons.

In this treatise Universal Mind (العقل الـ^{أكـلـ}) takes the place of the mysterious مطاع of the *Mishkāt al-Anwār*,¹ that which is the noblest, most perfect, and strongest of all Existences, and nearest of all to Absolute Deity. It would appear, then, that Universal Soul (النفس الـ^{أكـلـ}) here corresponds to the Angelic Movent (المـلـكـ الـحـرـكـ), who carries out the command of the *Mutā'* of the *Mishkat*.² In the latter Ghazālī compares the Angel with the Moon, and the *Mutā'* with the Sun, and in the *Rasā'il Ikhwān al-Safā'* (to which, as we shall see, Ghazālī is considerably indebted for both terminology and conceptions), we find that the relationship of Soul to Mind is compared with the relationship of the moonlight to the light of the sun, and the relationship of Mind to the Creator, with the relationship of the sunlight to the Sun itself, a relationship and a comparison which certainly suggests the doctrine of emanation.³

¹ For different interpretations of the *Mutā'* cf. R. A. Nicholson, *The Idea of Personality in Sufism*, pp. 44 ff., and W. H. T. Gairdner, *Der Islām*, 1914, pp. 121 ff. and 144 ff., and his *Mishkāt al-Anwār*, pp. 10 ff.

² p. 144 (Cairo edition).

³ A doctrine of which Ibn Rushd definitely accuses Ghazālī: cf. *al-Kashf 'an manāhij al-adilla*, p. 57, and it is no doubt to Ibn Rushd's accusation that Ibn Tufayl refers, saying: "Some later writers have read a grave signification into the words that occur at the end of the *Mishkāt*, to the effect that those who Attained-to-Union are convinced that this Existential One can be described by attributes inconsistent with pure Unity, inferring from this that al-Ghazālī asserted that the First Being, the Reality Who Alone is worthy to be glorified, admitted of multiplicity in His essence, which God forbid." *Hayy b. Yaqzān*, p. 14. In the *Sirr al-'Ālamayn wa Kashf mā fi'l-Dārayn*, attributed to Ghazālī, the doctrine of Emanation is taught without equivocation, for there it is stated plainly: "The First Emanation from the First Cause diffuses itself (reading ينـاشـي by means of a conceptual outflow) (الـفـيـضـ الـوـهـمـيـ) whereof our intellects

In his *Kitāb fīhi al-Ma'ārif al-'Aqliyya*,¹ which may have preceded this—since Ghazālī there gives some explanation of his use of these Neo-Plotinian terms, while here he uses them as if expecting their connotation to be clear to his readers—he states that Universal Mind is the Prior of all existences, Unique, Unconditioned (مطلق), itself Perfect through its relationship to the One, making perfect that which comes after, by its grace and mercy,² while next to it comes Universal Soul, the Giver of Life to all living things.³

In this *Risāla* Revelation and Inspiration are stated to be the “outflow” (فاضة) of Universal Mind, and the irradiation (إشراق) of Universal Soul, yet twice in this treatise Ghazālī states that revealed knowledge and “knowledge from on high” (العلم الطلق), which is the fruit of inspiration, come direct from God Himself (cf. pp. 363, 365 below),⁴ and are like the “radiance from the Lamp of the Invisible”, an outpouring (فيض) of the Divine Light. It would seem, then, that Universal Mind is the Vicegerent of God, sharing in the Divine Attributes and Functions,⁵ and cannot apprehend the essential nature. The First Emanation proceeding from the Ultimate Cause is the Active Intellect, which proceeds from it in totality, and Universal Soul is that from which (individual) souls emanate” (p. 32). This work is accepted without question as being Ghazālī's by Ahlwardt, but its authenticity is doubted by both Professor R. A. Nicholson (to whom I am indebted for the translation of this passage) and Professor D. B. Macdonald. In this passage the term صدر عن is used for “emanation” and for a discussion of Ghazālī's use of this term and of فاض من cf. W. H. T. Gairdner, *Der Islām*, 1914, pp. 121 ff.

¹ MS. Bodleian Pocock 263, fols. 6b–22b.

² Fol. 11b and فیض, رحمه, both of these being terms used by Ghazālī of the Supreme Himself.

³ Ibid. Cf. also *Mi'rāj al-Sālikīn*, pp. 24 ff.

⁴ Cf. *Kimiyyā' al-Sā'ida*, pp. 16, 17. “The knowledge possessed by the saints enters their hearts direct from the Creative Truth Himself.”

⁵ Cf. *Dabistān*, iii, p. 283, where it is stated that the Sūfis hold that after the Absolute Being comes Universal Mind, “which encloses all realities which are (as it were) concrete in it: it is the truth of mankind and between it and the Divine Majesty there is no mediator, according to the wise.”

that Universal Soul, which is "after" and "from" Universal Mind, partakes, too, in its measure, of Deity.

This is hardly the doctrine of an orthodox Unitarian, but al-Ghazālī did not claim to be consistent. In the *Mizān al-'Amal* he states that the opinions held by a man are three : (i) That which is shared with the vulgar and is in accordance with their view. (ii) The opinion given to anyone who comes asking for guidance. (iii) The opinion which a man shares with his own soul, which is not disclosed except to one who himself holds it.¹ Ibn Tufayl, while full of admiration for Ghazālī, admits that in what he addressed to the public, "he bound in one place and loosed in another, and denied certain things and then made exceptions (to his own denials)."²

THE PLOTINIAN DOCTRINE

Plotinus (born in Egypt at the beginning of the third century of the Christian era), like all true mystics, upheld the doctrine of the essential unity of the universe. God, he taught, is not external to anyone, and throughout the Universe there is a movement down from God towards man and a movement up from man towards God. This view of the Divine immanence and the constant attraction between God and man is upheld by Ghazālī in this treatise. (Cf. pp. 199, 200, 363, 370 below.)

The first principle in the Plotinian Godhead is Primeval Being, the Source of all being, the One, the All-Perfect (cf. pp. 191, 194, 363, 365 below). From this Primeval Principle the first emanation is Universal Mind, the Over-Mind of which all minds partake (cf. pp. 197, 363, 365 below). From Universal Mind comes the second emanation, Universal Soul, which is manifested in individual human souls and gives existence to the phenomenal world (cf. pp. 197, 199, 361, 365 below).

By the same way by which it descended from its Source, Plotinus teaches, the individual soul can ascend thereto again. It must seek to come to itself by the process of purification, the elimination of vice and the practice of virtue, which will

¹ p. 162.

² Op. cit., p. 4.

lead it up to God. It must rise above passion and self-seeking, it must detach itself from the downward drag of the body, from the system of sense with its earthly desires and impulses—all of which tend to mortality and corruption—and seek to be restored to the unity of Universal Soul (cf. pp. 200, 369 ff., 372 below). But the soul needs to ascend still higher to that which is nearer to the Absolute One than Universal Soul, to Mind, after whom, and from whom, Soul is. Then the soul, raised to the Intellectual-Principle, finds the actuality of what is potential within it and can attain to all knowledge. “All things are transparent and there is nothing dark or resistant, but every being is manifest to every other.”¹ (Cf. pp. 198, 361, 363, 365, 367 below.)

But the final goal, in the Plotinian teaching, is the Absolute One, the Primal Source of the soul, and, to attain it, the soul must divest itself of all that it has assumed in its descent until it has passed beyond all that is other than God, and looks at last upon the Divine Vision. Then it has reached the end of its quest, it has attained to the Unitive life, and has returned again to its Divine Origin. “The soul restored to Likeness goes to its Like and holds of the Supreme all that Soul can hold . . . by this way (that leads to God) it finds itself . . . it abandons Being to become a Beyond-Being . . . man knows himself now to be an image of the Supreme . . . this is the life of God and of Godlike men, a life without love of the world, a flight of the Alone to the Alone.”²

To this final consummation Ghazālī makes little allusion in this treatise, though it is evidently in his mind. It is one of the incommunicable mysteries into the discussion of which it is not lawful to enter, though he writes of it more plainly in other treatises (e.g. the *Mishkāt al-Anwār* and the *Rawdat al-Tālibīn*). Unification (تَوحِيد) he will admit, but the possibility of identity (التجان), which is the Plotinian Union, is not to be acknowledged openly by one who reckons

¹ *Ennead*, v, 8, 4.

² *Ibid.*, vi, 9, 11.

himself an orthodox Muslim. Yet Ghazālī approaches the subject here and brings Qur'ānic evidence to bear on the origin of the human spirit as being one with the Divine (cf. pp. 197 ff. below); he accepts the fact that it is able to contemplate the Invisible, that it can receive of the Divine Radiance without mediation (cf. p. 365 below), that it may attain to wisdom, victory, perfection (pp. 372, 373 below), to the exercise of supernatural power even in this world, and to immortality, which is the life of God Himself (cf. pp. 198, 369 below).

THE DISSEMINATION OF THE DOCTRINE

While still a student Ghazālī made it his business to secure a thorough knowledge of the system of philosophy which had been developed in the East, on a Greek foundation, and he carried this study still further while occupying his Chair of Divinity at the Nizamiyya College in Baghdad. Then, during his sojourn in Syria, for the experiential study of Ṣūfism, and during his later travels, and especially during his residence in Alexandria, he was in close contact with Hellenistic culture.¹

Though he publicly rejected the system of the philosophers and stated his conviction that true religion must be based on the experience of the soul, enlightened by revelation from above, thus accepting the doctrine of the Ṣūfis, yet his mysticism was undoubtedly affected by philosophic speculations and chiefly by the doctrines of the Neo-Platonic school. These were available to him, as to other Arab scholars, in the so-called *Theology of Aristotle*, a translation of Porphyry's commentary on the *Enneads* (iv, v, vi) of Plotinus, of which the earliest version in Arabic appeared in A.D. 840. A number of the philosophical terms used in the *Risālat al-Laduniyya*, such as Universal Mind (العقل الطلق) and Universal Soul

¹ For a full and most illuminating life of Ghazālī, cf. D. B. Macdonald, *Journal of the American Oriental Society*, vol. xx, 1899, pp. 72 ff.

(النفس الكنية) and the description of the soul as an immaterial substance (جوهر مجرد), together with whole phrases employed by Ghazālī, are found in the *Theology* (cf. pp. 191, 193, 194, 197, 198, 372 below).

al-Kindī (born before the middle of the ninth century, died 260/873), who was known to his contemporaries as "The Philosopher of the Arabs", made use of the *Theology* and developed the doctrine of the Godhead manifesting itself first through Mind and then Soul, the Universal Soul from which the human soul is an emanation. He also emphasizes the fact that the soul is a simple and imperishable substance, united with a body, but independent of it (cf. pp. 193, 197, 198 ff. below). He lays stress on the capacity of the Mind—synonymous with "soul", "spirit", and "heart", the essence of man—to conceive of the Universal, the spiritual Form. All of this is stressed here by Ghazālī (cf. p. 194 below).

The philosophy first systematized by al-Kindī was developed by al-Fārābī (ob. 339/950),¹ whom Ghazālī regarded as representative, with Ibn Sīnā, of the Islamic philosophers.² He also accepted the so-called *Theology of Aristotle* and made use of it, believing it to be genuine, and he, too, accepts the Plotinian theory of emanation. The human soul gives completion to the body (cf. pp. 193, 200 below). The potentiality within the human spirit, he holds, is brought to actuality by Universal Soul, so that man's knowledge is a contribution from above, not something which he acquires by his own effort (cf. pp. 368, 370 below). In the light of that supernatural knowledge man is able to understand the inner meaning of corporeal forms and thereby what he perceives with the senses is developed into rational knowledge (cf. p. 367 below). al-Fārābī also indicates the longing of the soul for what is above it and its final absorption into the One.³

¹ For an interesting recent study of al-Fārābī cf. I. Madkur, *La Place d'al-Fārābī dans l'école philosophique musalmane* (Paris, 1936).

² *Munqidh min al-Dalāl*, p. 11.

³ On both al-Kindī and al-Fārābī cf. T. J. de Boer, *History of Philosophy in Islam* (tr. E. R. Jones), pp. 97 ff.

al-Farābī's teaching, and the Neo-Platonic doctrines in general, were incorporated into the great Encyclopædia of the Brethren of Purity, an association formed at Basra in the second half of the tenth century. Although Ghazālī refers with great contempt to the *Rasā'il Ikhwān al-Safā'* and its teaching as being "flimsy" and "shallow",¹ yet he seems to have made considerable use of it, for ideas and actual phrases included there are found not only in this *Risāla*, but elsewhere in his writings.² In the *Rasā'il* the Plotinian doctrine of emanation is again set forth, the first emanation being the Creative Spirit (Universal Mind) and the second Universal Soul, the relation of Soul to Mind, as we have seen above, being likened to that of the moonlight to the sunlight, while the relation of Mind to the One is like that of the sunlight to the sun. From Universal Soul emanates the human individual soul, which is simple, self-existent, able to know and act, and the *Rasā'il* describes how the potentiality within the soul is brought to actuality and how the rational soul delights in knowledge and understanding (cf. pp. 191, 194, 200, 361 below). The *Rasā'il* includes also a section on Revelation (وَحْيٌ) and Inspiration (الْإِلَامُ), with which Ghazālī deals so fully in this treatise (pp. 363 ff. below), and it shows how souls can be fitted to receive revealed knowledge, only by purification (cf. pp. 363 ff. below).

Ibn Sīnā (370/980–428/1087) the other representative of Islamic philosophy mentioned by Ghazālī,³ teaches the existence of a First and Necessary Being, the One, from Whom, by a process of emanation, Mind and Soul proceed. He is chiefly interested in the Soul, which he holds to be a simple essence, imperishable, rational, having no essential connection with the body.⁴ In his *Qaṣīda* on the Soul he maintains that

¹ *Mungidh*, p. 19.

² Cf. references below.

³ Cf. also Shahrastānī, "the School of Aristotle and his followers, such as Proclus, Alexander of Aphrodisias, and Themistius, to whom moderns like al-Farābī and Ibn Sīnā among Islamic followers pay allegiance," *Nihāyat al-Iqdām*, p. 1 (ed. A. Guillaume).

⁴ Cf. pp. 196 ff., below.

the soul is a prisoner in this world, to which it has descended from the world above, being “exalted, ineffable, glorious, heavenly”. Slowly it grows accustomed to this desolate sphere. When at last the veil is raised and it looks once more upon the Invisible, it is filled with joy, and having become purified from all stain of the flesh, and made aware of the inner meaning of all things, it returns whence it came.¹ The soul, he teaches, gains knowledge of the outer world by means of the External and Internal Senses, which are situated in the brain—in the forefront the General or Co-ordinating sense, in the middle the Apperception, in the back of it Memory (cf. p. 199 below). Through the exercise of the Reason what is potential within the soul reaches actuality, through the enlightening influence of Universal Soul, in accordance with the degree of receptivity within the soul and its state of preparedness, which is the result of the practice of the virtues (cf. pp. 365, 371, 373 below).

PURPOSE AND GENERAL CONTENTS OF THE RISĀLA

This little treatise was written, as the author states in his introduction, at the request of a friend who desired him to deal with the revealed knowledge of Divine things, the existence of which was denied by certain of the orthodox theologians, who could conceive of no knowledge beyond that acquired by human effort.

The *Risāla*, therefore, deals primarily with Knowledge, and since the Soul is that by which the human being is enabled to know, the author, after defining Knowledge, proceeds to discuss the origin, nature, and capacities of the Soul, and states that his own use of the term is limited to the “rational soul”, known also as the “spirit” and the “heart”.

The author then deals with the different types of Knowledge and their branches, including the knowledge of the Sūfis, and proceeds to consider the different methods by which Knowledge can be acquired, from without and from within.

¹ Ziyā Bey, *Kharābāt*, i, pp. 283, 284.

He discusses the capacity of the human soul for the acquisition of Knowledge and shows how human souls vary in regard to their receptivity and the degree to which their original capacity has been affected by infirmity acquired in this world. In conclusion he deals briefly with the true meaning of "Knowledge from on high", and the means of attaining it.

ANALYSIS OF THE CONTENTS

Introduction.—The reason for writing the treatise stated. Scepticism on the part of the orthodox concerning the existence and the possibility of revealed knowledge. The author's claim that such scepticism is due only to ignorance, and his acceptance of the challenge to establish his claim.

Chapter I.—Definition of Knowledge, of the Knower, and the Known. The highest knowledge that of God Himself. Knowledge and ignorance contrasted and the superiority of knowledge demonstrated.

Chapter II.—Concerning the Soul, which is the "tablet" of knowledge. The nature of body and soul contrasted. The different "faculties" within the human personality: the animal spirit; the natural spirit. The Rational Soul as the true essence of man: belonging to the world of *amr*: possessed of an "inward eye". The relation of soul to body. The soul's search for Knowledge and pre-occupation with it.

Chapter III.—The two types of Knowledge, Religious and Intellectual. Religious subdivided into (a) the Knowledge of fundamentals, including the doctrine of the Unity, Life and Death, and eschatology. The *Mutakallimūn*: the science of *Tafsīr*, requiring a knowledge of philology and literature. (b) Knowledge derived from these fundamentals, dealing with three obligations: what is due to God, comprising the duties of worship and religious observance; what is due to men, in business transactions and contractual obligations; what is due to oneself in the development of character. Intellectual knowledge divided into three classes: (a) comprising Mathematics, Logic, and their derivatives; (b) Natural

Science and its branches ; (c) Metaphysics, including the study of the Divine and all other beings and substances.

Chapter IV.—The Knowledge of the Sūfis and its subject-matter, stated briefly.

Chapter V.—Methods of acquiring Knowledge : (i) Submission to human teaching, a well-recognized method. (ii) Submission to Divine teaching, divided into (a) from within by Reflection and the power of inference, by which the potentiality within the soul becomes actuality ; (b) from without, by the Divine revelation, limited to the Prophets, and Inspiration, the awakening of the individual soul by Universal Soul, common to the prophets and the saints. The nature and functions of Universal Mind and Universal Soul.

Chapter VI.—The differences of souls, in regard to the acquisition of Knowledge, due to the influence of infirmities while in the body. The remedies for such infirmities, and the restoration of the human soul to its original purity by its reception of the light of Universal Soul.

Chapter VII.—The true meaning of Knowledge from on high : three means of attaining it. (i) Extensive study ; (ii) Genuine self-discipline and true meditation ; (iii) Reflection, whereby the door into the Invisible World is opened to the soul of man.

AUTHOR'S INTRODUCTION

TREATISE CONCERNING KNOWLEDGE FROM ON HIGH

Praise be to God, Who hath adorned the hearts of His chosen servants with the light of Saintship, and hath nurtured their spirits with all loving kindness and, with the key of knowledge, hath opened the door of Unification (*tawhīd*), to the gnostics among the wise.¹ I pray for the blessing of God

¹ Cf. al-Hujwīrī, "Real Unification consists in asserting the unity of a thing and in having a perfect knowledge of its unity . . . I declare that Unification is a mystery revealed by God to His servants and that it cannot be expressed in language at all." *Kashf al-Mahjūb* (tr. R. A. Nicholson), pp. 278 ff. Cf. also *Rawdat al-Tālibīn*, p. 153.

upon our lord Muḥammad, the lord of the Muslims, who summoned men to the true faith and carried out its obligations, who guided the community in the right road; and upon his family, who dwell in the sanctuary of protection.

Know that one of my friends related of a certain theologian that he denied the esoteric knowledge (العلم الغيبي), upon which the elect of the Sūfīs rely, and to which the followers of the Mystic Way trace back their origin. For they declare that knowledge from on high (العلم الالهي) is greater and more reliable than the types of knowledge acquired and obtained by study. My friend declared that the aforesaid person asserted: "I am unable to conceive of the knowledge of the Sūfīs and I do not suppose that anyone in the world can speak of true knowledge (العلم الحقيقى) as the result of reflection and deliberation apart from study and acquisition." Then I said: "He does not seem to have investigated the different methods of attainment, nor to know the power of the human soul and its qualities, and its capacity for receiving impressions of the Invisible and for attaining to knowledge of the Divine World (المملوکوت).¹

¹ Cf. *Iḥyā'*, iv, p. 216 (ll. 7 ff.): "Know that there are worlds through which you must pass, the material, visible world (عالم الملك والشهادة) is the first . . . and this stage may be passed without difficulty. The second is the Divine World (عالم الملة) and it is beyond me, and when you have passed beyond me, you have arrived at its stations. It contains extensive deserts and wide expanses and lofty mountains and fathomless seas, and I know not how you will be saved therein. The third is the Celestial World (عالم الجبروت) . . . which is like a ship moving between the land and the water and it has not the constant motion of the water, nor has it the complete immobility of the land and its stability, and everyone who walks on the land walks in the world of *mulk* and *shahāda*, and when he is strong enough to sail on a ship he is like one who walks in the world of *jabarūt* and when he reaches the stage of being able to walk on the water without a ship, he walks in the world of *malakūt*, without sinking. When you are not able to walk upon the water, then depart, for you have passed beyond the land, and have left the ship behind, and there remains before you only the limpid water." Cf. also *Mishkāt al-Anwār*, pp. 122 ff., and A. J. Wensinck, *The Relation between al-Ghazālī's Cosmology and his Mysticism*.

Then my friend said : "Yes, that man declares that knowledge consists only of jurisprudence, and interpretation of the Qur'ān and scholastic theology are sufficient, and there is no knowledge beyond them: and these sciences are acquired only by submitting to instruction and by thorough knowledge." I replied : "Yes, and how is the science of interpretation to be learnt? For the Qur'ān is an ocean comprehending all things, and not all that it signifies, nor the full truth of its interpretation, are to be found in these literary works which are in general circulation, but the interpretation thereof goes beyond what that claimant knows." My friend said : "That man knows only those commentaries which are well known and spoken about, attributed to Qushayrī and Tha'lābī and Māwardī and others." I said : "He has strayed a long way from the straight road (which leads to) the truth, for Sulamī, in the *Tafsīr*,¹ made a collection of the statements of those who attained to something like certainty (i.e. the Sūfīs), and these statements are not mentioned in other commentaries. That man who reckons that knowledge consists only of jurisprudence and scholastic theology and a commentary which is well known, apparently does not know the different branches of knowledge and their distinctions and classes, and their true significance, and their outward expression, and their inward meaning. But it is not unusual for one ignorant of a thing to deny that thing and that claimant has not tasted the draught of spirituality nor attained to knowledge from on high, and how can he acknowledge that, and I am not satisfied with his acknowledgment of it, in pretending to know or guessing at what, in fact, he did not know."

Then that friend said : "I wish that you would mention some of the classes of the sciences and prove that the knowledge which you claim (i. e. inspired knowledge) is valid, and attribute it to yourself and maintain your assertion of it."

I replied : "This which you seek to have explained is exceedingly difficult, but I will show what are its antecedents,

¹ *Kitāb Ḥaqīqat al-Tafsīr*.

as far as I can, and in accordance with the time at my disposal and what occurs to my mind. I do not want to prolong the discussion, for the best discourse is that which is brief and shows the way." I have asked God for His favour and help and I have mentioned the request of my good friend, in regard to this officious proceeding on my part.

CHAPTER I

Know that Knowledge (العلم) is the presentation to itself, by the rational, tranquillized soul (النفس الناطقة)¹ (المطمئنة) of the real meaning of things and their outward forms, when divested of matter, in themselves, and their modes and their quantities and their substances and their essences, if they are simple (i.e. uncompound). And the knower is the one who comprehends and perceives and apprehends, and that which is known is the essence (ذات) of the thing, the knowledge of which is engraved upon the soul. The nobility of the knowledge is in accordance with the nobility of the thing known, and the rank of the knower corresponds to the rank of the knowledge. There is no doubt that the most excellent of things known, and the most glorious, and the highest of them, and the most honoured, is God the Maker, the Creator, the Truth, the One. For knowledge of Him, which is knowledge of the Unity, is the most excellent branch

¹ Cf. 'Abd al-Razzāq's definition of "النفس المطمئنة" "that of which the spiritual illumination has been perfected so that it has been stripped of its vices and has replaced them by virtues and it has turned its face towards the heart (i.e. the highest self), following it in ascending towards the Invisible World, having been cleansed from all defilement, being assiduous in devotion, dwelling in the highest of abodes, so that its Lord may address it face to face." For "النفس الناطقة" cf. Plotinus, *Ennead*, v, 9, 7, and *Theology of Aristotle*, pp. 6, 120 ff., and also Ghazālī, *al-Ma'rif al-'Aqliyya*, fols. 8a, 11b, and *Rasā'il Ikhwān al-Safā*, "Rational souls rejoice in knowledge and understanding. When the rational soul has awakened from the sleep of neglect, the eye of insight is opened for her and she beholds her teacher and recognizes her Maker and therewith yearns for her Creator." iii, pp. 270, 271.

of knowledge, and the most glorious and the most perfect, and this knowledge is necessary, it must be acquired by all rational beings, as the Lawgiver (upon whom be blessing) said : “ The search for knowledge is an obligation upon every Muslim.” He said also (may God bless him) : “ Seek knowledge even in China,” and he who possesses this knowledge is the most honourable of those who know. For this reason God distinguished such men by giving them the highest rank, saying : “ God bears witness that there is no God but He and (so also do) the angels and men endued with knowledge.”¹ Those who have absolute knowledge of the Unity are the prophets and after them the theologians, who are the heirs of the prophets.

But this knowledge, though it is excellent in essence and perfect in itself, does not do away with the other types of knowledge ; indeed, it is not attained except by means of many antecedents, and those antecedents cannot be ordered aright except through various sciences, such as the science of the heavenly bodies and the spheres and the science dealing with the things that God has made. From knowledge of the Unity are derived other branches of knowledge and we shall classify them in their place.

Know that knowledge is excellent in itself, without consideration of the thing known, so that even the knowledge of sorcery is excellent in itself, even though it be futile. That is because knowledge is the contrary of ignorance, and ignorance is one of the accompaniments of darkness, and darkness belongs to the sphere of immobility, and immobility is near to non-existence, and what is false and misleading is to be classed with this. For the sphere of knowledge is the sphere of what is existent, and existence is better than non-existence, for guidance and truth and activity and light are all linked up with existence. Since existence is better than non-existence, then knowledge is more excellent than ignorance, for ignorance is like blindness and darkness, and knowledge is like sight and

¹ Sūra iii, 16.

light and "the blind man shall not be held equal to him who sees, nor darkness to light."¹ God made this manifest when He said : "Shall they who have knowledge and they who have it not, be held equal?"² Then, since knowledge is better than ignorance and ignorance is one of the accompaniments of the body and knowledge is one of the attributes of the soul, the soul is more honourable than the body.

Now knowledge has many divisions, which we shall enumerate in another chapter ; and for the one who knows there are numerous paths in the search for knowledge, which we shall mention elsewhere. And now, after you have realized the excellence of knowledge, all that you need to do is to attain to understanding of the soul, which is the tablet of knowledge, and its abode and place of habitation. That is because the body is not an abode for knowledge, for bodies are limited and will not contain the many branches of knowledge ; indeed, they can receive only impressions and inscriptions, but the soul is able to receive all types of knowledge without let or hindrance or fatigue or cessation, and we will explain briefly what the soul is.

CHAPTER II

CONCERNING THE SOUL AND THE HUMAN SPIRIT

Know that God Most High created man from two different things, one of them the body, which is evil, gross, subject to generation and corruption, composite, made up of parts, earthly, whose nature cannot be complete except by means of something else,³ and that other is the soul, which is substantial (جوہری), simple,⁴ enlightened, comprehending, acting, moving, giving completion to instruments and bodies.⁵ For God Most High compounded the flesh of elements of nutriment and increased it with particles of blood,⁶ and laid down a rule

¹ Sūra xxxv, 20.

² Sūra xxxix, 12.

³ Cf. Plotinus, *Ennead*, iv, 7, 1 ; *Theology of Aristotle*, pp. 160 ff.

⁴ Cf. *Ennead*, iv, 8, 8, and *Theology of Aristotle*, p. 41.

⁵ *Ibid.*, p. 42.

⁶ The Cairo edition reads رماد.

for it and arranged its affairs and appointed its limits. Then the substance of the soul was made manifest by His command, the One, the Perfect, the Most Excellent, the Benefactor. Now by the “soul”, I do not mean the force which seeks for sustenance, nor the force which stirs up to lust and passion, nor the force which resides in the heart, producing life, which issues in sensibility and activity (proceeding) from the heart to all the members, for this force is called the animal spirit (روح حيوانية), and feeling and movement and lust and anger are among its “troops”. And that force which seeks for sustenance, which resides in the liver, for the disposal of food, is called the natural spirit (روح طبيعية), and the digestion and secretion are among its attributes ; and the power of imagination and of procreation and growing and the rest of the natural powers are all of them servants to the flesh, and the flesh is the servant of the animal spirit, because it receives its powers from it and acts in accordance with its instigation.

But by the soul I mean only that perfect, simple substance which is concerned solely with remembering and studying and reflection and discrimination and careful consideration.¹ It is receptive of all types of knowledge and does not weary of receiving images which are abstract, immaterial ; and this substance is the ruler of the spirits (i.e. those aforementioned) and the controller of the faculties, and all serve it and comply with its command. Now the rational soul, by which I mean this substance, has a special name with every group of people : the philosophers call this substance “the rational soul”, and the Qurān calls it “the soul at rest” and the “spirit which is of the *amr* of God”² and the Sūfis call it the “spirit” and sometimes the “heart”, but though the names differ the meaning is one, it does not differ. In our opinion the “heart” and the “spirit” and the “soul at rest” are all names for the rational soul, and the rational soul is the living

¹ Cf. *Theol. of Aris.*, p. 43.

² Sūra xvii, 87.

substance which lives and acts and comprehends, and when we use the term "spirit" absolutely, or the "heart", we mean by it only this substance.¹ But the Ṣūfīs call the animal spirit "soul" (i.e. the lower self = *نَفْس*) and the Shar' has declared that to be the case, and says : "The greatest of your enemies is your *nafs*." And also the Lawgiver used the term *nafs* absolutely and, indeed, strengthened it by putting it in the construct case, for he said : "Your *nafs* which is between your two sides," and he indicated by this term only the force of sensual desire and passion, for they are both aroused by the heart² which rests between the two sides.

So when you have realized the distinction between the (different) names, then know that those who have investigated the matter express this delicate substance in different ways, and they hold different views concerning it. For the scholastic theologians, who are skilled in discussion, reckon the soul to be a body and state that it is a subtle body, corresponding to this gross body, and they hold that there is no difference between the spirit and the flesh except in respect of subtlety and grossness. Then certain of them reckon the spirit as an accident, and some of the physicians incline towards this view : and certain of them consider the blood to be a spirit—and all of them were content to limit their consideration to what they were able to conceive of, and they did not go as far as the third division.

Know that the three divisions are the body and the accident and the simple substance. For the animal spirit is a subtle body, like a lamp, which has been kindled and placed in the glass-vessel of the heart, by which I mean (here) that cone-shaped object which is suspended in the breast, and the life is the light of the lamp, and the blood is its oil, and feeling and movement are its flames, and lust is its heat, and passion is its smoke : and the force seeking for sustenance (i.e.

¹ Cf. *Iḥyā'*, iv, p. 23. "By the heart I mean the inner self which belongs to the world of *amr*."

² Cf. p. 194 above.

appetite), which is situated in the liver, is its servant and guard and protector, and this spirit is found in all the animals, for it is shared by the cattle and other beasts and man, and it is a body and the impressions it receives are accidents. Now this spirit does not follow the right road to knowledge and does not know the path which the creature should take, nor what is due to the Creator. It is only a servant, a captive which dies with the death of the body. If the oil¹ is in excess, that lamp is extinguished by excess of heat, and if it is lacking (the lamp) is extinguished by excessive cold, and its extinction is the cause of the death of the body. Neither the Word of the Creator, praise be to Him, nor the duties imposed by the legislator (i.e. the Prophet) are (meant) for this spirit, for the brutes and the rest of the animal creation are without duties imposed, and not to them are the ordinances of the Canon Law addressed. Man is laid under obligations and addressed because of another meaning (i.e. attached to the term "spirit") found only in himself, which is additional and applicable especially to him. And that meaning signifies the rational soul and the spirit at rest, and this spirit is not a body nor an accident, for it (proceeded) at the command of God Most High, as He said : " Say, the spirit (proceedeth) at the command of my Lord,"² and He said also : " O soul at rest, return unto thy Lord, satisfied with Him, giving satisfaction unto Him."³

Now the command⁴ of the Creator Most High is not a body nor an accident, but a Divine force like Universal Mind (العقل الاول)⁵ and the Tablet and the Pen,⁶ and they

¹ The Cairo text reads " blood ".

² Sūra xvii, 87.

³ Sūra lxxxix, 27-30.

⁴ On the word of *amr* cf. *Iḥyā*, iv, p. 23.

⁵ Cf. *Theol. of Aristotle*, p. 39, and Plotinus, " The Intellectual-Principle . . . the offspring of God. . . . For here is contained all that is immortal; nothing here but is Divine Mind ; all is God." *Ennead*, v, 1, 4 ff.

⁶ " The Pen is that which God created to enable the hearts of men to be inscribed with knowledge." *Iḥyā*, iii, p. 14. Identified with Universal Mind in *al-Ma‘arif al-‘Aqliyya*, fol. 21b.

are simple substances, free from materiality; indeed, they are incorporeal splendours, intellectual, without sensibility. Now the spirit and the heart, in our use of the term, is derived from those substances,¹ and is not susceptible of corruption and does not disappear nor pass into nothingness nor die, but is separated from the body and expects to return to it on the Day of Resurrection: and that was declared to be the case in the Shar' and was authenticated in those sciences which are established by categorical proofs. So it is plainly proved that the rational spirit is not a body nor an accident; indeed, it is an abiding, eternal substance, and incorruptible. So we have no need to recapitulate the proofs and add to the evidence, because they are well established and have been recorded. Let him who wishes to verify them consult the books suitable for that purpose.

But our method is not to bring forward proofs, but to rely upon clairvoyance, and we depend upon the vision of faith and the fact that God related the spirit sometimes to Himself and sometimes to His command and sometimes to His glory for He said: "I breathed into him of My Spirit,"² and He said also: "Say, the Spirit (proceedeth) at the command of my Lord." Also He said: "And We breathed into him of Our Spirit." Now God Most High is too glorious to attach unto Himself a body or an accident, because of their lowness and their liability to change and their swift dissolution and corruption. But the Lawgiver (God's blessing upon him) said: "The spirits are like troops assembled," and he said: "The spirits of the martyrs are in the crops of green birds." Now the accident does not subsist after the substance has passed away, because it does not subsist in itself. For the body is subject to dissolution as it was subject to being compounded of matter and form, which is set forth in the books. And from these verses and traditions and intellectual proofs,

¹ Cf. Plotinus, "Sprung from the Intellectual-Principle, Soul is intellective . . . its substantial existence comes from the Intellectual-Principle," *Ennead*, v, 1, 3.

² Sūra xv, 29; Sūra xxxviii, 72.

we have come to know that the spirit is a simple substance, perfect, having life in itself, and from it is derived what makes the body¹ sound or what corrupts it. For the natural and the animal spirits and all the bodily powers are all among its troops. We have learnt, too, that this substance receives the images of things known² and (understands) the real meaning of existent things, without being concerned with their actual selves or corporeal forms, for the rational soul is capable of knowing the real meaning of humanity without seeing a human being, as it is acquainted with the angels and demons, but has no need to see their forms, since the senses of most human beings do not attain to them.

Moreover, certain of the Sūfis maintain that the heart possesses an organ of sight like the body, and outward things are seen with the outward eye, and inward realities with the eye of the mind. For the Apostle of God (may God bless him) said : "Every servant has two eyes in his heart," and they are eyes by which he perceives the Invisible, and when God wishes well to one of His servants He opens the eyes of his heart so that he may see what is hidden from his outward sight.³ Now this spirit does not die with the death of the body, for God Most Holy summons it to His door and says : "Return unto thy Lord" : it is only separated from, and discards, the body, and because of its separation from the body, the bodily and the natural powers cease to function and their activity is stilled, and that stillness is called Death.

Those who follow the Way, I mean the Sūfis, depend upon the spirit and the heart, more than they depend upon the corporeal form. Now since the spirit (proceeded) from the

¹ For "body" the Cairo edition reads "religion" (دين).

² Cf. Plotinus, v, 3, 3.

³ Cf. *Iḥyā*, iii, p. 15. "The inward eye is the eye of the soul, which is subtle, perceptive, and it is like the rider and the body like the horse, and the blindness of the rider is more harmful to him than the blindness of the horse." Cf. also iv, p. 430. "The Invisible Divine World is not seen with the outward eye, but only with another eye, which was created in the heart of every man, but man has veiled it by his lusts and worldly pre-occupations and he has ceased to see with it." Cf. also *Rawdat al-Tālibīn*, p. 164.

command of the Most High Creator, it is like a stranger in the body and it will look towards its Source¹ and unto Him it will return. Therefore it will obtain more benefit from its Source than it will from the bodily form, when it is strong and is not defiled by the defilements of human nature. When you have come to know that the spirit is a simple substance, and you have learnt that the flesh must have a habitation and is an accident, for it subsists only through the substance, then know that this substance does not abide in any place, nor dwell in a habitation,² and the body is not the habitation of the spirit, nor the abode of the heart, but the body is the instrument of the spirit and the implement of the heart and the vehicle of the soul. The spirit is not attached to the particles of the body, nor detached from it, but it concerns itself with the body, is beneficial to it and generous towards it.³

Now the first manifestation of its light is on the brain, because the brain is its special place of manifestation : it takes a guard for itself from its forefront, and from the midst of it a prime minister and controller, and from the back part of it a treasury and a treasurer and a guardian, and from all parts of it infantry and cavalry. From the animal spirit (it takes for itself) a servant, and from the natural spirit a sergeant, and from the body it takes a vehicle, and from this world a sphere of action. From life it obtains goods and wealth, and from activity merchandise, and from knowledge profit. The next world provides it with a destination and place of return and the Canon Law with a way and a road. The headstrong soul (النفس الامارة) gives it a guard and a leader, and the reproachful soul (النفس اللوامة) an admonisher.⁴ The senses are its spies and allies, and from religion it takes a coat of mail, while the reason serves it as instructor, and the

¹ Cf. Plotinus, vi, 8. "The soul's movement will be about its Source."

² Cf. *Theology of Aristotle*, pp. 30, 41.

³ Cf. Plotinus, v, 1, 10, "that phase of the soul . . . having to do with the body, creating, moulding, spending its care upon it."

⁴ Cf. Sūras lxxv, 2; xii, 53.

sensibility as pupil, and the Lord, glory be to Him, is behind all these, on the watch.¹

The soul then, being such as this, with this equipment, does not advance towards this gross body and is not essentially attached to it, but brings it benefit, while itself facing towards its Creator, and its Creator commands it to obtain profit, to the appointed end. So then the spirit, during this journey (i.e. through this life), is concerned only with the search for knowledge, because knowledge will be its adornment in the world to come, for "wealth and children are the ornament of life in this world".² As the eye is concerned with the sight of visible things and the hearing is assiduous in listening to sounds, and the tongue is alert to form words, and as the animal spirit seeks the delights of passion, and the natural spirit loves the pleasures of eating and drinking, (so also) the spirit at rest, by which I mean the heart, seeks only knowledge and is not satisfied except with it, and it learns throughout its life, and takes pleasure in knowledge all its days, until the time of its separation, and if it welcomes anything other than knowledge, it is concerned with it only in the interests of the body, not out of desire for the body itself and love of its origin. Then, when you have come to know the states of the spirit and have realized that it is immortal, and understand its love for knowledge and passionate desire for it, you ought to consider the different types of knowledge, for they are many, and we will enumerate them briefly.

The Instructions of the East India Company to Lord Macartney on His Embassy to China and His Reports to the Company, 1792-4.

Part I: Instructions from the Company.

Edited, and with an Introduction, by
EARL H. PRITCHARD

FROM 1600 until 1833 the East India Company held a monopoly of all British trade with China. Private individuals, licensed by the Company to reside and trade in India, were permitted to carry on the so-called "Country" trade between India and China, and the commanders and officers of the Company's ships were permitted to carry on "Private" trade in minor articles and to a limited extent in tea and raw silk directly between England and China. With these exceptions British trade was a closed monopoly, but despite this favourable situation the Company found much to complain of because the Chinese had their own ideas of monopoly and of how foreign trade should be carried on.

In China all foreign trade, from 1757 onward by law, and for half a century before that by custom, was confined to Canton, and at Canton it was subject to such restrictions, regulations, and impositions that its existence was precarious and the life of the trader who resided there was always unpleasant and sometimes in danger. During the trading season, from early autumn until late spring, foreign traders were closely confined to the factories outside the walled city of Canton provided by Chinese merchants. Women were not permitted to come to the factories, and the traders were given little chance for exercise or recreation. During the summer, when ships were not at Canton, the traders were forced to reside at Macao, a Portuguese settlement near Canton, and the cost of this annual migration was subject to constantly

increasing charges. Foreign trade was confined to the Co-hong, a loose association of a dozen Hong merchants who were responsible to the Hoppo (Imperial Customs Officer) and provincial officials for the payment of duties and the good behaviour of the foreigners. Because of this system the Europeans were never sure of what duties they were paying, while the Chinese merchants recompensed themselves for the extortions of the officials by concealed levies upon the foreign trade. Finally the Chinese, applying their doctrine of mutual responsibility, tried to hold the chief of a national group at Canton responsible for the acts of all members of his nationality and insisted that in homicide cases the guilty foreigner should be surrendered to a Chinese magistrate for trial, a proceeding equivalent to conviction.

As the direct result of a particularly forceful application of this last principle in the *Lady Hughes* affair of 1784, which led to the execution of a British gunner who had accidentally killed two minor mandarins while firing a salute, and in an endeavour to abolish the above described system of trade and to put British relations with China upon a treaty basis, the Company and Government resolved in 1787 to send an Embassy to China. Another object of the mission was to obtain commercial privileges which would extend British trade to North Chinese ports, thus helping the Company to beat down the competition of its Continental rivals and make London the European distributing centre for Chinese goods. This first Embassy, under the direction of Lieut.-Colonel Charles Cathcart, M.P., failed because of the Ambassador's death on the way to China.

The idea was revived in 1791 as the favourite project of Henry Dundas, chief member of the Board of Control and Secretary of State for Home Affairs. Although the Company was no longer especially favourable to the idea since it was already monopolizing the China trade, as a result of the Commutation Act of 1784 reducing the duties on tea, added emphasis was given to the project by the demands of the rising

northern industrialists that the Government should find markets for their products. As a result the most elaborate commercial mission ever yet sent to the East was prepared to be conducted by George Viscount Macartney, former Ambassador to Russia and Governor of Madras. A more competent person could not have been chosen, and no expense was spared in the preparations. Lord Macartney carried with him, besides letters to the Emperor of China, credentials to the rulers of Japan, Cochin China, and all other Princes and Potentates of the East. After his negotiations at Peking for enlarged commercial privileges and the opening of new ports, he was to proceed to these other countries in an endeavour to open the whole East to British trade. He carried with him specimens of all types of British manufactures which were to be distributed in the various countries in an effort to establish a taste for British goods. Sir George Leonard Staunton, Secretary to the Embassy, carried credentials to continue the mission in case of the Ambassador's absence, disability, or death.

The Embassy sailed from Portsmouth on 26th September, 1792. Although it was officially a government mission and the Ambassador carried instructions from Henry Dundas, the cost of the Embassy was paid by the Company, and the Ambassador consequently received detailed instructions (Document No. 1 below) from the Chairman and Deputy Chairman of the Court of Directors of the East India Company. The Embassy was carried on H.M.S. *Lion*, the presents were carried on the Indiaman *Hindostan*, and the ships were attended by the brig *Jackall* and later the *Duke of Clarence* and the *Endeavour* as tenders. After stopping outside of Canton, where its coming had been announced by a letter from the Chairman to the Viceroy (Document No. 2), the Embassy proceeded to the neighbourhood of Tientsin, where it disembarked and was transported by boat and carriage to Peking. From thence the Ambassador and part of his suite proceeded to Jehol where he was received by the Emperor

on 14th September, 1793, and took part in the ceremonies attending the Emperor's birthday on 17th September. At Jehol and after returning to Peking the Ambassador attempted to carry on negotiations but was rebuffed at every turn. His requests were refused and he was dismissed from Peking on 7th October.

The Embassy was conducted by Sung Yün,¹ a member of the Council of State, from Peking to near Hangchow, where part of the mission rejoined the *Hindostan*, which had gone to Chusan from Tientsin, the *Lion* having already returned to Canton. The Ambassador and the remainder of the mission were conducted overland through Chekiang, Kiangsi, and Kuangtung provinces to Canton by Ch'ang Lin,² newly appointed Viceroy at Canton. During the course of this journey and after his return to Canton Lord Macartney received many favourable assurances from Sung and Ch'ang which led him to believe that a continued correspondence might be kept up with Peking and that abuses at Canton would be remedied. During the course of the journey and while at Canton he took every available opportunity to collect information about the products and manufactures of China which might be useful to England or to the Company in India.

While at Canton the Ambassador dispatched two letters (Documents 3 and 4) to the Company, giving an account of his mission and a report on his findings, and one letter (Document No. 6) to Sir John Shore, Governor-General of Bengal, giving some account of the mission and a report on the economic plants he was sending to India. Because of the War with France the Ambassador gave up his plans for going to Japan and other places in the East, and decided to have the *Lion* convoy the fleet of Indiamen home. The fleet sailed from Macao on 17th March, 1794, and reached

¹ Sung Yün 松 篤 (1753-1835).

² Ch'ang Lin 長 麟 (D. 1811).

Portsmouth on 4th September of the same year, from which place Macartney directed a further report to the Company (Document No. 5). As some questions arose about the desirability of sending certain products to China recommended by Lord Macartney, he had occasion to direct a further letter to the Company in November, 1794 (Document No. 7). An account of the cost of the mission has been appended in Document No. 8.

The documents to follow, besides being of general historical importance inasmuch as they indicate what the Company wished the Ambassador to do and give an official account of his mission in China, are of great interest in throwing light upon early efforts of the Company to introduce tea culture into India, to improve silk culture in India, and to find out about other Chinese economic plants and manufacturing processes. They only indirectly shed light upon the first efforts of England's northern industrial towns to break into the China trade. Document No. 1, containing the instructions of the Company to Lord Macartney, is particularly valuable. So far as the writer is aware no copy of it is now known to exist in England. It is not preserved in the India Office, the Public Record Office, or the British Museum, and only imperfect copies are to be found in the Cornell Manuscripts, *Macartney Correspondence*, ii, No. 27 and v, No. 224. The version here reproduced is the original delivered to Lord Macartney, which the writer was fortunate enough to procure from a British bookseller in the fall of 1931 along with twenty-three other enclosures with the letter. This collection is now the property of the State College of Washington at Pullman, Washington. The other documents, while of equal interest, are not so rare and are to be found sometimes in duplicate and triplicate among the *China : Factory Records* (vols. xx, xcii, xciii) in the India Office, while Documents Nos. 2 and 7 are to be found at Cornell.

The two best manuscript collections for the study of the East India Company's relations with China are to be found

in the India Office in London where some 364 volumes relating to the China factory are preserved, and in the Wason Collection on China in Cornell University Library, Ithaca, New York, where forty-four volumes, principally transcripts from the Company's records prepared for Lord Macartney's use and papers of his relating to the China Embassy, are preserved. For more complete accounts of the Embassy and for further information on details mentioned in the documents to follow than is given in this introduction and the notes, the reader is referred to *Macartney's Journal*, to be found in John Barrow's *Account of the Public Life . . . of the Earl of Macartney* (London, 1807), ii, and in Helen M. Robbin's *Our First Ambassador to China* (London, 1908); to H. B. Morse, *Chronicles of the East India Company Trading to China* (Oxford, 1926-9), especially volume ii; to Sir George Leonard Staunton, *An Authentic Account of an Embassy from the King of Great Britain to the Emperor of China* (London, 1797), and to the writer's recent study *The Crucial Years of Early Anglo-Chinese Relations, 1750-1800* (Pullman, Washington: Research Studies of the State College of Washington, 1936).

STATE COLLEGE OF WASHINGTON,
PULLMAN, WASHINGTON.

[Document No. 1]

THE EAST INDIA COMPANY'S INSTRUCTIONS TO LORD
MACARTNEY,¹ 8TH SEPTEMBER, 1792

The Right Honble Lord Viscount Macartney
K.B. His Britannick Majesty's
Ambassador Extraordinary and Plenipotentiary
to the Emperor of China etc. etc. etc.

My Lord,

The Right Honorable Henry Dundas, one of His Majesty's principal Secretaries of State having been pleased to communicate to us a Draft of the intended Instructions for your

¹ MSS. State College of Washington, *Pritchard Collection of Macartney Documents on China*, i, No. 1.

Excellency on the Embassy to China,¹ we beg leave to state to your Excellency what occurs to us on behalf of the East India Company, whose interest is so deeply involved in your Excellency's success, and who will consequently support the expense of the Embassy.

We shall avoid as much as possible touching upon those points which are the objects of instruction from His Majesty's Ministers; and We refer your Excellency to a Copy of the Instructions to the late Colonel Cathcart [No. 24 in the Packet],² for an enumeration of those grievances under which the Company's Factory at Canton have hitherto laboured. We enclose moreover for your Excellency's information Copy of a Letter [No. 25]³ from the Court of Directors to Messrs. [Henry] Browne, [Eyles] Irwin and [William] Jackson, appointed to form a Secret and Superintending Committee of Supra Cargos for the Company's affairs in China, and who sailed from England in the *Thetis*⁴; of another Letter to those gentlemen from ourselves [the Chairman and the Deputy Chairman of the East India Company], acquainting them with the intention to send an Embassy [No. 26]⁵; also of one

¹ Published in H. B. Morse, *Chronicles of the East India Company Trading to China* (Oxford, 1926-9), ii, 232-242. Dated 8th September, 1792.

² MSS. State College of Washington, *Pritchard Collection*, i, No. 24. Colonel Charles Cathcart was sent to China as Ambassador in 1787 but died on the outward voyage. The instructions are dated 30th November, 1787, and are signed by Lord Sydney. The unsigned instructions are printed in Morse, *Chronicles*, ii, 160-7, and an earlier draft signed by Henry Dundas, who actually wrote them, is printed in Saxe Bannister, *Journal of the First French Embassy to China, 1698-1700* (London, 1859), pp. 209-226.

³ The three above-mentioned men were sent to China in the spring of 1792 to reform the management of the Canton factory and to co-operate with the Macartney Embassy. The letter in question outlines principles to be followed in the reform, and directs them to obtain as much information about the growth and manufacture of silk as possible and transmit it to India. The letter is in MSS. Cornell University, *Macartney Documents*, xii, 11th April, 1792.

⁴ *Thetis*, Indiaman of 804 tons, sailed for China on 5th May, 1792.

⁵ MSS. State College of Washington, *Pritchard Collection*, i, No. 26. This letter is dated 25th April, 1792, and is marked "Secret". After pointing out that an Embassy is to be sent it directs the Secret and Superintending Committee to procure an audience with the Viceroy as soon as possible, to announce to him the coming of the Embassy, and to deliver

from the Chairman addressed to the Viceroy of Canton [No. 28],¹ announcing the Embassy in form, for the information of the Emperor.

to him for transmission to the Emperor a letter from the Chairman announcing the Embassy. It then goes on to indicate the aims of the mission, cautions the supercargoes against antagonizing the Chinese or complaining against abuses in such a way as to endanger the success of the Embassy, and directs them to co-operate in every way with the Ambassador and to supply him with information about the trade of all nations at Canton. The following extracts from the letter are worth quoting :—

“ But although the avowed and ostensible purpose of the Embassy is complement and conciliation, we hope that means may be found to procure substantial privileges and advantages for the Company. . . .

“ We are very much inclined to think that however desirous we may be to remove every complaint, yet remonstrance against trifling abuses may not be worthy our notice on the present occasion ; and that attempts to correct them may prove the means of frustrating the endeavours of the Ambassador to procure more solid and substantial advantages. . . .

“ It will be a most important point to secure a favorable and gracious reception of the Embassy, on the part of the Emperor ; in order to impress the minds of the Natives and of the Mandarins particularly with an opinion that our representations will be well received at Court. This Idea will check their disposition to impose, and probably produce more permanent advantages than any positive orders on the part of the Emperor the execution of which might be evaded.

“ If the result of the Embassy shall tend to conciliate the Chinese Government, the Mandarins, and the Natives in general towards the Company, and we can procure a proper Establishment to the Northward, we shall be near to the Districts where the Tea is produced, and, as we apprehend, not far from those parts where our Manufactures and particularly Woollens, are consumed. . . .

“ In the latter Case a competition between two Ports would gradually remove those abuses and impositions on our Trade which we conceive exist, in consequence of the establishment of the Co Hong at Canton, and thereby relieve the Ambassador from the task of making any direct remonstrance against the Co Hong. . . .

“ If the Ambassador shall succeed in obtaining an Establishment for the Company to the Northward, you must select two of our Servants well acquainted with the Company’s Trade, and with the Customs and Manners of the Chinese, together with two or three of the Younger Servants, who must proceed to the Port or Place, under such orders and regulations as you may think necessary on the occasion, and which must of course depend altogether upon local considerations and circumstances.”

The letter is signed by Francis Baring and J. Smith Burges. The first draft was made by Lord Macartney on 17th March, 1792 (MSS. India Office, *China : Macartney Embassy*, xci, 167-8), but the final draft is much longer.

¹ See Document No. 2, which will appear in a later number of this *Journal*.

We have also enclosed Copies of Reports made by the Court of Directors relative to the Export Trade of the East India Company [No. 11, 12, and 13 in the Book Packet],¹ to the Lords of the Committee of Privy Council for the affairs of Trade, in consequence of a requisition for that purpose from their Lordships, in which whatever relates to the Company's Export Trade to China and their future prospects both for China and Japan are fully stated.

Although the documents to which we refer, contain ample, and even voluminous details of the Company's affairs in China, their past and present situation, and future prospects ; yet We find occasion to make further additions, in consequence either of new lights being thrown on the subject ; or that your Excellency proceeding to the Metropolis, instead of an Outport at the extremity of the Empire, We are enabled to enlarge our views, in the hope of acquiring more extensive and useful information, as well as substantial advantage.

But although we shall endeavor to compress our ideas, and avoid repetition as much as possible, We must desire that your Excellency will understand the documents to which we refer, as containing the sense of the Court of Directors relative to their affairs in China, from which we have no intention to deviate ; notwithstanding we do not repeat nor enter into a detail upon most points, in order to avoid unnecessary trouble to your Excellency.

We are decidedly of opinion, that our situation in China has

¹ The Reports referred to are three in number and were made by a Select Committee of the Court of Directors in September, 1791, and January, 1792, to the Lords of Trade. The first Report deals with India, the second with China, and the third with Japan and Persia. They are to be found in Parliamentary Papers, *Accounts and Papers, 1792-3*, xxxviii, No. 774b, 1-3. The Book Packet referred to consisted of twenty-one volumes of material, mainly extracts from the records of the Company's Canton factory. This whole collection is at present in the Wason Collection on China at Cornell University Library, Ithaca, New York. Outside of the India Office, it is probably the best available collection for the study of early Anglo-Chinese relations. The Reports form volumes 17-19 of the Collection as now arranged.

been greatly meliorated in every respect, since the immense increase of our Trade,¹ and that it is daily improving. We cannot quote a more convincing proof than the increased demand for British woollens. The imports into China a very few years past, bore a slender proportion to the value of the Exports from that Country by Europeans in general, and the Company in particular: whereas at present the disproportion is by no means considerable, and lessening every year. It is therefore evident that the Chinese are disposed to facilitate our views as much as possible, by promoting the favourite object of the Company, and which we are satisfied is at this moment in a progressive state of improvement.

We are therefore of opinion that the first and most important object is, neither to impair nor injure our present situation, thereby checking those prospects which are decidedly in view.—The grievances stated in the Instructions to Colonel Cathcart are no doubt real; most probably unauthorized: and from the known character of the Emperor for wisdom, justice and equity, the most peremptory orders may be expected, for the redress we are desirous to obtain. But when we consider the amount of what we suffer under most or all of them, and moreover that a representation on the subject is in fact a Charge (perhaps criminal under the Chinese Government) against persons who may be either highly useful or highly prejudicial to the Company on more important occasions, We entertain doubts as to the wisdom or prudence of entering into such details. At this moment the commerce

¹ Reference is here made to the effect of the Commutation Act of 1784 (24 Geo. III, Cap. 38) which reduced the duties on tea imported into England from an average of 119 per cent to a uniform 12½ per cent. The Act put a stop to the smuggling of tea into England, ruined the Company's Continental rivals who were thriving on the smuggling trade, and greatly increased the Company's imports and exports at Canton. The Company's exports of tea from Canton increased from T. 1,480,014 in 1784–5, to T. 4,103,828, in 1790–1, and the value of woollens sold in China increased from T. 614,955 in 1784–5 to T. 1,192,263 in 1790–1 (Earl H. Pritchard, *Crucial Years of Early Anglo-Chinese Relations, 1750–1800* [Pullman, Wash., 1936], pp. 146–150, 191–4, 391, 395).

of the Company suffers severely in consequence of a supposed redress of grievances,¹ although the Edict of the Emperor on the subject alluded to breathes the true spirit of justice, and has been executed in a literal sense.

In suggesting these doubts to your Excellency we mean no more than to request you will be pleased to exercise your own discretion and judgment on the subject, after the best information has been obtained on the spot. Numerous and important changes may happen in the Chinese Government previous to your Excellency's arrival²; favorable opportunities may offer, or circumstances happen which we cannot foresee, and of which we are persuaded that your Excellency will avail yourself with zeal and caution, for the benefit of the Company. It is necessary only for us to guard against suffering in a greater degree by an attempt to remove grievances which although heavy are more than compensated by the whole scope of the Company's present Trade with China.

We apprehend that it will be a most desirable circumstance to impress the minds of the Chinese with a favorable opinion of the Embassy, this Country and its commerce, which must produce the happiest effects at Canton or wherever else we may obtain a settlement.

Such an impression may facilitate a most important object, that of obtaining permission to trade at any Port or Ports to the North of Canton.³

¹ The reference is to the Imperial decree of 1780 which settled the debts of certain bankrupt Hong merchants to private British traders and re-established the Co-hong. The Company always insisted that this action led to an increase in prices at Canton, but a study of the Canton prices during the period leads one to think the Company over-emphasized the matter (Pritchard, *op. cit.*, pp. 165-6, 210-11); see note 1, next page.

² The possible death of the Ch'ien Lung Emperor and the accession of a new Emperor is here anticipated.

³ Lord Macartney ultimately requested the opening of Chusan, Ningpo, and Tientsin; permission to establish a warehouse at Peking, and permission to occupy for trading purposes small, detached, and unfortified islands in the neighbourhood of Chusan and Canton. All of the requests were refused (MSS. India Office, *China : Macartney Embassy*, xcii, 259-261; Pritchard, *op. cit.*, pp. 348-9).

In pursuing that object and settling the terms upon which permission shall be granted, an opportunity may offer of attempting to abolish the monopoly of the Cohong,¹ which exists at present at Canton.

These points gained, would in our opinion prove more beneficial to the Company than a redress of those grievances under which we labour at present; and if they can be obtained are more likely to prove permanent. At the same time it will be necessary to have those grievances in view, if a favorable opportunity should offer, and of which your Excellency can avail yourself, with confidence that the attempt will not be productive of consequences more injurious to the Company's interests.

In addition to the objects above mentioned, We apprehend that the best information which can be procured of the Trade, Manufactures and Commerce of the Chinese Empire, and of the Islands adjacent thereto, will comprise very nearly the whole of the Company's views or expectations, to result from the present Embassy; trusting that your Excellency will exert your known zeal and ability, for the purpose of extending their Import and Export Trade, either by means of the old, or any new channels which may be permitted or discovered, to afford protection to the property and the servants of the Company on every occasion; and particularly, that the utmost caution be used, not to impair or injure our present situation, and those prospects which are opening before us, and to which We have already alluded.

With regard to the first point, namely, that of impressing the minds of the Chinese with a favorable opinion of the Embassy &c: We trust entirely to your Excellency's ability and tried zeal for the true interests of the Company. The other points will require further explanation. In particular We

¹ A loosely organized association of Hong merchants (merchants licensed to trade with foreigners) which monopolized foreign trade. It was first established in 1720 but was almost immediately abolished. It was re-established in 1760, abolished again in 1771, and re-established in its final form in 1780 (Pritchard, op. cit., pp. 116, 131, 140, 200, 210).

think it incumbent on us to point out some risque and inconvenience which may arise from acquiring the objects in contemplation.

Our motives for desiring a Port or Ports to the Northward of Canton, are the expectation of extending our Commerce generally, and of purchasing some articles, particularly Tea, at half the price or very little more than what We now pay at Canton. On the other hand We cannot avoid reflecting upon the risque of extending our Establishments and thereby approaching much nearer to the Capital and the cognisance of the Chinese Government.

We apprehend that when Europeans first appeared on the Coasts of China, they were permitted a free Trade in all the Ports. But their dissolute and riotous conduct was so offensive to the Chinese that all European Trade was confined to Canton, at that time very little better than a nest of Pirates. And notwithstanding the fact was generally known, it does not appear that any endeavours have been used, by a contrary conduct, to induce the Chinese to entertain a more favorable opinion of Europeans. The British Seamen at Canton are at this moment as dissolute and riotous as ever; and the superior Mandarins forming their judgment in consequence of what they see and hear, consider this Country as almost barbarous.—Other Nations have receptacles for their Seamen at Danes Islands, French Island or Macao: and it would be desirable if something similar could be obtained for the British Seamen as near as possible to Whampoa¹; but at all events where they can be under the eye and controul of their Officers. The Chinese would immediately check this disposition at the request of the Company's Servants; but such interference is to be dreaded, as the slightest irregularity would prove the

¹ Whampoa, Huang-pu, was the anchorage outside of Canton. Danes and French Islands were near the anchorage. As a result of an affray between English and French seamen in 1754, in which an Englishman was killed, the French seamen were confined to French Island for purposes of exercise, and the English were confined to Danes Island (Pritchard, op. cit., pp. 124-5; Morse, *Chronicles*, v, 14-19).

occasion of impositions and embarrassment to the Company's Commerce, for which reason the disorders to which we allude have been submitted to, although with great reluctance.

Your Excellency will perceive by the proceedings relative to the Gunner, a few years past, the alarming situation of our Trade &c: in consequence of a mere accident. If faith is due to the Letters from the French Missionaries [Vol. XIV, page 528],¹ that accident was not known to the Emperor, or to his Ministers at Pekin: and if such a circumstance had been known they paint in forcible terms the possible, perhaps the probable consequences that would have ensued.

Supposing therefore that we shall succeed to obtain an Establishment amongst other places at Tiensing, and that such an accident should afterwards happen in that Port, its contiguity to the Capital would render it impossible to conceal the transaction from the Emperor or his Ministers; and the general interdiction of European Commerce might prove the consequence.

We trust that your Excellency will not think the caution we are desirous to inculcate upon every occasion, arises from timidity. Independent of the general scope of the Company's Trade, and to the favorable prospect of its improvement, the value of British property at the mercy of the Chinese in every season, very much exceeds two millions Sterling. We are desirous however of using every reasonable endeavour to obtain one or more Establishments to the Northward, concluding that in the arrangements necessary for forming and supporting such Establishments, every precaution will be taken to guard against the inconvenience and danger we have mentioned, or against any other which may occur to your Excellency.

Captain [William] Mackintosh who commands the

¹ The incident referred to was the *Lady Hughes* affair of 1784 which resulted in the execution of a British gunner who had accidentally killed two minor mandarins while firing a salute (Pritchard, op. cit., pp. 226-230). The letter referred to, by Père J. J. M. Amiot, dated Peking, 25th January, 1787, is in *Mémoires concernant . . . des chinois*, xiv, 528-530.

Hindostan¹ is very conversant with what relates to the Company's Ships and Seamen. He can also inform your Excellency of the inconvenience which the Company's Servants labour under, in having no better place than Macao to retire to in the intervals of business.

This circumstance will of course attract your Excellency's attention ; and the removal of the inconvenience we suffer will we hope be one of the happy results of your Embassy.

Doubts have been entertained by some of the Company's Servants, whether the Cohong at Canton is really prejudicial or otherwise. Although it professes to establish a monopoly in the hands of a few, yet it is a known fact that we are free to buy or sell with any Chinese, not a member of the Cohong ; in whose name however the transaction must pass.

Under the present regulations a Hong Merchant must be security for each Ship,² under a pretence that the Emperor's Duties would otherwise be in danger. The Factory could easily remove all possibility of risque, by paying such Duties in advance, but that will not satisfy the Chinese. We therefore consider the regulations as calculated to place the whole of the trade of each Ship under one person, in order thereby to cover more effectually the frauds and exactions of the Mandarins and petty Officers, which it is probable are estimated pro rata, from the uniformity we discover in most of their proceedings.

It therefore merits very serious consideration, whether in abolishing the Cohong, the abuses of which we complain at present, will be annihilated. For if they only change their form We fear it will prove to our detriment. If frauds and exactions must exist, it is less intolerable that they should be collected pro rata than ad libitum. The former is intelligible and subject to calculation, but it is probable we should fly from the latter without venturing to make the experiment.

¹ An Indiaman of 1,248 tons, which accompanied the Embassy and carried presents.

² The security merchant system developed between 1728 and 1740 (Pritchard, op. cit., pp. 116-17).

At the same time We freely confess to your Excellency, that the Company derive two very important advantages from the Cohong ; the first is, compleat security. Not only have We been exempted from bad debts, but the large Treasure which sometimes remains at the close of a Season, is perfectly secure.¹

The second, is the superior advantage which a Cohong affords, of promoting the favourite object of Barter²; and particularly of experiment. When we have occasion to speak of Irish Manufacturers, we shall quote the extract of a Letter from Canton, which will explain this circumstance in part, and evince the facility We enjoy of introducing any new article of manufacture as an experiment. The readiness and confidence with which the Hong Merchants will receive British manufactures and products, to an immense amount, never can be compensated by individuals carrying on a free Trade. And we believe their exertions to encrease the vent will prove far more successful than any other expedient that can be devised.

Under these circumstances, We think it is of the highest importance to consider in what manner, and form the Cohong shall be abolished, if it can be accomplished ; and what mode of proceeding or arrangement shall be substituted in its place. In particular, a Tarif, specifying the Duties on each article very correctly, becomes absolutely necessary. For unless the consequences can be foreseen and ascertained, We are inclined to think the old system should remain ; as the Company have never yet received benefit from any change or alteration in the mode of proceeding in China.

¹ The members of the Co-hong were jointly responsible for the debts of individual members of the association, and at the end of each trading season the silver remaining in the Company's Canton treasury was left in the care of the Co-hong.

² In reality the Company's trade was barter, even though prices were regularly fixed for all articles bought and sold, because the quantity and price of woollens taken by the Hong merchants was proportional to the quantity and price of tea purchased by the Company.

For the purpose of enabling your Excellency to form a judgment of the information which will be most useful to the Company, for the purpose of improving and extending their Trade to and from China, some general observations will become necessary, and which will be dispersed through the remaining part of this Letter.

The articles usually imported from thence, or best known to the Company are

Tea.

Silk.

Cotton Manufactures.

Silk Manufactures, on which We shall have very little to say.

Earthen Ware, which is eclipsed in a superior manner, by those in England, except with regard to the Paste.¹

Of these, the first is the most important and considerable. The quantity and value is now become so large, that it would be extremely desireable if the article could be produced within the Territories of the Company in India; a circumstance which we recommend in the strongest manner to your Excellency's attention.² At the same time We conceive that it is of still more importance to obtain the most compleat information as to the mode which the Chinese practise for the culture of Silk and the manufacture of Piece Goods; as those articles are already established to an immense extent in the Indian Territories, and their improvement is consequently of more decided and permanent advantage than introducing a new article, which although desirable in itself,

¹ The export of chinaware from China by the Company was stopped in 1791 (MSS. Cornell, *Macartney Documents*, xii, Court to Select Committee, 4th August, 1791).

² The Company gave to Lord Macartney a memoir on the cultivation of economic plants in India which had been prepared by Sir Joseph Banks, President of the Royal Society, in 1788. It gave special prominence to tea, and pointed out the areas in India which were suitable to its cultivation (MSS. Cornell, *Macartney Correspondence*, No. 177). Consider also Document No. 3, which will appear in a later number of this *Journal*.

must, if successful, occupy a part of that capital and labour, which is already usefully employed.

We apprehend China to be the first Country in which Silk is known to have been produced : and it still maintains its superiority in respect of quality. And although India is much nearer to the original source, yet the Italian Silk is preferable in quality to that of India. It is therefore highly important to obtain the best information ; as the slightest improvement in that of Bengal would be productive of beneficial consequences. We have therefore enclosed various Questions [No. 8 in the Packet],¹ and entered into a full detail, on those points, to which We request your Excellency's attention.

We have also annexed a Memorandum [No. 8], concerning the quality and colour of Nankeen Cloths, as the consumption is very great, and every attempt to imitate the colour either in India or in Europe, has failed. It will be desireable moreover, to obtain as much information as possible respecting the nature and extent of the manufacture of Cotton Piece Goods in China. We are not only excited to that enquiry in consequence of the very large exports of Cotton from Bombay ; but we think it probable that a larger quantity of goods is manufactured than is consumed in China ; a circumstance extremely interesting for our Manufacturers in Bengal, and on the Coast of Coromandel.

It must be well known to your Excellency, that when the Mogul [Mongol ?] Empire was in its splendour, a very great Trade was carried on through Tartary &c : to the Caspian Sea. And although the decline of that Empire, added to the facility with which Europe now communicates with India by sea, will account in a great measure for the present

¹ MSS. State College of Washington, *Pritchard Collection*, i, No. 8. The paper contains a list of thirteen questions on the food of the silk worm, twenty-six questions on the worm itself, and twenty-three questions on the manufacture of silk, the answers to which Lord Macartney was to attempt to get in China. He was also asked to find out how the Chinese dyed their nankeens or cotton cloth.

defalcation; yet We have reason to think a considerable intercourse still subsists between the Western part of the Chinese Empire, through the Continent, and the South and South-East parts of the Caspian Sea. Of one fact however We are certain, namely, that during the War, or rather whilst Russia and China were not upon good terms,¹ and the intercourse was interrupted, very large quantities of Indian Piece Goods were sent from hence to Moscow. But when the intercourse was opened, the demand for Piece Goods in London ceased to such a degree as to occasion a fall of 20 per cent on the price, and which will prove a defalcation in the Company's Sale of Piece Goods amounting to at least £150,000 a year.

We are therefore very anxious to obtain every information relative to the nature and extent of this Trade, the articles of which it consists, their dimensions and prices. If possible We shall be glad to receive a few Pieces of each description as specimens. And as there will be persons in your Excellency's Suite, conversant in those articles as well as in Earthen Ware, We are satisfied that every endeavour will be used, consistent with your Excellency's situation, and which the nature of the case will permit.

We have already taken notice of the increase of the Export Trade to China, which has exceeded the most sanguine expectation; and the extent to which it is now carried would have been treated as chimerical at the time the Commutation Act passed. If we combine this circumstance with the increased quantity of Cotton exported from India,² it is a probable speculation to suppose that the Exports to China may exceed in value the Imports from thence. If this should prove the case, and which We are inclined to believe, it will

¹ The reference is to border difficulties between Russia and China which were ended by a convention in 1792 (MSS. Cornell, *Macartney Correspondence*, Nos. 17, 359).

² The value of raw cotton imported from India to China increased from T. 311,762 in 1784-5, to T. 2,232,518 in 1790-1 (Pritchard, op. cit., pp. 393, 401-2).

become necessary to turn our thoughts towards the discovery of new articles which China can furnish in payment. Of those which We import at present, Tea alone affords a prospect for increase, but which must depend altogether upon regulations in this Country. And if the hope We entertain of the success of your Excellency's Embassy shall be realized, it may occasion so considerable a reduction in the cost of our Investment in China as to reduce the value of our Imports and Exports much nearer, if not quite, to a level.

For these reasons We must intreat your Excellency's attention to such new articles of the produce or manufacture of China, as may be suitable to this or any other European Market. The heavy expenses attending all importations are Duties and Freight. The first are correctly detailed in the Consolidation Act¹; and with regard to the latter We shall think a Freight of £10 or £12 sufficient for goods sent as returns for British Manufactures and produce, as the Company are willing to sacrifice advantages for their encouragement and protection. We are the more anxious to pursue this enquiry as We fear the loss which will arise upon the importation of the precious metals will more than absorb any profit that can be expected on European Goods. At the same time we must observe to your Excellency that Gold has formerly been brought from China, although in small quantities.

Having already mentioned that an increase in the quantity of Tea to be imported, must depend upon Plans or arrangements to be adopted in this Country. We have further to observe to your Excellency, that the quantity and value of Raw Silk cannot be extended, in consequence of the large quantities imported from India, Italy, and Turkey, which from their cheapness, are more suitable for the current demand. A very moderate addition therefore to the quantity

¹ For a general list of duties on East India and China goods see *Collection of Statutes Concerning . . . the East India Company* (London, 1786), list of duties at the beginning of the volume. It appears to be found only in the India Office under Charters; see *List of General Records*, p. 76.

of China Silk usually imported would only serve to reduce the price nearer to a level with those of an inferior quality, without producing a larger value in Europe; which is the object We have at present in contemplation.

If China cannot furnish new articles in exchange, or that the precious metals cannot be substituted with advantage, it will be in vain to attempt pushing our Exports beyond the level of our Imports from thence. In the request We have made to your Excellency to use every endeavour for the purpose of introducing new articles of British Manufacture into China, We do not mean that a new article should be substituted for an old one at present in use; as Hardware for Woollens, &c : &c : It is for the interest of the Company and of the Publick to maintain and improve the ground we have got, which must not be endangered by diverting the taste of the Chinese in that respect. Fortunately their prejudices are so strong, and they are so abhorrent of innovation, that we doubt the success if the attempt were to be made; and the article the most in demand at present (coarse woollens) is the most beneficial to this Country of all its manufactures, the raw material as well as the labour being entirely British.

It is almost unnecessary for us to observe to your Excellency that the Court of Directors have concurred with His Majesty's Ministers in exerting every endeavour to promote the Success of the Embassy. The liberal manner in which every part of the Service has been conducted, and the magnificent Presents which accompany your Excellency afford the most convincing proof of the remark.

The Accounts hereunto annexed will furnish a full detail of the various articles intended for Presents,¹ for Specimens;

¹ A detailed list of the presents and specimens recently purchased is found in MSS. India Office, *China : Macartney Embassy*, xci, 543-583, and a list of those used from the Cathcart Embassy is given on pp. 584-590 of the same document. An abbreviated list for both Embassies is given in Pritchard, op. cit., pp. 247, 306.

of the miscellaneous expences which have occurred ; of the Silver shipped in order to defray those of the voyage ; and of Imprests paid on account of Salaries, viz. :

For Presents consisting of new Articles recently purchased [No. 2 in the Packet]	£13,123.12. 4
For the same purpose, consisting of those articles purchased for the late Colonel Cathcart's Embassy [No. 4 in the Packet]	2,486. 9. 6
A small Present sent to the Viceroy of Canton by the Thetis [No. 30 in the Packet]	342. 8. 6 ¹
Amount of what has been paid for miscellaneous Services [No. 5 in the Packet]	[2,100. 0. 0] ²
The cost of 20,000 [Spanish] Dollars [No. 6 in the Packet]	4,546.10. - ³
Imprests to Sundries on account of their Salaries [No. 7 in the Packet]	8,161.10. -
Total	£

The articles abovementioned will be accompanied with Patterns and descriptions of a great variety of the manufactures of this Country, which have not hitherto found their way into China, (or at least in a very small quantity) in the hope that means may be found to introduce them to notice and general consumption, under the reserve We have before mentioned.⁴

Previous to these Patterns &c. being exhibited, or the Presents offered, We must request that your Excellency will cause them to be carefully examined, to ascertain if they are in a perfect state, after so long a voyage ; and those

¹ The present consisted of furs and broadcloth.

² See MSS. Cornell, *Macartney Correspondence*, x, No. 436a. To this should be added £1,450 paid for the *Jackall*, tender to the *Lion*, Man-of-War which carried the Ambassador, and £960 paid to Sir George Staunton for expenses on a trip to Italy to get interpreters, as well as £750 expended by Lord Macartney at Portsmouth before embarking (see *infra*, Document No. 8, which will appear in a later number of this *Journal*).

³ Documents Nos. 6 and 7 in the Packet are in MSS. State College of Washington, *Pritchard Collection*, i, Nos. 6, 7. The imprests on account of salary are mainly to Lord Macartney, and amount to £7,000.

⁴ The articles taken along for distribution in the hope of developing new demands consisted of various varieties of woollens, linens, guns, swords, hardware, and Wedgwood pottery. Birmingham and Sheffield sent hardware and swords valued at £771.

which have suffered may answer for the purpose of specimens, if not for Presents. An examination for another purpose is of still greater importance, namely, whether any of the articles may not clash with the taste, the etiquette or prejudices of the Chinese. This we are induced to suggest to your Excellency in consequence of what is mentioned by the Authors we have already quoted [Vol. XV, Page 25]¹; which deserves the most serious attention, as proceeding from persons conversant with the customs and manners of the Chinese, and of whose impartiality on the subject to which we allude, we entertain not the smallest doubt.

We must likewise request that attention be given, not only to the Articles being perfect, and suited to the taste of the Chinese; but also worthy their acceptance, which will be explained in the following Extract of a Letter dated Canton the 12th December, 1789.

"The Tabbinets per Earl Mansfield and Walpole were found on opening to be mildewed and spotted, notwithstanding every possible attention had apparently been paid to the packing of them, and there was no appearance of outward damage.

"Shy Kinqua² has consented to take them at Prime Cost, but requests no more may be sent; not only on account of their being liable to spoil, but that they are held in no estimation by the Chinese, as they have a manufacture of their own, which very much resembles it, and can be afforded much cheaper."

In consequence of this advice, We should have declined sending any on the present occasion, if it had not been for the consideration that Poplins and Tabbinets³ are the only articles of Manufacture that we know of, in which Ireland

¹ See *Mémoires concernant . . . des chinois*. The article is by Père P. Martial Cibot and is entitled, "Parallele des moeurs & usages des chinois, avec les moeurs & usages décrits dans le livre d'Esther."

² See note at the end of this article.

³ Poplin and tabinet were types of cloth made from silk and wool, and having a corded appearance. In 1786-7 fourteen pieces of tabinet sold at a profit of T. 47, but in 1789-90, 140 pieces sold at a loss of T. 131 (Pritchard, op. cit., p. 162).

particularly excels ; and We are extremely desirous to try every experiment to promote the sale of the produce and manufactures of that kingdom. Additional precaution has been used in the package, so that if they cannot be preserved from spots and mildew, it must arise from an original defect in the manufacture.

Another observation will probably occur to your Excellency on this quotation, in consequence of what We have already mentioned, namely, the facility with which the Hong Merchants will receive goods injured in their quality, and without demand in the Country. To this disposition we attribute the introduction of Cornish Tin,¹ which the great scale upon which their business is conducted, enabled them to introduce and disperse, in a manner beyond the power of individuals. This disposition is founded on a liberal principle ; as We cannot discover that any addition was made to the price of Tea &c : on that account : and it will probably continue provided we do not repeat our missions of such articles as they pronounce to be invendible or improper ; and that our experiments are confined within reasonable bounds.

As we are anxious that the Embassy should be placed above the chances of embarrassment or even discredit, We have caused twenty thousand [Spanish] Dollars to be put on board the Hindostan at your disposal, and we consent, if any extraordinary emergency should arise from accident to, or deficiency in His Majesty's ship [*Lion*], that your Excellency apply a part of the Sum, for such necessary expenditure on a requisition in writing from the Commander [Sir Erasmus Gower], and on his delivering to you such warrant or vouchers as may enable us to get the same reimbursed by His Majesty's Naval Department at home ; such warrant or vouchers to be accompanied by Drafts of

¹ In 1789 the Company entered into an agreement with Cornish tin producers to export 800 tons of tin annually at £75 per ton provided a sale for it could be found in China (Pritchard, op. cit., p. 158).

the Commander to your Excellency, and to be endorsed to the Company.

We also approve your paying the following Batta [extra allowance] to Sir Erasmus Gower and to your Excellency's Guard, viz. :

To Sir Erasmus Gower as Post Captain	£500 per ann.
Lieutenant Colonel George Benson commanding; Allowance as Major of Infantry, per day	£1 17 6
Lieutenant Henry Parish	10 0
Lieutenant John Crewe	10 0
One Corporal of Light Dragoons	10
Nine Private Light Dragoons each	10
One Serjeant of Artillery	10
Three Corporals or Bombardiers of Artillery . . . each	10
One Drummer of Artillery per day	10
Fifteen Gunners of Artillery each	10
One Serjeant of Infantry	10
Two Corporals of Infantry each	10
One Drummer	10
Sixteen Private Men of Infantry each	10

The Batta to commence when the Ships approach the Island of Sumatra and to cease when the Ships pass that Island on their return.

The [Spanish] Dollar in India is valued by the Company at five Shillings; and in all your Excellency's disbursements that rate is to be fixed as the standard.

And if any expence shall arise for necessaries or otherwise previous to the Ships passing the Cape of Good Hope, your Excellency's Drafts for the same on the Company will be punctually honored, on transmitting the vouchers or the account to which the same may appertain.

As we are aware that the Embassy will occasion great alarm among the Merchants and probably the Mandarins at Canton, who will endeavour to counteract your Excellency's Plans by corruption and intrigue; We think it necessary to prepare for the contest if it should arise; and shall therefore direct the secret and superintending Committee at Canton to hold at your Excellency's disposal the further Sum of

Fifty thousand [Spanish] Dollars,¹ trusting that the same will be applied with all due economy ; and only in case your Excellency shall find it necessary to promote the success of the Embassy, after a residence of some time, and that your Excellency is satisfied that the application of the whole, or a part thereof, may be made with safety.

At a proper time We shall be under the necessity of stating very minutely all our proceedings to the Court of Directors, from whom We have received our delegated power, We must request that your Excellency will keep an Accurate Account of all proceedings relative to the Embassy, with a Journal and Diary,² to be delivered to us on your return to England. And we hope that your Excellency will not consider it as too much trouble to transmit a Copy of them from time to time, as opportunities may offer, of writing to England. We also beg that the vouchers for the expenditure of the money may be in the best order ; and that you will inform us particularly of the distribution of the Presents you carry out. Such part of them as you do not find necessary to distribute, may be delivered to the Supra Cargos at Canton, taking receipts for the same.

We have not touched upon what relates to the Trade of other Nations with China ; on which we have very little to observe, except to request that your Excellency will endeavour to obtain for us all possible information ; particularly whether the residence of Missionaries at the Court of Pekin is productive of beneficial consequences to those Nations to which they belong, or of injury to our own. It is however of great importance to explain distinctly to the Court of Pekin, that other Nations speaking our language

¹ The Committee actually set aside T. 300,000 for the use of the Embassy (MSS. India Office, *China : Macartney Embassy*, xciii, 17).

² Lord Macartney kept a detailed journal which was first published in John Barrow, *Account of the Public Life and a Selection from the Unpublished Writings of the Earl of Macartney* (London, 1807), vol. ii. A better edition of the journal is published in Helen M. Robbins, *Our First Ambassador to China* (London, 1908).

[Americans], and nearly similar in manners, navigate the China Seas. Otherwise any improper conduct on their part may subject the Commerce and the Servants of the Company to the most fatal consequences, more particularly as the Chinese are neither nice nor exact in discriminating the objects of their vengeance.

As it is possible that the Chinese Government will not permit a resident Ambassador, or any person representing His Majesty, and still less the Company, to remain at Pekin ; it will be very desireable if means could be found to place some one or more of the Missionaries, in the interest of the Company, for the purpose of conveying information and affording occasional assistance to our Supra Cargos, but without any avowed connection or sanction whatsoever. On the contrary such intercourse must be carried on in the most private manner, and all connection disavowed if discovered. A knowledge of the English or French Languages will be requisite ; and We should prefer the Italian to the French Missionaries, if there shall be a choice. As they can have no commercial connection with their Countrymen, the objects of their Mission are by no means incompatible with those we have in view ; and the expence will be very moderate. We submit however this object entirely to your Excellency's discretion ; as it depends altogether upon local circumstances.

The Secret Committee have given orders to Capt^t: Mackintosh of the Hindostan to put himself entirely under your Excellency's direction, so long as may be necessary for the purpose of the Embassy. We have enclosed a Copy of his Instructions [Nos. 16, 17 in the Packet]¹ and of the

¹ MSS. State College of Washington, *Pritchard Collection*, i, Nos. 15, 16, 17. No. 16 is a special letter of instruction dated 5th September, 1792, directing Captain Mackintosh to obey the orders of the Ambassador, to refrain from private trade, and indicating that a special set of signals were to be used on the voyage. No. 17 is a printed copy of the routine instructions given by the Court of Directors to all commanders of Indiamen. No. 15 is a Covenant signed by Captain Mackintosh in which he binds himself to refrain from private trade at all places in China except Canton without the written permission of the Ambassador. He further promises not to

Covenants [No. 15] which he has entered into ; together with an account of his Private Trade [Nos. 18, 19 in the Packet],¹ and that of his officers. There is no intention whatsoever on the part of the Court to permit Private Trade in any other port or place than Canton, to which the Ship is ultimately destined ; unless your Excellency is satisfied that such Private Trade will not prove of detriment to the dignity and importance annexed to the Embassy, or to the consequences expected therefrom ; in which case your consent in writing becomes necessary to authorize any Commercial Transaction by Capt^t: Mackintosh or any of his Officers, as explained in the Instructions from the Secret Committee.

But as We cannot be too guarded with respect to Trade and the consequences which may result from any attempt for that purpose, We hereby authorize your Excellency to suspend or dismiss the Commander or any Officer of the Hindostan who shall be guilty of a breach of Covenants or disobedience of Orders from the Secret Committee or from your Excellency, during the continuance of the present Embassy [No. 22 in the Packet].²

receive bribes or unofficial presents from the Chinese and agrees to be especially careful not to injure or offend the Chinese in any way, and at all times to conform to the orders of the Ambassador. Failure to fulfil the Covenant subjects him to civil suit for amounts named in the Covenant.

¹ As a partial means of reimbursement to commanders and officers of Indiamen the Company allowed them to carry on a limited amount of private trade. Documents Nos. 18 and 19 in the *Pritchard Collection* at the State College of Washington contain an account of the private trade allowed to the officers and commander of the *Hindostan*. This may be taken as representative of the amount allowed on other 1,200 ton ships of the period. The regular private trade manifest is as follows : Commander, £5,980 ; Chief Mate, £500 ; Second Mate, £220 ; Third Mate, £90 ; Fourth Mate, £82 ; Purser, £800 ; Surgeon, £260 ; Surgeon's Mate, £170 ; Midshipman, £20 ; Carpenter's First Mate, £10. In addition, Captain Mackintosh was allowed £1,500 more on this particular voyage. The total private trade thus amounted to £9,632. Furs and lead are the chief items in the manifests, but numerous other items, such as ginseng, drugs, glass, cloth cuttings, perfume, saddlery, cutlery, clocks, Prussian blue, carpets, hats, cards, beer, and music are included.

² The Resolution made "At a Court of Directors held on Wednesday the 5th September 1792," runs as follows : " Resolved, That the Right Honble

The small vessel [*Jackall*] which accompanies the Expedition as a Tender, must be disposed of, when she is of no further use for the service on which she will be employed ; and the proceeds paid into the Company's Treasury abroad.

In the first Letter we addressed to His Majesty's Ministers on the occasion of this Embassy We claimed on behalf of the Company a full and compleat reservation of their rights and privileges.¹ The ability, integrity and zeal which your Excellency has already manifested for the interest of the Company, induce us to rely that no measures will be taken which shall prejudice those rights and privileges. Reposing therefore entire confidence in the continuance of your zeal for their welfare and advantage on every occasion, We have the honor to be

My Lord,

Your Excellency's most obediently

most humble Servants

[Chairman] F. BARING

[Deputy Chairman] J. SMITH BURGES

EAST INDIA HOUSE,
8th September, 1792.

NOTE.—The merchant Shy Kinqua referred to in this letter was one of the leading Hong merchants. According to Liang Chia-pin's 梁嘉彬 *Kuang-tung Shih-san Hang K'ao* 廣東十三行考 (Shanghai, 1937, pp. 216–18, 285–8), his name was Shih Chung-ho 石中和. He was proprietor of the *Erh-i hang* 而益行 and was therefore sometimes referred

Lord Viscount Macartney, be authorized to suspend or dismiss the Commander or any Officer of the Hindostan, who shall be guilty of a breach of Covenants, or disobedience of Orders, from the Secret Committee, or from His Excellency during the continuance of the Embassy to China" (MSS. State College of Washington, *Pritchard Collection*, i, No. 22).

¹ For this letter see MSS. India Office, *China* : *Macartney Embassy*, xci, 63–70.

to as Shih Erh-i. He was probably known to the Westerners by a business name or *hao*, Ch'ing-kuan 經官, i.e. Shih Ch'ing-kuan, from which arose the corruption Shy Kinqua. *Kuan* was an appellation of respect and probably indicated a Fukienese origin of the family. According to Morse (*Chronicles*, ii, 181), he died in 1790 and was succeeded by his son, Gonqua, but transactions were still recorded under the name Shy Kinqua.

360.

The Kitāb al-malāḥī of Abū Tālib Al-Mufaddal ibn Salama

TRANSLATED BY JAMES ROBSON, WITH INTRODUCTION AND NOTES,
INCLUDING NOTES BY H. G. FARMER, ON THE INSTRUMENTS

THE notices of Ibn Salama are short. Al-Nawawī¹ (d. 1277) and Ibn Khallikān² (d. 1282) make reference to him only in the biography of his son, Abū 'l-Taiyib, who died in 920.

Ibn Salama was a grammarian of the Kūfan school.³ He studied under his father, Salama ibn 'Āṣim, a friend of Al-Farrā' (d. 822) and teacher of Tha'lab (d. 904); but Yāqūt says that he departed from his father's views. The *Fihrist*, followed by Ibn Khallikān, says that he met Ibn al-A'rābī (d. 846) and other learned men. Yāqūt says that he studied under Ibn al-A'rābī, Tha'lab, Ibn al-Sikkīt (d. 860), and others.

We are not told the date of his birth, but Ibn Khallikān⁴ says that his son, Abū 'l-Taiyib, died in 920, while still *ghadd al-shabāb*, which may mean in early youth; but the prominent place he receives in the notices of Al-Nawawī and Ibn Khallikān suggests that he was old enough to have made some impression. Supposing that he died at the age of 30, which is the utmost to which one can stretch Ibn Khallikān's phrase, and assuming that Ibn Salama was 60 when his son was born, this would mean that he was born in 830, and so was 13, at the most, when Ibn al-A'rābī died. But he was probably born later than 830; so, while he may have met Ibn al-A'rābī, it is questionable whether he could have studied under him.

¹ *Biog. Dict.* (ed. Wüstenfeld), p. 733.

² De Slane, ii, 611.

³ *Fihrist* (Cairo ed.), p. 109; Yāqūt, *Dict. of Learned Men* (Gibb Mem. Ser.), vi, 7, p. 170.

⁴ Būlāq ed. (A.H. 1275), i, 656.

The *Fihrist* and Yāqūt say that Ibn Salama was in the entourage of Al-Fath ibn Khāqān (d. 861). There is no information about the date of his death. Ibn Khallikān quotes Abū Bakr al-Šūlī (d. 946) as saying that he received tuition from him in 903 ; so all one can say is that he died not earlier than that year.

Ibn Salama was noted for his handwriting, and was a fairly voluminous writer. The *Fihrist* mentions nineteen of his books, all but one of which are mentioned by Yāqūt. Ibn Khallikān mentions thirteen, and Hājjī Khalifa¹ six. Al-Nawawī mentions only one by name, adding that he wrote other books on *belles-lettres* and others subjects. His works deal mainly with grammatical topics, one of them being a criticism of some of Al-Khalīl's statements in his *Kitāb al-‘ain*. He wrote also on the Qur'ān and on more general subjects.

His *Kitāb al-fākhir*, which was one of the sources of Al-Maidānī's *Majma‘ al-amthāl*, has been edited by C. A. Storey (Leyden, 1915). Brockelmann² states that this and his *Ghāyat al-adab* (which work is not included in any of the lists which I have noticed) are his only extant works. He makes no mention of the MS. of the *Kitāb al-malāhī* which is translated here.³ Dr. H. G. Farmer obtained a photostat of it when he visited Cairo in 1932, and made reference to it in *JRAS.* (1934), p. 334. I am indebted to him for the loan of this photostat in preparing the present work.

The *Fihrist*, Yāqūt, and Ibn Khallikān all give the longer title of *Kitāb al-‘ūd wa ’l-malāhī* (The book of the lute and the musical instruments).

§ 1. THE MANUSCRIPT

The present work is based on what appears to be a unique MS. in the library of the Tōp Qapū Sarai in Iastnbul. It contains 44 pages, the first being the title page. The remaining

¹ ii, 3 ; iv, 124, 344 ; v, 128, 155, 475. In the last of these *nūjūm* (stars) occurs instead of *nahw* (grammar).

² *Gesch. d. arab. Litt.*, i, 118.

³ Neither is reference made to it in the *Supplement*, i, 181.

pages have seven lines each. Some additions have been made to the title in another hand. The first is ungrammatical, as it adds *fī* (concerning) after *kitābu* which is written thus with all the vowels, and so is in the construct state. "And their names" is added after "musical instruments". As the word *malāhī* means strictly "instruments of amusement", the same hand has added *min qibal al-mūsīqā* (pertaining to music). Below the title appear the words, "The service of the owned slave Yāqūt, and in his handwriting." The text of the MS. is pointed and is very beautifully written, being the work of Yāqūt al-Musta'simī (d. 1298), the famous calligrapher and protégé of Al-Musta'sim, the last 'Abbāsid Caliph in Baghdād. On the remainder of the title-page there are notes by various people saying that they have read the MS. The whole work is in an excellent state of preservation. The copying has been done very carefully, as can be seen from the small number of textual emendations.

Ibn Salama begins with a modest reference to his attainments. He explains that he will deal first with sanctions given for the use of musical instruments. This was a delicate question, for many people considered all instruments, except the tambourine and the drums used in war or on pilgrimage, to be unlawful. So he occupies pages 5 to 16 with this subject. From page 16 to page 41 he deals with almost every musical instrument known to the Arabs, explaining, *en passant*, a few technical terms. The work ends with a reference to different types of singing.

This work, because of its comparatively early date and the standing of its author, is important. It belongs to the period of the famous Ishāq al-Mausili (d. 850), of the musical *amīr* Ibrāhim ibn al-Mahdī (d. 839), and of Mukhāriq (d. 845), the "Golden Age" of Arabian music. Indeed, the only other contemporary work of a like nature which has been preserved is the *Kitāb al-lahw wa 'l-malāhī* of Ibn Khurdādhbih (d. c. 912), and this is still inaccessible. By his quotations from early poetry and his comments on them, Ibn Salama provides us

with valuable material for understanding the nature of the musical instruments used by the Arabs.

§ 2. TRANSLATION

The Book of Musical Instruments

- P. 1 The composition of Abū Ṭālib al-Mufaddal ibn Salama, the grammarian and philologist.
- P. 2 In the name of Allāh, the Merciful, the Compassionate. Praise be to Allāh who gives understanding to whom He wills ! I seek refuge in Allāh from claiming that in which I am not proficient ; for in former times such action has disgraced those who ventured on it, so that proverbs were made about them, and they were spoken of by high and low. One such is the tradition which is handed down, “ He who pretends to have a plentiful supply of that in which he is not proficient,¹
- P. 3 is like him who wears the two garments of falsehood.” Some quote it thus : “ Of that which he does not possess.” Concerning this the poet says :—
- “ If one decks himself with that which is not in him, the proofs of testing will shame him ;
And he will run among men like a half-breed whom the pure-breeds have left on the course.”
- I was told that one who claims to be learned asserted that the Arabs were ignorant of the lute, and that they make no mention of any of its strings and its appurtenances. So I
- P. 4 resolved to clarify matters regarding the lute and other musical instruments, [and to state] who was the first to make any of them and what the Arabs said about their names and the designations of their appurtenances, for the perusal of those who are interested in any of these matters. Then I thought that I should first of all mention sanctions which have been given, in order that those who employ any of these instruments may know that there is no problem about them (Praise be to Allāh !), and that they are not forbidden.

¹ Al-Bukhārī, *Nikāh* 107, and Abū Dāwud, *Adab* 83, both read “ what he has not been given ”. Another version is given in Lane, *Lexicon*, p. 1497.

One such [sanction] is what ‘Umar ibn Shabba [d. 876] and P. 5 Muḥammad ibn Shaddād al-Misma’ī [d. 910–911], known as Zurqān, the scholastic theologian, told us. Muḥammad ibn Shaddād said, I consulted Abū ‘Āsim [d. 828]. ‘Umar ibn Shabba said, The gifted Abū ‘Āsim was consulted about reciting [the Qur’ān] to a chant, and someone said to him, Sufyān ibn ‘Uyaina [d. 813] remarks about the saying of the Prophet (Allāh bless him and keep him safe !) “ He who does not chant (*yataghanna*) the Qur’ān is not one of us,”¹ that [the word] comes from *al-istighnā*’ (to be content). | Abū ‘Āsim P. 6 replied, “ He is quite wrong.”

Ibn Juraij [d. 766–8] informed us as follows : I asked ‘Atā’ [d. 732–3] about reciting [the Qur’ān] to a chant, and he said, “ What harm is there in that ? ” ‘Abdallāh ibn ‘Umair al-Laithī told us that David, Allāh’s prophet (Peace be upon him !) had a stringed instrument.² When he recited, he played on it and wept, and made [others] weep. Abū ‘Āsim held that the chanting (*al-taghannī*) of the Qur’ān [means] prolonging and beautifying the voice in [reciting] it. Sufyān held to [the sense of] being independent (*istighnā*) | P 7. in it from every device. Now *al-taghannī* is used both of poetry and property. [An example of its use] with reference to poetry is the saying of Hassān [ibn Thābit] :—

“ If you are repeating poetry, chant it (*taghanni*) ; the chant is a training-ground (*midmār*) for this poetry.”³

Midmār here is a figure of speech, because the *midmār* for horses means [the place for] making them fit, teaching and exercising them, so that they may be in proper condition ; with which he compared the adaptation of the chant to the measure of poetry.

¹ Lane, p. 2302, inverts the phrases and gives only Sufyān’s interpretation. Abū Tālib al-Makkī, *Qūṭ al-qulūb*, i, 90, gives the same form as Lane, but says it means one who chants with a beautiful voice. Cf. Al-Nasā’ī, *Sunan*, ii, 180, for a note to the same effect.

² In Arabic, *mi’zafa*. In 1 Sam. xvi, 16, 23, David is said to play the *kinnōr*, an instrument usually identified with the cithara. Seemingly the *mi’zafa* was a cithara or lyre.

³ This verse is not included in Hassān’s *dīwān* (Gibb. Mem. Ser.).

Regarding *al-tagħannū* applying to property, another says :
 P. 8 "Many a rich man have I seen poverty overtaking, and many
 a poor man becoming rich (*tagħannā*) after [being in]
 indigence."

Ya'qūb ibn Ishaq, known as Ibn abī Isrā'il, told us that Abū Bakr ibn Mansūr ibn Saiyār reported that Yūnus ibn Muḥammad [d. 823], the teacher, said, Abū Uwais told us on the authority of Ḥusain ibn 'Abdallāh ibn 'Ubaidallāh ibn 'Abbās on the authority of 'Ikrima [d. 723-5] on the authority of Ibn 'Abbās [d. 688-9] (Allāh be pleased with him !) that the Prophet (Allāh bless him, etc.) came upon
 P. 9 Hassān [ibn Thābit] when he had sprinkled | the courtyard of his house. Along with him were his companions in two rows and a [singing-]girl of his called Shīrīn who had a *mizhar*¹ with which she enraptured the two rows while she sang to them. When the Prophet (Peace be upon him !) came along, having expressed neither permission nor prohibition, he came up to her while she was saying :—

"Have I committed a sin (out upon you both !) if I amuse myself ?"

He said : Then the Prophet (Allāh bless him, etc.) smiled
 P. 10 and said, | "You have committed no sin, if Allāh will."²

This Ya'qūb told us that Aḥmad ibn Mansūr related that Abū Salama al-Tabūdhakī³ [d. 838] said, Hammād ibn Salama reported on the authority of 'Alī ibn Zaid on the authority of Yūsuf ibn Mihrān that Ibn 'Umar called on 'Abdallāh, son of Ja'far the possessor of wings,⁴ and found him with a Persian lute.⁵ He said : "O Abū 'Abd al-Rahmān,

¹ The *mizhar* or *mazhar* of early Islāmic times was probably a round tambourine without "snares" (*autār*) or jingling apparatus (*sunūj, jalājil*). See *Enc. of Islam* (EI.), Suppl., vol. p. 74.

² Cf. Ibn 'Abd Rabbīhi, *Iqd*, iv, 91.

³ The MS. wrongly gives Al-Nabūdakī.

⁴ Ja'far is commonly called *Al-Tayyār* (the fier). When he was slain in battle Muhammad mourned for him, and said he had seen him flying with wings in Paradise.

⁵ The *barbat* (Persian lute) appears to have been of different structure from the *ūd*. The neck and sound-chest were made in one graduated piece of wood, hollow throughout. The neck of the *ūd* was solid. See EI., iv, 986 ; Farmer, *Studies in Or. Mus. Instrs.*, i, 95 f.

if you know what this is, you can have such and such." He said: Then he looked at it for a time, turned it over, | and P. 11 said: "I am Abū 'Abd al-Rahmān. It is a Rūmī balance."¹

It is related that Ibrāhīm ibn Sa'd² [d. 799–800], the author of *Al-maghāzī*, said: "For long I have thought about how the people of Al-'Irāq prohibit singing yet permit intoxicants. I was once in one of the mosques of the Anṣār along with my father, when [those present], who were about ten in number, discussed singing and said, 'Come on to Al-Ausī's [singing-]girl.' Then they arose, and I arose [and went] with them | until we entered the house of the girl's master. P. 12 He welcomed them and said, 'I do not need to ask why you have come.' Thereupon he went into one of his rooms for a short while, and soon his girl whom we had come to hear brought out her lute, saluted us and sat down. The first song I heard was on that day. She sang:—

'Have we not yet questioned the dwelling and the spring-camp
which is empty ?

The wind and the dripping [rain] have obliterated it, and it has P. 13
left no traces of habitation.'

He said: "Then every *shaikh* got up, and in the window-edges of the house there were square tambourines.³ They took them, and one of them took a drum⁴ and hung it on his neck. Then the house and its neighbourhood resounded, and the *shaikh*s of the district came in to see us. And we were in

¹ *Iqd*, iv, 94, says that Ibn Ja'far replied, "You are right; this is a balance in which speech is weighed," evidently thinking the answer clever.

² The MS. has Ibn Ibrāhīm ibn Sa'd. "Ibn" is omitted following *Iqd*, iv, 93.

³ For the *duff murabba'* see *EI.*, Suppl. vol. 73. Al-Mutarrizī says the square tambourine was forbidden although the round one was not. Tuwais, one of the earliest minstrels of Islām, played the *duff murabba'*. He was one of the despised *mukhannathūn*; so probably the legists forbade it because it was used by people of this class.

⁴ *Tabl* was the generic term for any drum. See *EI.*, Suppl. vol., s.v. "Tabl". Certain types were forbidden, notably the *kūba* or *tabl al-mukhannath*, which was shaped like an hour-glass. But the military drum and pilgrimage drum were allowed. Probably the latter type is referred to in the above story. It is known nowadays as the *jabl shāmī*, a shallow kettledrum. It is depicted in Lane's *Modern Egyptians*, chap. vi.

such a state that if Aiyūb or Ibn ‘Aun [d. 768] had been present, they would have refrained and been unable to forbid it. Then when the crier summoned to prayer, [and] they

P. 14 got up | to their places, I did not feel that any of them were sorry for what they had been doing; yet they were all distinguished people, doctors of law, and men who were held in fear and dread.” And Ibrāhīm ibn Sa‘d was playing the lute and singing.

And this Ya‘qūb ibn Ishāq told us that Dāwud ibn Rushaid and Al-Hasan ibn Shabib said that Ismā‘il ibn ‘Aiyāsh reported that ‘Abd al-Azīz ibn ‘Abdallāh [d. 780] told [the P. 15 following] on the authority of | Muḥammad ibn ‘Amr [d. 682] on the authority of ‘Atā’ ibn abī Salama ibn ‘Abd al-Rahmān ibn ‘Auf,¹—“The tambourine² was played and people sang in the time of ‘Abd al-Rahmān ibn ‘Auf on the night when he was married.”

This Ya‘qūb told us that Al-Qa‘nabī [d. 837] said that Khālid ibn Ilyās reported on the authority of Al-Qāsim ibn Muḥammad [d. c. 719–30], on the authority of ‘Ā’isha (Allāh be pleased with her !) that Allāh’s apostle (Allāh bless him, etc.) said, “ Make a show of a wedding.”³ And the Prophet P. 16 (Allāh bless him, etc.) used to | like to have the tambourine played to him.

But I intended only to mention musical instruments. Now as for singing, sanctions regarding it are many; but if I were to mention them, the book would be [too] long. My object is simply to mention musical instruments and nothing else. On that [subject] I shall mention what I hope will be sufficient, if Allāh wills.

¹ Ibn Sa‘d, *Tabaqāt*, v, 115, mentions the names of Abū Salama’s children, but does not include ‘Atā’. ‘Abd al-Rahmān (d. 652), his grandfather, was a Companion of the Prophet.

² In Arabic, *druff*. *Lisān al-‘arab*, s.v. “Ghīrbāl”, calls the instrument mentioned in this tradition a *ghīrbāl*, a name due to its likeness to a sieve. The *ghīrbāl* seems to have differed from the *mizhar* in having “snares” stretched across the underside of the face or membrane. See *EI.*, Suppl. vol., 74. It is now called the *bandair* in the Maghrib.

³ A similar, but longer, tradition is given in *Tirmidhī*, *Nikāh*, 6.

Hishām ibn al-Kalbī [d. 819–21] mentioned that the first who made the lute and played on it was a man of the sons of Qābil, some say Qābin,¹ the son of Adam, called Lamk.² He had a long life; and as he had no children he married fifty wives and took two hundred concubines. Then two girls, one of whom was called Silā'³ and the other Yamm, were born to him. Afterwards a boy was born to him ten years before he died, and he was extremely pleased. But the boy died when he was five years old, and [Lamk] grieved sorely for him. So he took him and hung him on a tree and said: | “His form will not depart from my eyes until he falls in pieces, or I die.” Then his flesh began to fall from his bones till [only] the thigh remained, with the leg, foot, and toes. So he took a piece of wood, split it, made it thin, and began to arrange one piece on another. Then he made a [sound-] chest to represent the thigh, a neck to represent the leg, a peg-box (*ibzūm*) the same size as the foot, and pegs (*malāwī*) like the toes; and to it [the instrument] he attached strings like the sinews. Then he began to play on it and weep and lament, until he became blind; and he was the first who sang a lament. What he made was called an ‘ūd (lute) because it was made from a piece of wood (‘ūd). Silā', one of his two daughters, was the first who made stringed instruments and drums.⁴

He said: And as for the pandores,⁵ the first who made them

¹ The form Qābin is unusual. Cain and Abel are usually called Hābil and Qābil, Abel coming first. For other forms of the name Qābil see *EI.*, ii, 186.

² It is vocalized thus. ‘He is the Lamech of Genesis.

³ Gen. iv, 19, says Lamech married two wives called Adah and Zillah (Sillāh).

⁴ Ibn Khurdādhbih is quoted in Mas‘ūdi’s *Murūj al-dhahab*, viii, 88 f., as saying that Dilāl bint Lamk invented stringed instruments, and Tubal ibn Lamk invented drums. Cf. Farmer, *Stud. in Or. Instrs.*, i, 55. A tradition (Tirmidhī, *Fitan* 38) mentions stringed instruments as signs of the end of the world, so it is not surprising that Dilāl is the name given to the inventor, as *dalāl* means “error”.

⁵ See *EI.*, Suppl. vol. s.v. “ṭunbūr” and Glasgow Univ. Oriental Society’s *Transactions*, vol. v, p. 26.

were Lot's people. When a beardless youth appealed to them,
P. 20 they tried to win him by playing | to him on the pandore.

As for the wood-wind instruments ¹ and all wind instruments, the Children of Israel made them only on the model of the throat of David ² (Peace be upon him !), except the flute on which one whistles, for the Kurds were the first who made it. When their flocks scattered from them they whistled to them and they gathered together.

The first who made tambourines were the Arabs, and the first who had a singing-girl was a man of the pure-blooded P. 25 Arabs.³ | He had two singing-girls called the *Jarādatān* (two locusts). They are the two about whom the proverb was made which goes: "He became a tale ⁴ [told] by the *Jarādatān*." That [refers to the fact] that when Allāh withheld rain from [the people of] 'Ād, when they were settled between Al-Shihr and Hadramaut, they sent their envoys to Makka to pray for rain for them. They lodged with Mu'āwiya ibn Bakr, because he was related to them by marriage. Then P. 26 they occupied themselves with drinking | wine and listening to the *Jarādatān* to the neglect of praying for rain. So when Mu'āwiya saw that, he recited some poetry ⁵ and told his singing-girls to sing it. When they heard it they remembered

¹ *Mizmār* is the generic term for any instrument of the wood-wind family. It was also the specific name for the oboe or clarinet, as distinct from the flute or recorder. See *EI.*, iii, 539; Farmer, *Studies*, i, 65, 77.

² According to the *Raudat al-ṣafā* of Mīr Khwānd (Trans. ii, i, 57), no less than seventy-two notes issued from the "blessed throat" of David. A voice with such a compass appealed to the imagination and became the prototype of all wind instruments.

³ pp. 21-4 of the MS. must be placed between 36 and 37. 25 is clearly the continuation of 20. Further, 24 ends with a reference to poetry which is not quoted on 25, while 37 begins with poetry without any reference to its author. As the instruments mentioned in the verses are those one would expect after 24, 37 must follow 24.

⁴ The MS. has *harīban* (plundered). This has been changed to *hadīthan* following Freytag, *Arabum Proverbia*, ii, 566 and Ibn Salama, *Al-fākhir* (ed. Storey), p. 67. Both say the proverb means that someone's affairs are publicly spoken of.

⁵ See *Al-fākhir*, p. 68.

their people, and arose and prayed for rain. I have mentioned their story in my book called *Al-fākhir*.

The Arabs are still devoted to amusement, dalliance, and love and inclination for listening [to music]. They called the singing-girl the *karīna*,¹ and they called the lute the *kirān*,^{P. 27} the *mizhar*, the *barbat*, and the *muwattar*,¹ and their poems have mentioned all these names. Among its names which are not mentioned in the poetry, but only in the Tradition, is the ‘*arṭaba*.²

Imru’ al-Qais [d. bet. 530 and 540] said³ :—

“ When I become troubled in the evening, many a delicate singing girl have I made to play on a *kirān*.

She has a *mizhar*, of harsh sound when two hands play it, which raises its voice above the army (*khamīs*).”

Khamīs here is an army. *Khamīs* is also the name of an P. 28 idol; and *khamīs* is a kind of clothing⁴ as well. In the Tradition [the saying is found], “ Bring me a *khamīs* or a *labīs*. ”

Labīd ibn Rabi‘a [d. 660] said⁵ :—

“ I pay a dear price for buying [wine] (*al-sibā’*) in every black old wine-skin (*adkan*), or dark flagon (*jauna*), which is poured out (*qudiḥat*), and whose seal is broken,

For a morning draught of pure wine and the attraction of a singing-girl with a *muwattar* which her thumb adjusts (*ta’tāluhu*). ”

Ta’tāluhu means “ manages it ”, from *ultu ’l-shai* “ I adjusted it ”. *Al-sibā’* is the purchase of wine. One says *sabā’tu ’l-khamr* [meaning] “ I bought it ”. *Adkan*[|] means P. 29 “ wine-jar ”; the *jauna* is the large jar, and *jaun* [means]

¹ *Iqd*, iv, 105, gives three of these names, omitting *muwattar*. This latter is also identified with the lute in Lane, *Lexicon*, i, 126, but it is doubtful. The same may be said of the identification of the *mizhar* and the *kirān*. See *EI.*, Suppl. vol., 74.

² The ‘*arṭaba* is another doubtful identification. In Al-Shalāhi’s *Kitāb al-imtā’* (Madrid MS., No. 603) ‘*arṭaba*, *kinnāra*, *barbat*, and *mizhar* are given as names for the lute. See Farmer, *Studies*, ii, 31.

³ See his *Dīwān* (ed. De Slane), pp. 30 f.

⁴ Cf. Lane, *Lexicon*, p. 810; *J.R.A.S.* (1935), p. 328.

⁵ Cf. Al-Tibrīzī (ed. Lyall, *Bibl. Ind.*), pp. 82 f.

both black and white. *Qudīhat* [means] its sealing-earth is broken off from it. And his phrase *ta'tāluhu* [means] "she controls and manages it"; and *iyāla* is good management of property.

Al-A'shā of the Banū Qais [d. 629], who was a pre-Islamic Arab, said:—

"Sitting round him are the boon-companions, while a *mizhar* which is played (*majdūf*) does not cease to be brought to him."

Majdūf means "played on". And there is a reading
P.30 *bi-mūkar*,¹ a wine-skin [instead of *bi-mizhar*]; | and it has its ends cut.

He said also:—

"And our *barbaṭ* is continually urging on, so for which of those am I despised?"²

"Which of those" means [different] kinds of musical instruments, because he has mentioned them.³

Its strings are called *mahābiḍ*, sing. *mihbad*; and they are the *shira'*, sing. *shir'a*. Among them is the *zīr*, and that which comes next it is the *mathnā* which some call the *thāmī*; then P.31 [comes] the *mathlath* which some call the *thālith*; | then the *banm*. The things which the Persians call the *dasātīn* (frets) are called the '*atab*'⁴ [by the Arabs]. And all that has been mentioned in poetry. Tamī ibn Ubaiy ibn Muqbil [seventh century] said:—

"There sang (*sadahat*) to us at the wine-merchants' (*tijār*) a slender-necked girl whose leg was tossing (*tarkudu*) her skirts (*majāmi'* *al-khalkhāl*),

¹ Cf. his *Dīwān* (Gibb. Mem. Ser.), p. 212, where *bi-mūkar* is the reading. This gives better sense. Taking *majdūf* in its ordinary meaning of "cut", it makes the verse say that a wine-skin which is opened is continually being brought to him.

² Read *uzrā* for *uzzā*.

³ In the *Dīwān*, p. 122, this verse follows that quoted on p. 24 of the MS. As it has "three" instead of "those", the rose, the jasmine, and the singing-girls are meant, not musical instruments. Cf. *Aghānī*, vi, 73.

⁴ Cf. *J.R.A.S.* (1937), p. 455 f., where the '*ataba* (pl. '*atab*) is said to be the "nut" (*anf*) of the lute.

[Dressed] in a single garment (*fudūl*) ; the *makhābiḍ* on a light [instrument]¹ (*ahadhdh*) which was neither harsh (*sahl*) nor coarse (*mishāl*) contending with her trilling.”²

Sadahat is “she sang”, and *sadh* is the raising of the voice. There is a reading “neither short-winded (*qut'*) nor coarse”. *Tarkudu* is “pushes”. | *Majāmi'* *al-khalkhāl* is “the place P. 32 where the anklets are collected”, meaning her skirt. The *tijār* are the wine-sellers here. The word *fudūl* means “in a shabby garment”. *Ahadhdh* is “light”, meaning a lute. *Sahl* and *mishāl* [mean] that which has not a clear sound ; and *sahl* is hoarseness in the voice.

Ibn Harma [d. c. 757] said :—

“ Perhaps a singing-girl from whom a second morning-draught is given to her chief, cares for the strings (*shirā'*).”

| Al-A'shā said³ :—

P. 33

“ And he placed the hand again over [an instrument] with frets (*utab*), singing to the accompaniment of [an instrument] with a hoarse-sounding *zīr* [string].”

Al-Saq'ab ibn Jubbān al-Tagħlibī said :—

“ And he presented his gentle-voiced singing-girl with a lute which was superior to his [other] lutes,

Lighter when carried and taken in the arms than a feather which is placed in the scales.

You find it dumb when he is eloquent, the honour of the meeting being in its humiliation.

Rauḥ put it right when it was out of tune (*'alā dīghāniḥ*),”

Rauḥ is the name of the singer. | *Dīghān* [means] there is P. 34 something in the mind which is not being uttered as was intended.

“ To adjust it after its deviation (*zaigh*) and its incapacity (*i'tināniḥ*).

Then he passed the hand to and fro over its heart,”⁴

¹ Light lutes were favoured. Ziryāb (early ninth cent.), the famous minstrel of Muslim Spain, said his lute was superior because it was one-third lighter than the ordinary instrument. See Al-Maqqarī, *Analectes*, ii, 88.

² These verses occur in the *Kitāb al-ma'āni 'l-kabīr* of Ibn Qutaiba (MS. Āyā Sōfia), p. 427. I owe this reference to Dr. F. Krenkow.

³ *Diwān* (Gibb Mem. Ser.), p. 163.

⁴ At this point, owing to the comments, the arrangement of the lines is broken. This half-line would go better with the following. There is an odd half-line in the poem, but that is allowable, as it is the *mashṭūr* variety of the *rajaz* metre.

Zaigh [means] deviating, and *i'tinān* that it is not at all in good order.

"As the fire-worshipper goes to and fro in his garden. And he honoured his little finger

With the superiority of a robber over his neighbours. And the *zīr* [string] relied on his twanging;

And the *thānī* [string] was attentive to its rivalry; and the *thālith* [string] was headstrong in its racecourse;

P. 35 And the *bamm* [string] mumbled (*barbara*) at its fellows, as an old man mumbles at his boys."

Barbara is a sound containing roughness and speed.

"There trouble passed from his friends, so that you could see the tipsy one in his shirts

Marching, having thrown away his Persian shawl, as the king marches after his queen."¹

Abū 'l-Hindī said :—

"When she adjusts the two *zīrs*,² and the *mathlath* which is near the place of the *bamm*, and the *bamm* is being struck, You see her right hand speeding on the *bamm*, and you think her left hand is counting over the frets (*al-'atb*).

P. 36 And the reed-pipe of another [girl], when it is blown, rises in answer to the pulsating of the lute, and the lute clamours."

He meant *al-'atab*, but he omitted a vowel.

Among the musical instruments are the *tunbūr*, which is the *dirrij*,³ and the *wann*.⁴

¹ The king and queen are the chess pieces.

² In early Islāmic times the lute had four strings, called from high to low the *zīr*, *mathnā*, *mathlath*, and *bamm*. The first and last are Persian words. For their adoption by the Arabs see Farmer, *An Old Moorish Lute Tutor*, p. 26, and *EL*, iii, 750. As the *mathnā* is not mentioned in the verses, it may sometimes have been called the *lower zīr* and the *zīr* proper the *upper zīr*, hence the phrase "two *zīrs*". Yet in the ninth century, as we know from Al-Kindī, a fifth string was added to the higher strings and called the *zīr thānī*. The "two *zīrs*" may therefore refer to these two strings.

³ The *dirrij* was not a *tunbūr*, although the lexicographers Ibn Sida and Al-Firuzābādī repeat the statement. The mistake arises thus. The lexicographers say that the *dirrij* is "a thing like the *tunbūr*", meaning that it is like the *tunbūr* in being a musical instrument. The *dirrij* was actually a drum with a single face, something like the *darabukka*. Ibn Mukarram says that its vocalization is *durrāij*, which is the pronunciation in Morocco to-day.

⁴ The *wann* appears to have been the harp with a lower sound-chest. Al-Firuzābādī says it was played with the fingers, and likens it to the *sanj*. This latter was, however, the harp with an upper sound-chest.

Dhū 'l-Rumma [d. 735] said :—

“ In the morning she has the strung, spotted (*arqash*) [instrument] with black back (*qarā*), which is singing as though its strings were uproarious ;

One of the *tanābīr*, it raises (*yuzhī*)¹ its voice in intoxication, its melody containing what is foreign² to the dialects of the Arabs.”

Al-qarā [means] “ the back ”, *yuzhī* “ raises ”, and *al-arqash* “ the perfume-box ”.³ | He means the locust which P. 21 gives voice in the heat and is very high-pitched.

Another said :—

“ And our *dirrij* is diligently urging on, the tambourine and the *mizhar* answering it.”

Al-A'shā said :—

“ And a *mushtaq sīnī*,⁴ and a *wann* and a Persian lute⁵ which a harp answers when it resounds.”

Al-Rā'i [early eighth century] said :—

“ And a harsh-sounding *tunbūr*, and the odour of a bundle (*dīghth*) of myrtle which penetrates to the lachrymatory ducts (*shu'uñ*).”

| *Al-dīghth* [means] “ pieces ” of myrtle, and the *shu'uñ* are P. 22 the bases of the seams of the skull, sing. *sha'n*. But it is said that they are the lachrymatory ducts. So he meant that the fragrance of the myrtle reaches there because of its pungency and sweetness.

¹ *Diwan* (Macartney), p. 578, gives *yazhā*.

² In the “ Golden Age ” of the ‘Abbāsid dynasty foreign singing-girls from Persia and *Khurāsān*, who were performers on the *tunbūr*, were favoured at Baghdād. We know that the scale of their instruments was different from that of the Arabs. See Farmer, *Hist.*, pp. 147 f.

³ Lane, *Lexicon*, p. 1135, says *arqash* is applied to a species of locust. The explanation “ perfume box ” may be due to the author thinking of the part of the instrument which looks like a box.

⁴ *Diwan* (Gibb Mem. Ser.), p. 201, has *mustaq sīnīn*. In a footnote the reading *sīnī* is given, but the editor wrongly suggests changing it to *sabī* (boy). The instrument was a Chinese *shēng*, a real mouth-organ. It was known in Persia during the Sāsānid period. See Farmer's chapter on music in the *Survey of Persian Art*. According to the *Mafātīh al-'ulūm* (tenth cent.) the Arabic name was *mustaq*, while the Persians called it *bishā'-i mushṭa*.

⁵ In the MS. *wa-mizhar* appears in smaller writing above this word, either as a v. l., or as an explanation.

- Among the musical instruments are ¹ the *mizmār*, the *mizmar*,¹ the *zammāra*,² the *nāy*,³ the *'irān*,⁴ the *quṣṣāb*, and the *mishtaq*, called also *mushtaq ṣīnī*, which is an arabicized Persian word. It is called *mushtah | ṣīnī*, i.e. it is taken in the hands. The *yara'* is the reed-pipe made of cane, to [which class] the *zanbaq*⁵ and *hanbaqa*⁶ belong.

Abū 'l-Bайдā' said :—

" Give me a drink, O Zubair, in the hollow. We have been moved, and the *zammāra* has vibrated."

Abū 'l-Tijān [fl. 813–33] said ⁷ :—

" Is there any way to shocking intoxication in the lower part of Al-Kūfa, O Qabid ?

The vessel is in Abū 'l-Tijān's hand, and above the head is a crown.

- P.24 And [there is] an *'irān* as though it were the pawn in chess, about which talk is varied (*yaftannu*)."

Yaftannu [means] he undertakes *funūn*, i.e. " kinds " of it.

Al-A'šā said ⁸ :—

^{1–1} Probably this passage should read, " the *mizmār*, the *mizmār al-'irāqī* ('Irāqian reed-pipe) . . ." Several writers speak of the 'Irāqian reed-pipe as distinct from the ordinary one. The difference is not recorded, but cf. *EI.*, iii, 541, and Farmer, *Historical Facts*, p. 142.

² For a design of the modern *zammāra* see Farmer, *Studies*, i, 84. See also *EI.*, iii, 541.

³ *Nāy* was the Persian generic term for a wood-wind instrument and *mizmār* the Arabic. *Nāy* also meant specifically a reed-blown instrument, the flute being called the *nāy-i narm* (*flûte douce*). When the Arabs adopted Persian names for some instruments, *nāy* was used indifferently for the oboe and flute. The passage above seems to refer to an oboe, *quṣṣāb* standing for a flute. Nowadays the *nāy* is a flute in most Islāmic lands. See Farmer, *Studies*, i, 65 f.

⁴ *'Irān* may be a copyist's error for *kirān*. Al-Firuzābādī (d. 1414) says the *'irān* was a horn, so an instrument of this name may have been known in his day. If so, it may have been borrowed from the Crusaders who used a *cornet d'airain*. The Arabs probably adopted merely the last word, which was not an infrequent custom with them.

⁵ MS. *rabīq*. The early Arabic lexicographers say the *zanbaq* was the *zammāra*. The name comes from the material (*sambucus*) of which it was made.

⁶ This is another rare word. La Borde, *Essai sur la musique* (1780), i 198, gives it as *hunbūqa* and describes it as a kind of flute.

⁷ cf. *Aghānī*, xviii, 119.

⁸ cf. *Dīwān* (Gibb Mem. Ser.), p. 121; *Aghānī* vi 73.

"And our witness is the *jull* and the jasmine and the singing-girls with their *quṣṣāb*."

The *jull* is the rose. It is an arabicized Persian word which Al-Aṣḥā got from the Persians because he went to [the] Kisrā.

Wāliba ibn al-Hubāb said ¹ :—

"And a *yarā'*, and the sound of a tambourine, and a *nāy*, and a P. 37
mizhar,

And a singer from whose mouth the pearls are scattered for the
drinkers."

Another said, describing a *nāy* :—

"And if the wind stirs it, it lets fall its voice, and it vibrates
like the pierced *yarā'*."

Al-Mu'lawni al-Qurai'i [early eighth century] said :—

"And the regions of Syria resounded, so that its voices seemed
to come from a *zanbaq* in the people's dwelling."

Al-Āḥwāṣ [d. c. 728] said :—

"Her throat answers the pipes of yearning as a resounding is P. 38
agitated in hollow (*zamjar*) *sambucus* flutes."

Zamjar is "hollow". He means the reed which is piped.

And he said :—

"He is not moaning plaintively,² but producing in his breast
a continuous sound from the inwards, like a *yarā'* with
hollow reeds (*hanābiq*)."

He did not sing on account of the rumbling, but sang only
on account of distress.

Among the musical instruments is the *tabl*, which is the
*kabar*³ and the *kūba*.⁴ Connected with it is the tradition of
'Abdallāh ibn 'Umar [d. 693], who said, | "Allāh's apostle P. 39
(Allāh bless him, etc.) forbade wine, *al-maisir*,⁵ the *kūba*,

¹ This ends the transposed passage. See p. 240, n. 3.

² Reading *bāghim* for *nāghim*, following *Lisān al-'arab*, xii, 249. There
the verse is attributed to Kuthayir 'Azza. Cf. Kuthayir's *Dīwān*, ii, 80.
On the same authority *yarā'* is read instead of *rughā'*.

³ The *kabar* seems to have been a drum of the *darabukka* class with a
single face, but with a cylindrical or semi-conical body. Nowadays it is
known in the Maghrib as the *aqwāl*. See Farmer, *Studies*, ii, 29; *EI*,
Suppl. vol., s.v., "tabl".

⁴ See p. 237, n. 4.

⁵ A game in which the pre-Islāmic Arabs gambled by means of arrows
for portions of a camel.

the *ghubairā*, and every intoxicant.” Backgammon is called *kūba* in the language of the people of Al-Yaman. *Ghubairā*’ is a liquor made from millet, and it is the *sukarkah* in the language of the Abyssinians.

The poet said :—

“ When the reed-pipes and the *mizhar* vibrate, the snares increase its (the *mizhar*’s) sound.

- P. 40 And the ‘ warbling ’ singer (*shādī*) sang when the tambourines and the *a!bār* answered them.”

The *shādī* is the singer, and *shadw* is singing ; but elsewhere *shadw* means to begin to undertake something.

“ The cups rained upon us the mixture of happiness, and cares and worries were far from us.”

And it is said that it [the drum] is the *daff*, the *duff*, and the *kinnāra*¹; but *kinnāra* is said to be one of the names of the lute.

‘Amr ibn al-Itnāba said² :—

“ Give me a second drink, and give my two companions a second drink, and give me³ a plentiful supply of wine to drink.

- P. 41 If I have three morning drinks, I do not care whether you call me rightly-guided, or erring.

Among us are the singing-girls who play to our youths on the tambourine, and a comfortable life.”

As for the *mi’zafa*, it was not often found among the Arabs. Only the people of Al-Yaman, such as the kings of San’ā’, Al-Janad, Najrān, Tabāla, and Jurash, were playing on it ; on which account it has only one name.

- P. 42 The first who is said to have invented the lute and to have sung a lament with it, was Lamk. | And the first who sang among the Arabs were the *Jarādatān*. Then *Jadhīma* ibn Sa’d al-Khuza’ī sang, and he had the finest voice of all men. He was called *Al-Muṣṭaliq*⁴ on account of the beauty of his

¹ Several authorities say *kinnāra* was a name for the lute. Others liken it to the pandore, drum, and tambourine. It was more probably a cithara or lyre, like the Hebrew *kinnōr*. See Farmer, *Studies*, ii, 31.

² Cf. *Aghānī*, x, 30 ; xvi, 14.

³ *Nā* (us) is written above *nī* (me) as an alternative.

⁴ *Tāj al-’arūs*, s.v. “ *slq* ”, says *Jadhīma* received this name because of the beauty of his voice, and that he was the first of the tribe of *Khuza’ā* to sing.

voice. The first of the people of Al-Yaman who sang was a Himyarite called 'Abs, who, on account of the beauty of his voice, was called Dhū Jadān.¹ The first who sang a camel-song was Muḍar ibn Nizār. That came about because he fell from one of his camels and his hand was crushed. | His camels P. 43 scattered from him, and he began to say, "Yā yadāh, yā yadāh (O hand, O hand !) ; and his voice was so beautiful that his camels gathered again. Then the Arabs sang camel-songs on that model.

Singing among the Arabs had three forms, the *naṣb*, the *sinād*, and the *hajaz*. As for the *naṣb*,² it was the song of riders, and it is that which is called "traditional", which youths³ sing. As for the *sinād*, it is| the heavy [rhythm], P. 44 having a refrain, the low-pitched voice, and the glottal hiatus. As for the *hajaz*, it is the light [rhythm]⁴ with which pasturing is done at night and amusement is sought, and which the throat finds easy.⁴ The singing of the people of Al-Yaman was called *Al-ḥanafī*.⁵

The Book of Musical Instruments is ended. And praise be to Allāh alone ! And Allāh bless Muhammad, His prophet, and his family, the pure ones, and keep [them] safe !

¹ Al-Jauharī, *Tāj al-lughā*, s.v. "jdn", says Dhū Jadān was a king of Himyar.

² The *naṣb* was a more cultured form of the camel-drivers' song.

³ In a parallel passage (*Iqd*, iv, 104) *qaināt* (singing-girls) appears in place of *fityān* (youths). But Al-Ibshīhī (*Mustaṭraf*, ii, 126), who also includes it, has *fityān*. The change from *fityān* to *qaināt* is more likely than the reverse change, so *fityān* is to be preferred.

⁴⁻⁴ *Iqd*, loc. cit., and *Mustaṭraf*, loc. cit. read "and it is that which excites the hearts and rouses the long-suffering." Both works say that the passage about the types of singing is a quotation from Abū 'l-Mundhir Hishām ibn al-Kalbī (d. 819).

⁵ MS. *hibiqqai*. The change of text, which is merely a matter of dots, is made on the authority of Mas'ūdī, *Murūj al-dhahab*, viii, 93, where it is said that the singing of the people of Al-Yaman was of two kinds, *hanafī* and *himyārī*, the former being the better. See Farmer, *Hist.*, pp. 3, 15, where it is suggested that the *hanafī* was the more recently adopted.

The Song of Songs : an Examination of Recent Theory

By H. H. ROWLEY

THE history of the interpretation of the Song of Songs is a fascinating, if inconclusive,¹ study in the ingenuity of the interpreters. Each has but to bring to the Song what he desires to find in it, and behold ! it lies plain before him. And hence the pages of the commentaries are strewn with the strange extravagances that have been imported to becloud its apparent meaning. The older allegorical theory has fallen into disrepute because it is recognized that it built on subjective fancies ; the dramatic theories have also lost the favour they enjoyed in the nineteenth century because it is recognized that the edifying plots they displayed were merely the creations of their discoverers ; the wedding-cycle theory has lost something of the impetus Budde gave it because, while its point of departure was not an editor's fancy but an actual modern practice, it has to be forced upon the Song across a great gulf of centuries rather than found there.

It is not wholly to be surprised at, therefore, that in recent years a fresh attempt to solve the riddle of the Song has been made. In the form in which it has achieved most influence it was proposed by T. J. Meek in a paper read before the American Society of Biblical Literature in 1920,² and developed in further studies by the same scholar,³ with

¹ Cf. Westminster Assembly's *Annotations upon all the Books of the Old and New Testament*, 2nd ed., 1651, i, Introduction to the annotations on the Song of Solomon (the pages are not numbered) : "It is not unknown to the learned, what the obscurity and darknesse of this Book hath ever been accounted, and what great variety of Interpreters, and Interpretations have indeavoured to clear it, but with so ill successe many times, that they have rather increased, then removed the cloud."

² Published in *AJSL.*, xxxix, 1922-3, pp. 1-14, under the title "Canticles and the Tammuz Cult".

³ "The Song of Songs and the Fertility Cult," in *The Song of Songs : a symposium* (ed. W. H. Schoff), 1924, pp. 48-79; and "Babylonian Parallels to the Song of Songs," in *JBL.*, xlvi, 1924, pp. 245-252.

collateral support from W. H. Schoff.¹ The theory is that the Song of Songs is a thinly disguised survival of an Adonis-Tammuz liturgy.

There had, indeed, been some anticipations of this view, though Meek was unaware of them when he presented his theory. For in 1906 Erbt² had given a cultic interpretation to the Song in terms of the astral theory of the Pan-Babylonian school. Its association with the ideas of that school was, however, sufficient to restrict the range of its influence, and little was heard of it.

The next form in which the theory appeared connected it with Egypt. This was presented in 1914 by O. Neuschotz de Jassy,³ who developed the thesis that the Song is a liturgy of the Osiris cult. He identified the Solomon of the Song⁴ with Osiris,⁵ and Jerusalem with Hor-Hetep, holding that the city of *peace* really means the city of the *dead*,⁶ while the Shulamite he found to be Hetepith, or Isis.⁷ He regarded the Song as concerned not with love, but with the resurrection of Osiris, and hence he interpreted the kiss in i, 2, of the priestly kiss of resurrection,⁸ and not of the kiss of lovers.

Again, however, the view commanded no attention. In a letter to the author, Loisy expressed his doubt as to whether the theory would immediately command acceptance, but thought it worthy of discussion. Little discussion was given to

⁵ pp. 16 f.

⁶ pp. 17 f.

⁷ p. 21.

⁸ p. 32. Similarly he argues that the kiss of Judas was not the kiss of betrayal, but the kiss of resurrection, which has been wrongly changed by tradition, and claims that the fact that the kiss was given in the garden of Gethsemane = נַיָּא שְׁמִינִים (cf. the part played by spices in the Song of Songs) supports this view (p. 34).

it,¹ however, and it left no ripple on the waters of scholarship. In 1919 Ebeling published an Accadian text, or series of fragments of texts, belonging to a liturgy of the Babylonian Tammuz cult,² and this was not long in reopening the issue in a fresh form, which soon achieved considerable influence in the discussion of the Song of Songs. Many Babylonian Tammuz liturgies had already been published³ prior to the appearance of this text, but Meek was at once struck with the similarities between the Song of Songs and passages here, and in 1920 presented the first formulation of his theory. The new text has been translated in part or in whole by Ebeling,⁴ Langdon,⁵ Meek,⁶ and Barton,⁷ and the differences between their renderings show that there is by no means agreement as to its meaning. The new theory, however, in no sense depends upon this particular text, for our knowledge of the Tammuz cult of Babylonia,⁸ and of the kindred rites

¹ J. Halévy devoted a few scornful pages (*Revue Sémitique*, xxii, 1914, pp. 248–255) to it, and concluded “Je renonce à répondre aux grossièretés gratuites de l'auteur et lui souhaite une plus grande dose de bons sens et de modestie”.

² *Keilschrifttexte aus Assur religiösen Inhalts*, vol. i, Heft 4, 1919, No. 158 (pp. 267–276). Cf. p. 352, where the text is described as a “Katalog von Hymnen Anfängen an verschiedene Götter”.

³ See S. Langdon, *Babylonian Liturgies*, 1913, and now, more recently, M. Witzel, *Tammuz-Liturgien und Verwandtes* (*Analecta Orientalia*, x), 1935.

⁴ Cf. *MDOG.*, 58, 1917, pp. 49 f.

⁵ “Babylonian and Hebrew Musical Terms,” in *JRAS.*, 1921, pp. 171–191. See especially pp. 183–190.

⁶ Cf. *JBL.*, xlili, 1924, pp. 245–252.

⁷ Cf. *Archaeology and the Bible*, 6th ed., 1933, pp. 518–520. It may be noted here that Barton's view of the Song of Songs is not quite clear. He quotes (pp. 515 ff.) some Egyptian parallels to the Song, and comments that they “make it clear that in Egypt love . . . was as warmly felt as in Israel, and was likewise poetically and passionately expressed”. Since the parallels adduced are not presented as liturgies, it would seem that Barton regarded the Song merely as amorous poetry. The Babylonian parallel he quotes, however, he presents as a cult poem of the Tammuz worship. But since he then defines the theme simply as two lovers' praises for one another's charms, and the delight in love, it is not certain that he attaches himself to the theory of Meek.

⁸ Cf. von Baudissin, *Adonis und Esmun*, 1911; S. Langdon, *Tammuz and Ishtar*, 1914; J. G. Frazer, *Adonis, Attis, Osiris*, 3rd ed., 2 vols., 1914; H. Gressmann, “Tod und Auferstehung des Osiris,” *Der Alte Orient*, xxiii, 3, 1923.

of the Osiris cult of Egypt and the Adonis cult of Syria, is considerable, and it is upon that knowledge, rather than upon the text which directed Meek to it, that the theory rests. It should perhaps be added that since Meek's theory was formulated the Ras Shamra texts have been published, and our knowledge of the North Syrian forms of the cult and the mythology on which it rests greatly enriched.¹

It has been already observed that Meek's presentation of the theory exercised an altogether greater influence than either Erbt's or Neuschotz's kindred views. Since he first propounded it, he has won the adhesion of Ebeling,² Minocchi,³ Waterman,⁴ Wittekindt,⁵ Snaith,⁶ Graham and May,⁷ and

³ *Le Perle della Bibbia : Il Cantico dei Canticci e l'Ecclesiaste*, 1924. Cf. pp. 22 f.: "In questo senso il Cantico è tutto quanto poesia mistica. È un inno simbolico in cui si rappresenta una viva realtà naturale ed umana : la fecondata bellezza della terra e del cielo, al rinascere dell'anno, che è poi primavera della vita per la virtù dell'amore nel rinnovarsi delle anime. E i due amanti sono i simboli vivi della universale rinascita, non oscuramente indicati come tali dal poeta medesimo. Però tutto il Cantico è un inno alla primavera, l'esaltazione lirica della nuova creazione attuata dalla potenza divina immanente nelle cose ; ed è in pari tempo anche un dramma, l'espressione rituale, in forme umane, delle profonde potenze spirituali che operano, palese insieme e occulte, nella natura visibile. . . . Il Cantico è una poetica celebrazione della primavera e dell'amore, per via di simboli mitici, aventi valore ad un tempo naturale e umano ; i due amanti figurano o sostituiscono originariamente due divinità, rappresentano un mito, o, per essere esatti, i residui letterarii di un mito."

Oesterley.¹ Not, indeed, that these scholars content themselves merely with accepting the views of Meek, for several of them give some distinct originality of form to their presentation of it. Thus Waterman, instead of holding with Meek that the old Tammuz liturgy has been revised to bring it into accord with Yahwism, believes that it was reduced to the level of folk poetry, and then made into an allegory of the political relations between the two Israelite kingdoms in the period following the Disruption. Again Snaith analyses the Song into alternating passages from two cycles, the one having associations with the spring and the other with the autumn, and brings it into connection with the stories of the rape of the maidens of Shiloh and the sacrifice of Jephthah's daughter, while Oesterley finds in the Song diverse elements, some of which are fragments of old Tammuz liturgies, and others of which belong to the wedding celebrations of simple peasants. The most detailed working out of the theory in a complete commentary on the Song has been provided by Wittekindt, who believes it is a Jerusalem liturgy prepared for the celebration of the wedding of Ishtar and Tammuz at the spring new moon.

On the other hand the critics of this view have been slow to expose its weaknesses. Two indeed, in the persons of Umberto Cassuto² and Nathaniel Schmidt,³ appeared promptly to enter a caveat, and to expose some of the difficulties of the theory, and more recently Ricciotti⁴ has briefly criticized it, while Dürr⁵ subjected Wittekindt's work to a very brief

critical review. Most of those who remain unconvinced of the relevance of the theory have been content with rejection, rather than reply.

There is, indeed, to-day a growing tendency to find in various parts of the Old Testament ritual survivals. Mowinckel¹ explains many of the Psalms as ritual texts, particularly associated with magic arts; Humbert² explains the book of Nahum as a ritual for the autumn festival in Jerusalem in 612 B.C., when the fall of Nineveh was celebrated; Balla³ explains the book of Habakkuk as a ritual text. It is therefore in full harmony with this tendency, though preceding all these theories in its first presentation, that the Song of Songs should be ritually interpreted.

Moreover, there is a growing recognition of the references to the Adonis-Tammuz cult in the Old Testament. Meek⁴ notes some of the passages, viz. Isa. xvii, 10 f. ("For thou hast forgotten the God of thy salvation, And hast not remembered the rock of thy refuge; Therefore thou plantest plantations of Adonis, And settest vine-cuttings of an alien god; On the day thou plantest, thou dost make it grow,"⁵ And in the morning thou dost make thy seed to blossom"); Jer. xxii, 18 ("They shall not lament for him, saying, Alas, my brother! or Alas, O sister! They shall not lament for him, saying, Alas, O lord! or Alas, his glory!"); Ezek. viii, 14 ("There sat the women weeping for Tammuz"); Zech. xii, 11 ("In that day there shall be a great mourning in Jerusalem, as

¹ *Psalmenstudien*, i, 1921. In *Psalmenstudien*, iii, 1923, pp. 96–101, Mowinckel argues that Ps. xlvi, whose similarity to the Song of Songs has long been recognized, is a ritual Psalm of prophetic import.

⁵ With *AV.*, following Kimhi and Ibn Ezra; so also Duhm, Marti, and Gray. Procksch objects that Pilpel from a נַבְלָה root is improbable.

the mourning of Hadad-Rimmon in the valley of Megiddo"). To these he elsewhere¹ adds Joel i, 8 ff., which he regards as a reference to the ceremonial lamentation over the death of vegetation, while Graham,² following a hint of Meek's,³ and claiming support from the Ras Shamra texts, regards Isa. v, 1-7, as the prophet's reaction to a vineyard ritual which was a feature of the popular cultus.

Most of these references to the Adonis-Tammuz cult may be readily recognized, though Schmidt⁴ is not persuaded that Jer. xxii, 18, is connected with it, and Joel i, 8 ff., is not necessarily so connected. Indeed it may be freely admitted that the Old Testament contains a great many more allusions to the cult.⁵ But this does not of itself in any way help to establish the idea that a Tammuz liturgy is preserved in the Old Testament. For none of these references recognized the cult as a legitimate one. They are merely evidence that it was popularly practised, and are on the same footing as the innumerable references to Baal worship in the Old Testament, which amply prove that that worship had a strong hold on the people, without leading us to expect to find a ritual of its practice in the Canon.

That the Adonis-Tammuz cult was widely practised throughout the ancient world, including Palestine, is freely conceded by all. In its rites someone represented the god and someone the goddess, and the ceremony culminated in their marriage and union, a union which was thought to have corresponding effects on the deities represented, and by sympathetic magic

⁵ Cf., e.g., H. G. May, "The Fertility Cult in Hosea," in *AJS*., xlviii, 1932, pp. 73-98; also H. Gressmann's important article, "The Mysteries of Adonis and the Feast of Tabernacles," in *The Expositor*, 9th series, iii, 1925, pp. 416-432; and Baudissin, op. cit., pp. 385-510.

to produce fertility in the world of nature.¹ The ritual dance figured in the ceremonies, and they were accompanied by much licentiousness, in which the temple prostitutes played their part. Nor is this all. For Sidney Smith² observes that "Fertility cults are often attended by bloodthirsty rites. Natives of those districts where such cults have been practised in modern times have given only scanty information to scientific inquirers. . . . Those rites involved the perpetuation of the life of the king by the god and goddess after a sacred *connubium*, probably enacted by a man and a woman representing the deities, a banquet, a setting forth as though to war, and the final result was a number of tombs near the *gigunus* outside the wall of the temenos, in a ditch". The cult involved something more than the mere *joie de vivre*, and the spring rejoicing in the awakening of nature. It was a ritual to achieve fertility, and the price of that achievement had to be paid. The weeping for Tammuz was no mere pretence, for the gods are not so easily deceived.

An important element of the rites represented the descent of the goddess Ishtar in search of the dead Tammuz, and their subsequent return to the upper world. It is this element which figures largely in the Ras Shamra text, to which reference has already been made,³ together with the combat whereby the goddess slew the foe of the dead god, and to this part of the ritual, especially to the descent of Ishtar, many references have been found in the Song.⁴

The first serious difficulty Meek's theory has to meet is provided by the inclusion of the Song in the Canon of Scripture.

¹ Cf. Graham and May, *Culture and Conscience*, 1936, p. 122 : "By the enactment of the accompanying drama the worshipers felt themselves to be reinforcing the power of the spoken word to influence the forces of nature so that the normal seasonal cycle might be maintained for the preservation and enrichment of human life. The psychology underlying this technique was one of coercion and manipulation."

² "A Babylonian Fertility Cult," in *JRAS.*, 1928, pp. 849-875. See p. 867.

³ Cf. also *Myth and Ritual* (ed. by Hooke), pp. 80, 82-4.

⁴ Cf. Meek, *Symposium*, pp. 60-63.

The Adonis-Tammuz cult was inextricably connected with the immoral fertility rites, which the prophets so frequently denounced. When, then, can this liturgy be supposed to have been brought into the Canon? It cannot have been brought in in pre-exilic days, for there is no evidence for the existence of a Canon at that time. Nor is it likely to have been received into the sacred corpus until very late post-exilic days, for in the first century A.D. there was still some dispute amongst the Rabbis as to whether it was properly to be regarded as Canonical,¹ and the seriousness of the doubt may be reflected in Rabbi Akiba's extravagant opinion² that the world itself was not worth the day on which this book was given to Israel, and that while all the books of the Kethubhim are sacred, this book is the most sacred of them all.³ It may well be, as Meek points out,⁴ that the reference to the Tammuz cult in deutero-Zechariah shows that the cult retained its hold over the people until a late post-exilic period, but it is highly unlikely that in the age when Judaism was developing its exclusiveness, its leaders would recognize as canonical a work associated with the fertility cult.

This difficulty Meek faces in a diametrically opposite way to that of Neuschotz. The latter boldly maintained⁵ that the

¹ Zeitlin (*An Historical Study of the Canonization of the Hebrew Scriptures*, 1933, pp. 10 f.) denies that there was any dispute as to the canonicity of the Song of Songs.

² Mishnah, *Yadain*, iii, 5: אמר רבי עקיבא חכ ושלום לא נחלה אדם מישראל על שיר השירים שלא טהרא את הדרים שאין כל העולם כלו כדאי כוים שנtran בו שיר השירים לישראל שכל החותבים קדש ושיר השירים קדש קדשים.

³ Cf. Origen (*PG.*, xiii, 1862, col. 37): "Quomodo didicimus per Mosen quaedam esse non solum sancta, sed et Sancta sanctorum, et alia non tantum Sabbath, sed et Sabbath sabbatorum; sic nunc docemur scribente Salomone esse quaedam non solum cantica, sed et Cantica cantorum. Beatus quidem is qui ingreditur sancta, sed beatior qui ingreditur Sancta sanctorum. Beatus qui sabbata sabbatizat, sed beatior qui sabbatizat sabbatorum Sabbath. Beatus similiter et is qui intellegit cantica et canit ea: nemo quippe nisi in solemnitatibus canit: sed multo beatior ille qui canit Cantica cantorum."

⁴ *AJSL.*, loc. cit., p. 3; cf. Schoff, *Symposium*, p. 106.

⁵ Op. cit., p. 71.

Rabbis knew full well the character of the Song, and that this explains why they declared its sacredness. This is to meet the difficulty by evading it. That it was sacred to one cult could give no reason whatever why it should be incorporated into the Canon of another, and vigorously hostile, cult. It is true that even in the period of growing exclusiveness, Judaism could and did receive from Zoroastrianism many ideas and beliefs, because they were not fundamentally inimical to the faith of the Jews, but it is hard to suppose that its leaders could so come to terms with the Adonis-Tammuz cult as to include its liturgy in their sacred corpus.

Meek, however, supposes that in the Song we have not the Tammuz liturgy in its original and offensive form, but that it has been revised to render it innocuous, and to harmonize it with the Yahweh cultus. Neuschotz had expressly denied any revision,¹ and had declared that the Song has remained what it was from the beginning. Moreover Waterman,² while holding that we have not the liturgy in its original form, supposes it to have undergone a totally different revision from that assumed by Meek. So far from that revision having been undertaken in the interests of the Yahweh cult, he believes that it secularized all the older religious elements.³ The Solomon of the Song he holds not to be Tammuz, the hero of the liturgy, but the villain of the piece and would-be destroyer of Tammuz, not the lover, but the would-be destroyer of love,⁴ striving to get the maiden into his power and make her forget her lover.⁵ But in the secularization of the poem, its religious significance was changed for a political meaning, and the struggle between Israel and Judah depicted.⁵

¹ Op. cit., p. 90 : "Le Cantique des Cantiques est resté ce qu'il a été dès le début, le chant funéraire d'Isis-Sulamith ou *hetepith*, cherchant son frère et époux Osiris-Salom ou *hetep*, disparu dans les ombres de l'Amenti."

² *JBL*, loc. cit.

³ *Ibid.*, p. 183.

⁴ *Ibid.*, pp. 179 f., 187.

⁵ *Ibid.*, p. 182. Cf. p. 187 : "A fertility cult liturgy reduced to folk poetry and reinterpreted by a political *motif*, that was later partly obscured by a divergent national ideal, would seem to satisfy and explain Solomon's connection with the poem."

It is clear, therefore, that Meek had failed to convince even one who was largely impressed by his theory of this alleged revision. And in truth, we look in vain in the Song for any real indication of the Yahweh cult. Indeed, Meek himself¹ somewhat naïvely remarks, "Rather strikingly Yahweh never once appears in the book. When the liturgy was incorporated into the Yahweh cult, it was deemed sufficient to transfer the titles to him without adding his name." Surely this was a strange revision, which left traces of the rejected cult everywhere in the book, but which left the new cult unmentioned. An intelligent reviser would have taken care that the Yahwism in whose interests the work was revised would be unequivocally displayed in the book, and not left to the reader to supply.

It is true that Schoff attempts to supply Meek's deficiency, and to explain the nature of the alleged revision. The name of David has long been connected with the divine name Dod,² and both Meek³ and Schoff⁴ adopt this view, and identify Dod with Tammuz. They also identify Shelem, from whom they hold Solomon to have been named, with the same god. From this Schoff concludes that both David and Solomon recognized the Tammuz cult, and he suggests that the abortive effort of Adonijah to secure the throne was part of a puritan move to abolish this worship. Naturally, therefore, he holds that when the Temple was built the Tammuz cult found a place in it. He says,⁵ "There is nothing intrinsically impossible, therefore, in the presence of the Tammuz cult in the temple or in the survival in some form of its ceremonial."⁶

¹ *Symposium*, p. 56.

² Cf. Sayce, *Hibbert Lectures*, 1887, pp. 56 f.; Winckler, in *KAT.*, 3rd ed., 1903, p. 225.

³ *AJSL.*, loc. cit., pp. 4 ff.; *Symposium*, pp. 54 f.

⁴ *Symposium*, pp. 88 f. ⁵ *Ibid.*, pp. 94 f.

⁶ Cf. Graham and May, *Culture and Conscience*, 1936, p. 239: "While it is too daring to affirm that Solomon's temple was oriented as it was with reference to the enactment of some such cycle of nature myths as was in use in the cultus at Ras Shamra, the well-attested place of solar features in the Jerusalem cultus makes such a possibility not unreasonable."

With all this no fault can be found. For there can be no doubt that many practices found a home in the Temple though later conscience condemned them, and it is highly probable that the popular Tammuz rites were observed through long periods even in the Jerusalem sanctuary. Nor would the mere survival of a Tammuz liturgy from Jerusalem appear at all incredible. It is its survival in the Canon of the Old Testament which needs to be shown to be probable.

Nor does Schoff's alleged double revision succeed in this task. For the first revision he supposes the Song to have undergone was merely an adaptation to the conditions of the Temple. He has made an elaborate study of the Offering-lists in the Song, and claims that one hundred and thirty-four of the terms have reference to the Tammuz cult, and one hundred and twenty-six to the early sanctuaries. The impressiveness of this conclusion vanishes on examination, however.

We may take as an example his lists for chapter i, where he finds the Tammuz cult in *wine, vineyards, flock, kids, king, vineyard, doves, and couch*, and the early sanctuaries in *ointments, chambers, tents, curtains, veil, steed, chariot, circlets, pearls, beads, studs, gold, silver, table, myrrh, beams, cedar, panels, cypress*. It is at once clear that, if this analysis of the reference of the terms is justified, the revision was not to bring the work into accord with the fundamental religious ideas of Yahwism, but merely to adapt the still unchanged fertility rite to the Temple *venue*. It was in no sense a revision that accommodated the Tammuz ritual to Yahwism, or that could for a moment satisfy the objections of the prophets to the fertility cult,¹ and it can hardly be supposed that such a revision would have sufficed to win for the ritual recognition from the later leaders of Judaism.

Nor is the case improved by the second revision which Schoff supposes the work to have undergone, to adapt it to

¹ Schoff says (*Symposium*, p. 98): "It began as an early Canaanite ritual. It received additions as that ritual was adapted, under protest by the prophetic party, to the temple services at Jerusalem."

the Second Temple. For here he finds seven terms to indicate the extent of the revision, but as two of them are duplicates, they are reduced to five. These are *spikenard*, *henna*, *palanquin*, *saffron*, and *aloes*. It is hardly fair to ascribe to the supposed reviser such complete incompetence for his task. For not one of the five terms even points to the Second Temple at all. It is true that Schoff adduces evidence from the Talmud and the Jewish Prayer Book to show that amongst the ingredients of the ceremonial incense and the anointing oil were *spikenard* and *saffron*,¹ but since Mk. xiv, 3, Jn. xii, 3, show that spikenard had other uses, quite unrelated to the Temple ritual, no necessary connection with the Temple can be established. A reviser who wished to re-adapt this ritual to accord with the practices of orthodox Judaism would have taken care to use, not terms that were destined to appear centuries later in the Talmud, but terms that pointed unmistakably to the Law contained in the Pentateuch. For Schoff holds that this second revision took place at a post-Alexandrine date,² and we know from the Chronicler's work that when a Jew of that age revised history he left the marks of his revision, and the marks of the Pentateuchal law, unmistakably upon it. We have no right to assume that in a revision of ritual for use in the Temple, where it was far more important to secure accord with the sacred Law, the reviser would proceed in so meagre and ambiguous a way.³

Moreover, four of the five terms of this alleged revision are found only in the Song of Songs, and while the fifth (*aloes*) is indeed found in the Pentateuch, it is in the Balaam oracles.⁴ But even if all five terms pointed unequivocally

¹ Ibid., p. 85.

² Ibid., p. 82.

³ Reference has been made above to Gressmann's view that the Feast of Tabernacles goes back in its origin to Adonis rites (*Expositor*, 9th series, iii, 1925, pp. 416-432.) Its assimilation to Yahwism has, however, been altogether more thoroughgoing than this mere pretence of a revision which is assumed for the Song.

⁴ Num. xxiv, 6. The word is also found in Prov. vii, 17, and in Ps. xlv, 9. In the two former passages it is masculine in form, but in Ps. xlv, 9, it is

to the Temple, they would still be quite unrelated to the essential ideas of Yahwism. The fundamental *differentiae* between the fertility cult and Yahwism were not to be found in these things, and a revision which consisted merely in rubbing a little ointment on the older ritual, and which failed to bring out the real qualities of the faith in whose interest it was carried through, would be left to exist in the mind of the interpreter, rather than in the achievement of the reviser.

Nor can we be satisfied that Schoff's analysis rests on any substantial ground. For Meek¹ finds two of the five terms which Schoff regards as marks of the second revision to belong to the old fertility cult, viz. *henna* and *palanquin*, and Wittekindt² agrees, so far as *henna* is concerned. And since Schoff is himself doubtful of *aloes*, the marks of this revision become woefully slight to account for the strange acceptance of a Tammuz ritual into the Canon of Judaism.

Furthermore, in Schoff's first list are some things which Meek³ regards as marks of the Tammuz cult, viz., *myrrh*, *cedar*, *cypress*, and several which Wittekindt holds to belong to that cult, e.g., *myrrh*,⁴ *table*,⁵ *steed*,⁶ *pearls*,⁷ *wall*,⁸ *windows*,⁹ *lattice*.¹⁰ The alleged revision is therefore both doubtful in itself, and altogether inadequate to give to the Song a definitely Yahwistic character.

Nor must we omit to observe that Meek¹⁰ says, "To make

feminine, as in Ct. iv, 14. Since Meek and Schoff regard Ps. xlv as another surviving fragment of fertility cult liturgy (cf. *Symposium*, pp. 49 n., 108), it is surprising that this word is not emphasized as a further link between them, associated with the cult.

¹ *Symposium*, p. 58.

¹⁰ *AJSL*, loc. cit., p. 14.

it still more acceptable the panegyric on love (8 : 6 f.) crept into the text, and lo, in a generation or two the book had become canonical, ‘The Song of Songs’!” This is surely the strangest of all the suggested revisions, and Meek abstains from indicating how it could have helped. For he regards viii, 6, as a definite bit of the fertility rite, and says elsewhere,¹ “This in its original context was manifestly a reference to the power of the love of the goddess to win the god back from the netherworld despite the floods and other obstacles that lay between this world and the next.” Moreover, Schoff² finds in viii, 6 f., one mark of the Tammuz cult, and three marks of what he calls the first revision.³

The incompetent triviality of this alleged revision is the more surprising, since when Hebrew writers elsewhere used material which they had taken over from non-Yahwistic sources, they displayed an altogether greater skill in assimilating it to their own religious ideas. Thus, while there are undoubtedly connections between the Creation story in Gen. i, and the Babylonian Creation Epic, all the cruder elements have gone, and to the whole there is given a nobility which belongs to the Hebrew writer, and not to his source. If Tiamat survives, it is as the innocuous תִּמְתָּ, and the majestic God is not left to the reader’s imagination to supply, but is dominant in the story.

Again, the ingenuity with which Tammuz is imported at every point by the advocates of this new theory can only create grave doubts as to the soundness of the theory. If a writer cannot mention such common things of experience as *shepherd, vine, vineyard, dove, gazelle, apple, cedar, palm-tree, garden*, or *hyacinth*, to name some things from Meek’s list of alleged allusions to the Tammuz cult, without being held to be writing of that cult, the way of letters for all but devotees of Tammuz is made very hard, and when to these we add some

¹ *Symposium*, p. 62.

² *Ibid.*, p. 120.

³ Cf. also Wittekindt, *op. cit.*, p. 57, who again interprets *in sensu obsceno*.

further terms from Schoff's list, *flock*, *kids*, *king*, *couch*, *fruit*, *flowers*, *blossoms*, *bed*, *lions*, *leopard*, *sister*, *bride*, *honey*, *milk*, *spring*, *fountain*, *waters*, *dew*, *maidens*, *moon*, *sun*, *nuts*, and *dance*, the poet's case becomes desperate indeed. For how could one write a love lyric in any language if such terms must be excluded from his vocabulary ? The fact that these terms occur in relation to the Tammuz cult is no proof that they only had relation to that cult, or Tammuz is everywhere.

I am not persuaded that even the word **דָּבָר** points necessarily to Adonis. That the word is derived from the divine name may be readily granted, without any acknowledgment that in all periods those who used the word thought of the god. The English word *joyful* is etymologically connected with the name of a pagan deity, and once denoted the disposition of one born under the planet, Jupiter. But it has acquired a sense which is independent of the superstition which lies behind its etymology, and it can to-day be used without exposing one to the charge of superstition. In the same way, while **דָּבָר** = *beloved*, and **דָּבָרִים** = *love* are doubtless derived from the name of a god, they could be used without necessary association with that god, just as **מְתָה** = *death*, though etymologically connected with the name of the god who is frequently mentioned in the Ras Shamra texts, Mot, could be used on the lips of Hebrews without any reference to this particular god. Love and death are normal experiences of men and women in all ages, and it were unreasonable to deny them the right to mention them without being charged with idolatry.

If the method of this theory should be applied to the whole of the Old Testament with something of the energy with which Cheyne applied his Jerachmeel theory, or the astral theorists their ideas, there would soon be little of it left without connection with the Tammuz cult.¹ It could quite easily be shown by this method, for instance, that Psalm xxiii is a Tammuz

¹ The process has, indeed, already begun, for W. E. Staples now resolves the book of Ruth into a Tammuz liturgy (*AJSL.*, liii, 1936-7, pp. 145-157).

liturgy, which has been thinly disguised and adapted to its position in the Psalter by the simple expedient of substituting *Yahweh* for *Dod* or *Adon* in the written text of the first and last verses. Its heading proclaims it a Psalm of David, which can be readily understood to be a mispointing of the name of the god, and rendered a *Psalm of Dod*. In the first verse we find mention of the term *shepherd*, which is said to be a mark of the Tammuz cult,¹ and in the second verse "he maketh me to lie down in green pastures" reminds us of Ct. i, 16, "our couch is green," while the *waters* again belong to Tammuz.² In the following verse "he bringeth back my soul" might be found to point to the resurrection of Adonis-Tammuz, while righteousness could be read as *Sedek*, the god of Jerusalem,³ who is identified with Shelem,⁴ and therefore with Tammuz.⁵ The *valley* of verse 4 recalls the *valley* of Zech. xii, 11, associated with the Tammuz cult, and the *deep darkness* (E. V. *shadow of death*) is doubtless able to be explained as the underworld to which Adonis went.⁶ The *table* of verse 5 is again connected with the Tammuz cult,⁷ and recalls Ct. v, 1, "Eat, O friends and drink; Yea drink abundantly, O beloved," while the *oil* recalls the frequently mentioned unguents of the Song.⁸

¹ So Meek, *AJSL.*, loc. cit., p. 6, and *Symposium*, p. 58.

² So Schoff, *Symposium*, pp. 117, 120.

³ Cf. Oesterley and Robinson, *Hebrew Religion*, 2nd ed., 1937, p. 177.

⁴ So Winckler, *KAT.*, 3rd ed., 1903, p. 224.

⁵ So Meek, *Symposium*, p. 53.

⁶ W. C. Graham has indeed already given this explanation (*Journal of Religion*, xiv, 1934, p. 328). He renders the verse, "Yea, though I walk through the valley of Mot's shadow, I will fear no evil for thou art with me," and equates Mot with the Mot of the Ras Shamra texts.

⁷ So Wittekindt, op. cit., p. 98.

⁸ The same word for *oil* is found in Ct. i, 3, and Meek (*Symposium*, p. 73 n.) gives it fertility connotation, and connects it with the cult. For the connection of the *table* and the *oil* with the cult, cf. Neuschotz's argument (op. cit., pp. 34 f.) that the Passion narratives of the New Testament are merely a reflection of the cult, and that it was necessary to make Jesus die three times, each in a different way. Of these one was in Gethsemane, the garden of *aromatic oils*, and the second was at the table of the Last Supper. Neuschotz finds special significance in the name Gethsemane, or גת שמנים, which contains the same word for *oil* as we find in Ps. xxiii, 6, and Ct. i, 3.

Two further points made by Meek in support of his theory have yet to be examined. The first is his claim¹ that the word זָמֵר in ii, 12, is an indication that we have here a liturgy, since this is a technical term for such a liturgy, and the second is the allegedly significant fact that the Song belongs to the Passover liturgy of the Jews.

Dealing first with the claim that זָמֵר is a technical term for such a liturgy as is found in the Song, we may note that Schmidt² has replied that the word had certainly a wider use, as we find from Rabbi Akiba's oft-quoted words, where בְּמִין זָמֵר would appear to mean "as a kind of secular song".³ It is not, indeed, certain that the word means song of any kind in Ct. ii, 12.⁴ Meek dismisses⁵ the suggestion of Ehrlich and others⁶ that it here means *the pruning of vines*, on the ground that pruning is not done

¹ *Symposium*, p. 49 f.

² *JAOS*, loc. cit., p. 159. Cf. Cassuto, *GSAT*, N.S., i, 1925-8, pp. 169 f.

³ Tosephtha, *Sanhedrin*, xii: רַבִּי עֲקִיבָא אֹמֵר הַמִּנְעָן קָוֶלׁוּ בְשִׁיר הַשִּׁירָם בְּבֵית הַמִּשְׁתָּחָה וְעֹשֶׂה אֶתְכָּן בְּמִין זָמֵר אֵין לוֹ חָלֵק, which may be rendered "Rabbi Akiba says he who sings the Song of Songs with a trill at a banquet, and treats it as a common ditty, has no portion in the world to come". With this cf. T.B. *Sanhedrin*, 101a: תָּנוּ רְבָנֵן הַקּוֹרֵא פְּסֻוק שֶׁל שִׁיר הַשִּׁירָם וְעֹשֶׂה אֶתְכָּן: בְּמִין זָמֵר וְהַקּוֹרֵא פְּסֻוק בְּבֵית מִשְׁתָּחָות בְּלָא זָמֵן מִבְּיאָ רַעֲהָ לְעֹלֵם. A. Lods (*RHR*, lxxxii, 1920, pp. 221 f.) objects to the rendering "banquet" in these passages, and thinks the meaning is "the house in which a wedding was being celebrated", and so seeks to find here some additional support for the Wetstein-Budde view of the Song. Similarly U. Cassuto (*GSAT*, N.S., i, 1925-8, p. 37).

⁴ R.V. "singing of birds" can claim little justification, for, as Bloch says (*AJS*, xxxviii, 1921-2, p. 115), wherever this word is used of singing, it refers to human singing.

⁵ *Symposium*, p. 50.

⁶ The view is, of course, very much older than Ehrlich, for it is represented in the *LXX* καὶ τρόπος τῆς τομῆς ἔφθακεν; in the Peshitta **وَتَنَعَّصُ**; in the Vulgate, *tempus putationis advenit*; and in the Arabic **وَقَدْ بَلَغَ أَوَانَ الْقَطْعِ**. Cf. also the comment of Ibn Ezra quoted in the following note.

so late in the spring, and Snaith¹ asks ‘Who ever pruned when the flowers were in blossom?’ But Snaith finds in the Song two alternating groups of passages, the one having associations with the spring and the other with the autumn. He believes the Song is intimately connected with the two ritual dances of maidens and youths celebrated outside Jerusalem in Mishnaic times, the one on the fifteenth of Ab, and the other on the Day of Atonement.² The former group, he says, has associations with the spring, but its setting is in the time of the fruits of the gardens in the height of summer.³ It may then be relevantly recalled that in the Gezer Calendar the month יְרֵדָו זֶמֶר follows the month of general harvest, and precedes the harvest of summer fruits. Since all the other items of this calendar are connected with agricultural operations, it is probable that this is also, and that it is rightly rendered *the month of vine-pruning*, with Lidzbarski,⁴ Gray,⁵ Ronzevalle,⁶ Driver,⁷ Gressmann,⁸ and Diringer.⁹ The reference is then to the second pruning.¹⁰

¹ *AJSL.*, loc. cit., p. 131 n. Cf. also Ibn Ezra: וַיֹּשֶׁת אָמָרִים בַּי... חַדָּא מֵן וּבְרַמֵּךְ לֹא תְּהֻמֵּר וְאִינְנוּ עֲתָה but it was not the time for it”.

² *AJSL.*, loc. cit., p. 138.

³ *Ibid.*, p. 136. It is interesting to set this against the view of Meck, Schoff, and Wittekindt, discussed below, that the Passover reading of the Song is evidence that it was a spring ritual. For the connection with a later season in the year, in relation to Budde’s wedding song theory of the origin of the book, cf. Dalman, *Palästinischer Diwan*, 1901, p. xii: “Nebenbei sei auch erwähnt, dass nicht der Frühling, sondern der Herbst in ganz Palästina die beliebteste Zeit zu Hochzeiten ist, weil man dann aus dem Ernteertrag das zur Brautzahlung nötige Geld gelöst hat und außerdem nach Vollendung des Dreschens müssige Zeit besitzt.” Cf., too, H. Granqvist, *Marriage Conditions in a Palestinian Village*, ii, 1935, p. 32: “There is always a certain air of foolishness attached to those who do not know that summer is the time for weddings. . . . It is a striking fact that although the summer is so long, a wedding is often postponed till the autumn.”

⁴ *PEFQS.*, 1909, p. 29, and *Ephemeris für semitische Epigraphik*, iii, 1909–1915, p. 41.

⁵ *PEFQS.*, 1909, p. 31.

(For notes 7–10 see p. 270.)

⁶ *Ibid.*, p. 110.

The other point, which is made by both Meek¹ and Schoff,² calls rather for notice than for refutation. They claim that it is significant that the Song belongs to the Passover liturgy of the Jews, since the Passover is a spring festival, while the Adonis festival was also observed in the spring.³ Schoff observes that its incorporation in the Passover liturgy clearly indicates that it has been brought down from the primitive spring festival. Meek, however, admits⁴ that this practice was only officially adopted in the middle ages, and this admission robs the practice of any evidential value for the original use and purpose of the Song. Against it may be set the statement of Theodore of Mopsuestia⁵ that neither Jews nor Christians had ever read the book in public. As Schmidt observes,⁶ we can hardly suppose that Ecclesiastes

¹ *Notes on the Hebrew Text of the Books of Samuel*, 2nd ed., 1913, p. vii.

² *Altorientalische Texte zum Alten Testament*, 2nd ed., 1927, p. 444.

³ *Le iscrizione antico-ebraiche palestinesi*, 1934, p. 5.

¹⁰ So Dalman, *PEFQS.*, 1909, p. 119: "Zāmīr can, neither here nor in Cant. ii, 12, mean the first pruning of vine, which is done in March, but the second pruning in June or July." It should perhaps be noted that Vulliaud, *Le Cantique des Cantiques d'après la tradition juive*, 1925, pp. 38 ff., defends the meaning *cutting* for זָמֵר, but explains it in connection with the law of Lev. xix, 23 ff. (cf. Mishnah, *Orlah*). In this he follows the interpretation of the Cabballists. The Targum also found the meaning *cutting* in the word, but interpreted it of the cutting off of the Egyptian first-born—עַד קְטֹנָה בָּבֶרִיא מְתָא.

¹ *AJSL.*, loc. cit., p. 4, and *Symposium*, p. 49.

² *Ibid.*, p. 86.

³ It should, however, be observed that Lagrange (*Études sur les Religions sémitiques*, 1905, pp. 305 f.) and Baudissin (*Adonis und Esmun*, 1911, pp. 121–133) maintain that the Adonis rites were celebrated in the summer and not in the spring. Cf. Jastrow (*Religion of Babylonia and Assyria*, 1898, p. 547): "The Tammuz festival was celebrated just before the summer solstice set in."

⁴ *AJSL.*, loc. cit., p. 4 n. Cf. Cassuto, *GSAI*, N.S., i, 1925–8, p. 169: "Ma occorrerebbe prima dimostrare che quaest'uso risale a un'alta antichità, il che non sembra probabile, non trovandosi esso ricordato prima del Masseketh Sôpherîm, che appartiene, come è noto, all'epoca gaonaica."

⁵ "Unde nec Judaeis, nec nobis publica lectio unquam cantici cantorum facta est" (Mansi, *Sacrorum Conciliorum nota et amplissima collectio*, ix, 1763, col. 227; cf. Migne, *PG.*, lxvi, 1864, col. 700).

⁶ *JAOS.*, loc. cit., p. 156.

was written as a vintage hymn, or Ruth as a Pentecostal story, and we are therefore scarcely bound to suppose that the Song was written for a spring festival.

It should, however, be added that Wittekindt¹ repeats the argument of Meek, but disputes his admission that our evidence for the reading of the book at Passover is only late. He discounts the statement of Theodore of Mopsuestia, and finds significance in the fact that Hippolytus expounded Ct. iii, 1-4 at Easter, and that the Targum expounds part of the Song in relation to the first Passover and the Exodus from Egypt. That this interpretation cannot naturally be got out of the Song itself is held to point to the fact that behind the Targum lies the already existing custom of reading the book at Passover, and Wittekindt therefore concludes that this practice may go back to the beginning of the Christian era. A very slight study of the history of the interpretation of the Song should suffice to show that innumerable meanings which cannot naturally be got out of the Song have been read into it, and that they are evidence for nothing whatever but the fancy of the interpreters, while for Hippolytus' choice of Easter for the exposition of Ct. iii, 1-4, we need look no further than the nature of the interpretation given to the Song in the Early Church.² Moreover, even if it were proved conclusively that the Song was read at Passover as early as the beginning of the Christian era, it would not establish any community of origin between Passover and the Song. For as Dürr³ points out, Passover was kept at the full moon, whereas Wittekindt⁴ finds the origin of the Song in the wedding of the Sun god and the Moon goddess that was celebrated at the spring new moon. Whenever the reading of the Song of Songs at Passover began, its choice for reading

¹ Op. cit., p. 199 f.

² Cf. Cyril of Alexandria's view that iii, 1, refers to the women who sought Jesus on the Resurrection morning (cf. Migne, PG., lxix, 1864, col. 1285).

³ OLZ., xxxi, 1928, col. 115.

⁴ Op. cit., pp. 187 f., 191 f.

at that festival was natural, since the Song is full of the springtime, and since the spring is not merely the season of Adonis, but the time of love all the world over.

The case for the Adonis-Tammuz liturgy theory, therefore, does not seem to be adequately supported, and we need not yet regard the Song of Songs as the liturgy of a pagan cult that was abhorred of the prophets. At the same time, it may be freely allowed that many of the allusions in the Song may genuinely refer to elements of the Adonis-Tammuz cult,¹ whether found in the practice of the poet's contemporaries, or inherited in speech from an earlier age.²

In my view the poems are no more than they appear to be, songs which express, albeit with a boldness of physical imagery which is alien to the manner of our age, the devoted love of two lovers. I do not hold, with Toy,³ that their unity is merely a unity of emotion, but believe them to be the work of a single author. This is, of course, in no sense a new view,⁴ but it appears to me to be still the most probable solution of the ever-fascinating riddle of the Song. Its songs were not written to serve any cult, whether of Adonis or of Yahweh, but to express the warm emotions of youthful hearts. And,

¹ Cf. Jeremias, *ATLOE.*, 4th ed., 1930, p. 670, where Ct. iv, 8, is held to be an allusion to the Tammuz legend. Cf. Bertholet, "Zur Stelle Hohes Lied, iv, 8," in *Baudissin Festschrift* (*BZAW.*, xxxii), 1918, pp. 47-53.

² Cf. Eissfeldt, *Einleitung in das Alte Testament*, 1934, pp. 533 f. : "Indes bleibt bei genauerer Nachprüfung dieser Theorie (i.e. Wittekindt's) nichts weiter übrig als die freilich sehr beachtenswerte und auch sonst bedeutsame Wahrscheinlichkeit, dass in Israel, wie anderswo in der Welt, die Sprache der Liebenden durch die mythisch-kultische Diktion, insofern sie das Verhältnis von Gott und Göttin zum Gegenstand hat, beeinflusst worden ist, wie auch umgekehrt der Mythos bei der erotischen Poesie Anleihen gemacht hat." Cf. also Dürr, *OLZ.*, xxxi, 1928, col. 115 : "Es dürfte sicher sein, dass manche Züge der Ischtar auch auf die orientalische Liebespoesie eingewirkt haben."

³ *Jewish Encyclopaedia*, xi, p. 467a.

⁴ It connects with the view advanced by Herder, *Lieder der Liebe*, 1778, pp. 89-106; Reuss, *Die Geschichte der Heiligen Schrifte Alten Testaments*, 1881, p. 223, and many other writers. Cf. the quite recent work of H. Wheeler Robinson, *The Old Testament: its Making and Meaning* 1937, pp. 161 f.

therefore, quite naturally, since Adonis-Tammuz rites were deeply imbedded in the popular superstition and speech,¹ they are adorned with allusions to those rites, just as our own lyrical poetry is adorned with innumerable allusions to the mythology of Venus and Cupid.

As I have said elsewhere, I do not think this view means that the Song is unworthy of a place in the Canon of Scripture, as was declared by Ibn Ezra,² and as has been maintained

¹ Already, in 1919, before Meek propounded his theory, Dussaud had recognized this. He wrote (*Le Cantique des Cantiques*, 1919, p. 29) : " L'identification de l'amante avec la nature nous place sur un terrain familier au mythe, en particulier au mythe d'Eschmoun-Adonis. En effet, les deux poèmes du bien-aimé comportent non seulement l'identification du jeune homme au printemps et de la jeune fille à la nature, mais encore la fuite de l'amant vers la montagne et sa poursuite par l'amante. Le rapprochement marque à quel point la société israélite était encore imprégnée par les cultes naturistes ; mais il n'y a pas lieu de pousser la comparaison plus avant. Après avoir écarté ces poèmes des rites nuptiaux, nous ne songeons nullement à y reconnaître l'écho de la liturgie des Adonies." A. Lods (*RHR.*, lxxxii, 1920, p. 223) says that in this view Dussaud " obéit très certainement à un sentiment juste".

² See the Preface to his commentary on the Song, *להווות שיר השירים בדבורי השק כי אם על דרך משל ולול השק גודל מעלותו לא נכתב בסוד בחבי הקדש* " Abhorred, abhorred be the idea that the Song of Songs is in the category of love songs, but rather has it the character of a parable; and were it not for the greatness of its excellence it would not have been incorporated in the corpus of sacred writings." Cf. first recension (H. J. Mathews, *Abraham ibn Ezra's Commentary on the Canticles after the first recension*, 1874, Hebrew part, p. 9) : *היללה היללה להוות בדבורי :* (9) *השך כי אם על דרך משל . . . ולולו הוותו במעליה גודלה שנאמר ברוחה קדרש לא הוות מטהמא הידים* Cf. also Jephet ibn Ali (*In Canticum Canticorum commentarium arabicum*, ed. by J. J. L. Bargès, 1884, on i, 1) : *قال يقع لبعض من لا يفهم معناه انه قول عاشق وزوجه وليس شلمة عليه السلام من يدخل في هذا الباب واتنا قال هذا ال شير ب روح القدس معربا عن جماعة يسرائيل وعن تميمي درك وعن ايلي يسرائيل وعن زمه which Bargès (p. 6) renders " Ne cadat in mentem eorum qui illius sensum non capiunt, sermonem hic haberí alicujus viri meretricem amantis; nullatenus enim computandus est Salomon (cui salus !) inter eos, qui talem januam ingrediuntur; verum enim vero Spiritu Sancto affiliatus istud dixit Canticum, verba nimis dans congregationi Israel, et loquentes inducens Immaculatos viae, Fortes Israel et germen Davidicum."*

by a long line of writers, including, quite recently, Dennefeld.¹ For "the Church has always consecrated the union of man and woman in matrimony, and taught that marriage is a divine ordinance and a sacrament, and it is not unfitting that a book which expresses the spiritual and physical emotions on which matrimony rests should be given a place in the Canon of Scripture".²

At the same time, it is quite certain that its inclusion did not rest on considerations such as these. It is probable, as has long been maintained, that its inclusion rested on the ascription of the work to Solomon, and on the allegorical interpretation that was given to it, and it is interesting to observe that one of the Chinese Classics, the *Shih Ching*, or *Book of the Odes*, similarly contains poems for whose preservation we are indebted to the allegorical interpretation that was given to them. Thus the ode³ :—

狂豈子褰子	狂豈子褰子惠思
童無不裳惠	童無不裳惠思
之他我涉思	之他我涉思
狂士思洧我	狂人思溱我
也	也
且	且

is rendered by Legge⁴ :—"If you, Sir, think kindly of me,

¹ *Introduction à l'Ancien Testament*, 1934, p. 140: "Cette conception (i.e. that the Song is a collection of love songs) est exclue par le seul fait que le Cantique se trouve dans le canon biblique." Yet on the following page he says "L'amour naturel, dénué de toute sensualité coupable, est le type le plus parfait de l'amour surnaturel." Why, then, should it be regarded as a thing evil in itself, and patently unworthy of a place in the Canon?

² *JTS*, xxxviii, 1937, p. 363. ³ Part i, Book vii, Ode 13.

⁴ *The Chinese Classics, with a Translation, etc.*, iv, part i, 1871, p. 140. H. A. Giles (*History of Chinese Literature*, 1923, p. 14) gives a spirited abridgment:—

"If you will love me dear, my lord,
I'll pick up my skirts and cross the ford,
But if from your heart you turn me out—
Well, you're not the only man about,
You silly, silly, silliest lout."

He comments "Native scholars are, of course, hidebound in the traditions of commentators, but European students will do well to seek the meaning of the Odes within the compass of the Odes themselves"—a comment that can equally be applied to the Song of Songs.

I will hold up my lower garments, and cross the Tsin. If you do not think of me, is there no other person (to do so) ? You foolish, foolish fellow ! If you, Sir, think kindly of me, I will hold up my lower garments, and cross the Wei. If you do not think of me, Is there no other gentleman (to do so) ? You foolish, foolish fellow ! ” To this Legge appends the comment :—“ The Preface understands the piece as the expression of the wish of the people of Ch‘ing that some great state would interfere, to settle the struggle between the marquis Hwuh (忽) and his brother Tuh (突). Hwuh succeeded to his father in 700 b.c. ; and that same year he was driven from the state by his brother Tuh. In 696, Tuh had to flee, and Hwuh recovered the earldom, but before the end of the year Tuh was again master of a strong city in Ch‘ing, which he held till Hwuh was murdered in 694. The old school holds that Tuh is ‘ the madman of all mad youths ’ in the fifth lines ; but how an interpretation of the other four lines, according to the view of the Preface, was ever thought of as the *primary* idea intended in them, I cannot well conceive.”

That allegorical interpretations are very ancient, indeed, is clear from a passage in the *Lun Yü*, or *Confucian Analects*,¹ where, however, the reference is to a poem which did not secure admission to the *Shih Ching* :—

言 商 子 素。子 純 盼 笑 子
詩 也、曰、曰、曰、兮、兮、倩 夏
已 始 起 禮 繪 何 素 兮、問
矣。可 予 後 事 謂 以 美 曰、
與 者 乎。後 也。爲 目 巧

This Legge translates² :—“ Tsze-hsia asked, saying, ‘ What is

¹ Book iii, chap. viii.

² *The Chinese Classics, with a Translation, etc.,* 2nd ed., i, 1893, p. 157. Cf. W. E. Soothill’s rendering of the Ode (*The Analects of Confucius*, 1910, p. 191) :—

“ As she artfully smiles
What dimples appear !
Her bewitching eyes
Show their colours so clear.
Ground spotless and candid
For tracery splendid ! ”

the meaning of the passage—The pretty dimples of her artful smile ! The well-defined black and white of her eye ! The plain ground for the colours ?' The Master said, ' The business of laying on the colours follows the preparation of the plain ground.' ' Ceremonies then are a subsequent thing ?' The Master said, ' It is Shang who can bring out my meaning. Now I can begin to talk about the odes with him '."

We are inevitably reminded by these fantastic interpretations of the strange explanations of the Song of Songs that have been offered, and if it is to the allegorizers that we owe the preservation of these poems, we are deeply in their debt, and gladly acknowledge that in the Providence of God their follies have served a purpose. To the Tammuz theorists, too, our debt is real for the light they have shed on some things in the Song, even though they have failed to carry conviction in their main thesis.

MISCELLANEOUS COMMUNICATIONS

ARABIC NUMERALS

In the course of preparing the *Kur'ānic* manuscripts in the Oriental Institute for publication, I came upon the same practice with regard to Arabic numerals that Rev. Mingana draws attention to in the April, 1937, issue of the *Journal of the Royal Asiatic Society*, pages 315–316, in a note entitled "Arabic Numerals". The practice consists of writing the tens before the units in the verse-count given at the head of the Surahs of the *Kur'ān*, that is, we have *ثُنُون وَعِنْ* instead of *مَا يَهُ وَعِنْوَنْ وَعِنْ*, *عِنْ وَعِنْوَنْ* instead of *مَا يَهُ وَعِنْ وَعِنْوَنْ*, and so forth for these compound numbers.

As Rev. Mingana points out, the Arabic grammarians allow for no exception to the rule which demands that in such compound numbers the units should precede the tens. Grammarians notwithstanding,¹ we find the practice fairly frequently not only in early Islamic times but at least as late as the fifteenth century of our era.

The folios reproduced by Moritz in *Arabic Palaeography* (Cairo, 1905), plates 31–6, represent either one copy of the *Kur'ān* as one would judge from Moritz's table of contents, or two very similar copies, represented by plates 31–4, 35–6, as one would infer from Grohmann's statement regarding the first group.² These, roughly dated by Moritz as of the second or third century of the Hijrah, are assigned by Stern to about the year A.H. 102/A.D. 720.³ In the elaborate Kufic Sūrah headings, which form a part of the original text, we have in plate 33 *الْأَنْعَامُ مَا يَهُ وَسَوْنَ 34*, plate 34 *الْأَنْفَالُ سَبْعَوْنَ وَسَوْتَ اِيْتَ 35*, and in plate 35 *الرَّعُدُ اِرْبَعَوْنَ وَخَمْسَ اِيْتَ 36*. In plate 42 (a),

¹ No attempt has been made to exhaust the works of the earliest grammarians. Such an effort may yet bring out the fact that this order of the numbers was permissible.

² Arnold and Grohmann, *The Islamic Book* (Paris, 1929), p. 44.

³ *Ibid.*

representing a small Kufic *Kur'ān* dated by Moritz in the third century Hijrah, we see the same practice in *القرآن مأيد* [بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ]. Further, *Arabic Palaeography*, plates 19–30, represent one *Kur'ān* dated by Moritz as of the second or third century Hijrah. Of these, plates 20, 28, and 30 together show four entries where the tens precede the units. The entries are on the margin and in a script that makes them undoubtedly later than the *Kur'ān* text itself, though how much later it is impossible to say.

These instances from *Arabic Palaeography* would lead one to expect other early instances of the practice under consideration, in any of the larger *Kur'ānic* manuscripts collection. In our modest collection of parts of seventeen parchment *Kur'āns* a number of verse counts are given, but these happen to be all round numbers and so are irrelevant to the present problem. However, of the dozen Mameluke *Kur'āns* in the Oriental Institute collection, no less than six show this practice consistently.¹ These are written on Oriental paper and in the *Thuluth* and *Naskhī* scripts, and belong in the ninth or tenth century Hijrah. Two of the six are dated²: the one belonged to the Mameluke sultan Faraj (861–815/1399–1412), and the other to the Mameluke sultan Barsbay, this latter being written in the period 837–40/1433–6. The evidence of early parchment *Kur'āns* on the one hand and of these comparatively late Mameluke *Kur'āns* on the other, would lead one to infer that the practice under consideration was continuous up to the fifteenth century of our era. Perhaps it is to be found in later times also, but I have not the materials available to help determine that.

As is well known, the North Arabic language, both spoken and written, went through a period of fundamental growth and evolution in the half millennium A.D. 300–800. The Arab, urged by his innate love of varied and alternative mode of

¹ Nos. 19, 21, 23, 25, 26, and 30 of the forthcoming catalogue of *Kur'ānic* manuscripts in the Oriental Institute.

² Nos. 19 and 21 of the forthcoming publication.

expression, could have evolved, on his own account, the two alternative methods of expressing the compound numbers under discussion. But if this was not original with him, he had every opportunity in these five hundred years to borrow it, along with many other practices, from the older cultures of both his Semitic and non-Semitic neighbours. Briefly, the practices of Mandæan, Syriac, and Hebrew show that with the numbers 11–19 the units could either precede or follow the tens.¹ With the numbers 21–99, these same peoples and also the Persians placed the tens before the units, though the Hebrews sometimes reversed the order.² There is then nothing surprising in finding the Arab, like the Hebrew, using both methods to express these compound numbers.

Furthermore, with the use of the alphabet letters for numerals the Arab, like the Syrian and the Jew, wrote the group of letters from right to left starting with the highest figure and ending with the units. These letters having in themselves no place value could easily have been written without any particular order and yet not affect the value of the number involved. The two factors which could direct a particular order would be how the Arab (after the Syrian and Hebrew) spoke his numbers and the direction in which he wrote his language. Thus when the Arab (and the Semite in general) wrote “twenty-nine” in alphabet letters as ط٣ ك٢ (ك = 20, ط = 9), he in all probability started with the ك first since his language was written from right to left; and if we are right so far, he would have no reason to start with the ط unless he was already accustomed to either writing عشرون وتسع or to speaking the number in

¹ Brockelmann, *Grundriss der vergleichenden Grammatik der Semitischen Sprachen* (Berlin, 1908), i, 489–490; ii, 214, 278. Nöldeke, *Mandäische Grammatik* (Halle, 1875), pp. 188–9. See also standard Syriac and Hebrew grammars.

² Ibid., cf. also Gesenius, *Hebrew Grammar* (Oxford, 1898), pp. 301, 455.

³ *Arabic Palæography*, plate 16, dated by Moritz, first-second century Hijrah.

that order, or more likely to both practices. Since this order of the fully written words was actually current with his neighbour, as we have already seen, why should it not have been also current with the Arab?

The alternative of supposing the early instances of this order to be an error inadvertently introduced by newly converted non-Arabs who followed the usage of their own language would not account for the fairly frequent occurrence of that order in the Mameluke *Kur'āns*, unless one is to continue supposing that these late copyists were also new non-Arab converts or that they were copying from an old codex which happened to have the "reversed" order. It is difficult to accept this series of initial error and its perpetuations. The *Kur'ān* copyist from earliest Islamic times exercised the utmost diligence and care to produce a perfect copy in every respect. He would hardly undertake to give the verse count without ascertaining the correct method of doing so. Furthermore, early parchment *Kur'āns* were practically made to order, and the prospective owner and user would examine them religiously and soon discover the error, if error it was, and eliminate it.

Taking the facts already presented and the inferences drawn from the general situation, we, I think, are safe in concluding that the practice of writing the tens before the units was a generally current alternative to the reverse order from pre-Islamic days, and that its occurrence in poetry was more of the nature of poetic expression than of poetic license. The fact that in Islamic times it occurs, so far as I know, only in *Kur'ānic* manuscripts, may place it as a ritualistic or sacred mode of expression which is conservative, and often archaic, just as is poetry, and it certainly lends force to the idea that it was at least a poetic or literary form.

NABIA ABBOTT.

UNIVERSITY OF CHICAGO,
CHICAGO, ILLINOIS.

AN OLD NAME OF THE KHOTAN COUNTRY

It has been suggested (*Asia Maior*, ii, p. 255, *Tibetan Texts and Documents*, i, pp. 12 n. 8, 31 n. 3), on the basis of statements in the Khotan chronicle and the *Gośrīga-vyākaraṇa* in their available Tibetan form, that the Khotan country, as distinguished from the capital, bore a name having the signification of the Sanskrit terms *punya*, *kuśala*, *śubha*, viz. "merit", "good", etc. The Tibetan expressions are, for the country *Dge-ba*, for the city *Dge-ba-can* "having *dge-ba*". In the Kharoṣṭī documents edited by the Abbé Boyer, Professor Rapson, M. Senart, and Mr. Noble there is frequent recurrence of the expression—

yahi khema Khotanade vartamana siyati which has been understood to mean—

"when — is happily (*khema* = *kṣemam*) back from Khotan."

But we have also—

No. 214 : *yava khemammi*.

No. 506 : *tena sadha khemammi palayita*.

No. 709 : *tade pače se Pýisa khemammi asti huda*

where certainly, as Dr. T. Burrow contends (*The Language of the Kharoṣṭī Documents . . .* 1937, p. 86), *khema* has the appearance of denoting a place of some kind and indeed of being a proper name. It is true, indeed, that in regard to Chinese Turkestan, concerning which we have from early sources so much topographical information and which is not a country suitable for an unlimited number of settlements, we ought to be careful in discovering new place-names; but, as in all questions relating to real, not laboratory, languages, we should consider all lines of evidence.

The old kingdom of Yü-mi, Chü-mi, Niñ-mi, Han-mi, the next neighbour of the Niya-Cad'ota kingdom and situated between the Chira and Keriya rivers (Sir A. Stein, *Ancient Khotan*, pp. 167, 467, *Serindia*, p. 1323), does not seem to

have a name equivalent to the *khema* of the Kharoṣṭhī texts. Otherwise, as that kingdom was absorbed by Khotan about A.D. 150, we might have been disposed to recognize it in the compound *Khema-Khotamna*. A similar consideration excludes the small hill state of Ch'ü-le, likewise absorbed by Khotan: moreover, this state did not lie on any direct route from Niya-Cad'ota to Khotan. Hence we must regard the name *Khema* as applying to Khotan itself.

Fortunately, it exactly suits our previous requirements. Popularly etymologized as = Sanskrit *kṣema*, it provides a good equivalent for the *Dge-ba* of the Tibetan texts.

In support of this conclusion we may cite two minor circumstances. The *Nordarische Lehrgedicht*, composed in the Khotan country and the Saka-Khotanī language of later centuries, names (xxiii, v. 132) the chief future cities which at the time of Maitreya's advent will represent the famous cities of the past: "the city Kuśanagara will be the city *Kṣemāvata(i)*," Leumann, loc. cit. Since Khotan certainly was to be existent at the time of Maitreya's coming (*Tibetan Texts and Documents*, vol. i, pp. 19, 221, 312), we can well understand that the Khotanī author, in choosing the name *Kṣemāvatī*, the exact equivalent of *Dge-ba-can*, was favouring his own city.

The second indication is that Taxila, which probably had many historical and linguistic connections with Khotan, included a district named *Kṣema* (Patika inscription, *Epiogr. Indica*, iv, pp. 54 sqq., Konow, *Kharoṣṭhī Inscriptions*, p. 29).

The real origin of the name *Khema*, in its application to Khotan, may still remain doubtful: and the same applies to the other old name, *Kharāṣman*, which we have found elsewhere (*Tibetan Texts and Documents*, i, p. 93 n. 7). But for its actual use in the third to fourth century A.D. we seem to have adequate evidence.

REVIEWS OF BOOKS

Near East

THE STONES OF ASSYRIA. The Surviving Remains of Assyrian Sculpture, their Recovery and their Original Position. By C. J. GADD. $11\frac{1}{2} \times 9\frac{1}{4}$, pp. xviii + 252 + 14, pls. 48, plans 2. London: Chatto and Windus, 1936. Price £3 3s.

If anyone is tempted to disparage the pioneer-work of the first archaeological explorers of Assyrian sites, this remarkable record of difficulties surmounted and of the manifold accidents by flood, disease, and vandalism which beset them, should allay his discontent. The principal English excavators have indeed told their own story—Layard with unusual vigour of description. The fate of the leading Frenchmen, Botta and Place, was very different. But some of the more important documents—notably the "First Report" of the Assyrian Exploration Fund—have disappeared, with many of the original drawings, including those of the large consignment of sculptures which was wrecked with the French rafts in the Tigris; and much even of the main outline of the story has never been published at all.

Mr. Gadd's laborious volume serves therefore two distinct purposes; to supplement the narratives of Layard, Loftus, and others, from correspondence and other original sources; and to describe systematically the sculptures from Assyrian palaces which have found their home in museums in England and abroad. This list does not claim to be complete, for there are fragments—even some of fine quality—in private collections, to which no certain source can be assigned; but it serves as an inventory, and basis for supplementary attributions, if other information be offered.

The narrative of discovery begins with the observations of C. J. Rich in 1820; though Greek and Jewish allusions

based on eyewitness are noted. It ends with the close of official excavations, enforced by the Crimean War, in 1855 ; subsequent lootings and traffickings having already been chronicled by Thompson and Hutchinson, *A Century of Exploration at Nineveh*, and in Thompson's articles in *Archæologia*, lxxix, and *Liverpool Annals*, xviii-xx. The principal events, however, lie between 1845 and 1851, and centre round the work of Layard. Of Rawlinson, one gets the impression that already his main interest was in the cuneiform texts, and that the transport of colossal bulls and lions was for him an unavoidable incident of discovery, like the adjustment of claims, and excesses of zeal, among field workers, and the "necessities of the service" which restricted the help of the Bombay Government and the Royal Navy ; for the joyous collaboration of vice-consuls and "gun-brigs" in archæological research belongs to the Newtonian era, after the Crimean War. Moreover, as Lord Salisbury put it in another context, "the fleet cannot go up the Euphrates." All the more credit, therefore, goes to Captain Felix Jones, who, when a colossal lion and other rarities (which had already been drowned once by flood up country) had been washed through the broken bank of the Tigris into Mesopotamia, "boldly put his steamer through the gap," transhipped them to a native boat, and "in spite of a five-knot current" set them back on their course to Basrah. The friendly assistance, indeed, of merchants, and their agents in the Gulf, and of publishers, art dealers, and the Crystal Palace Company at home, is characteristic of the British way of handling these emergencies. Characteristic, however, also is the official parsimony which resulted in the sale of the Crystal Palace collection to Berlin, and very nearly in the acceptance of a Prussian subsidy by the Assyrian Exploration Fund itself.

The fine plates of this volume are in great part from unpublished drawings ; and Plate 31 where drawing and photographs of the same slab are confronted, shows what

remarkable skill was attained by those early draughtsmen, all quite untrained in archaeology, and all left to their own devices, apparently, when they returned home more or less disabled by their experiences. It is not quite clear on what principle these examples have been selected, nor why they are distributed at large through the text of both parts of the book. The brief titles attached to them must be supplemented from the descriptive inventory.

In a very difficult and unusual task, Mr. Gadd is to be congratulated without reserve on his success.

J. L. MYRES.

THE ROYAL ARCHIVES OF EGYPT AND THE ORIGINS OF THE
EGYPTIAN EXPEDITION TO SYRIA, 1831-1841. By
ASAD J. RUSTUM. Publications of the Faculty of Arts
and Sciences : Oriental Series, No. 8. 10 × 6½, pp. 116,
pls. 7. Beirut : American University of Beirut, 1936.

Why did Mohammad Ali invade Syria ? He proclaimed that his purpose was to reform the Turkish state. To those who have read the earlier history of Islam, this is only the summons to "the book of God and the custom of the prophet" in a modern dress, perhaps adapted purposely to European consumption. The reader gets the impression that Mohammad Ali was fighting for his life, in other words, his possession of Egypt, and from this again followed many things which could be exploited as motives. For the most part, this pamphlet is an expansion of a few pages of Professor Dodwell's book, adapted to beginners. The pamphlet is not very well put together. What is new is the faint beginning of nationalism as shown in some utterances of Ibrahim, something like Arabia for the Arabs. But if Ibrahim was serious, he was far ahead of his time. He himself admits that he could not rely on the Syrians and his father tried to hide his projects from the Egyptians. During the siege of Acre, the Egyptians were forbidden to mention the names

Acre and Syria. A shopkeeper, who had difficulty in opening the door of his booth, lost his temper and said, "Do you think you are the walls of Acre?" He was taken off by the police, apparently never to return. A nationalism, which was confined to the leader and distrusted the people, is a curiosity rather than a historical portent.

A. S. TRITTON.

REALLEXIKON DER ASSYRIOLOGIE, Vol. II, Part 4. By E. EBELING. 10 × 7, pp. 80. Berlin : Walter de Gruyter, 1936. Mks. 6.

The second volume of this encyclopædia, the first three parts of which were reviewed by Weir in *JRAS.*, 1936, p. 300 f., is now brought to p. 320, but is still not complete. The present part contains notices of a large number of places compounded with Dûr- and of temples compounded with E-, and many more of the latter are left over for the following part. Consequently the number of longer articles is smaller than usual; but the following may be mentioned:—geographical: *Dûr-Kurigalzu* and *Dûr-Šarruukîn* (Unger), *Eanna* (Ebeling), *Edom* (Jirku), and *Ekallâte* (Unger); general: *Edelsteine* (Boson), *Ehe* (Ebeling and Korošec), *Ehebruch*, *Ehrverletzung*, and *Eid* (San Nicolò), and *Eisen* (Schachermeyr). Also at the end of letter D (p. 256) Ebeling has republished the new dates for the dynasty of Isin given by Stephens in *R.A.*, xxxiii (not xxxii as printed), as a supplement to his article "Datenlisten".

Boson's article on the precious stones is already largely out of date, since the publication of Thompson's *Dictionary of Assyrian Chemistry and Geology*, the conclusions of which, based as they are on a consideration of factors such as the Sumerian names of the stones, their use as medicines, and their position in the lists, combined with a wide knowledge of chemistry, will probably be more readily accepted than

those of Boson, who relies almost solely on etymological combinations of the Accadian name with similar words in other Semitic languages.

It is unfortunate that Jirku has omitted to mention the Ras Shamra tablets in his article on Edom, for the king of Edom plays a considerable part in the legend of Keret.

The name Dûr-ubla, for which Ebeling gives one reference, not only occurs in this form in several other passages in the Nuzi texts, but is also identified by Meek with Dûr-ibla, which has not been entered in the *Reallexikon*: see Meek, *HSS.*, x, p. xviii (n. 42) and *RA.*, xxxiv, p. 65.

It may also be worth adding that a land written *Du-û-ra* appears among the districts of Assuwa in Western Anatolia conquered by Tudhaliya IV. But since this has been plausibly identified by Forrer with the classical Tyrrha it should probably be booked as Tûra.

In general, however, the articles are of course reliable and—especially those of San Nicolò—interesting, and we cannot but hope with Mr. Weir that the work may be completed as speedily as possible.

A. 829.

O. R. GURNEY.

LES DÉCOUVERTES DE RAS SHAMRA (UGARIT) ET L'ANCIEN TESTAMENT. By RENÉ DUSSAUD. 10 × 7½, pp. 129, figs. 23. Paris : Paul Geuthner, 1937. Frs. 30.

The work contains an account of the site, the excavations, the art, and the newly discovered cuneiform alphabet; a chapter on the primitive habitat of the Phœnicians (neighbourhood of the Red Sea and Palestine); and studies of the mythological and semi-historical Phœnician texts of Ras Shamra and of their relations with the Old Testament. There is no one who has written more interestingly on this subject than M. Dussaud. Its importance is unquestionable. The book ends with the words: "Il n'est pas exagéré d'avancer que la découverte des tablettes de Ras Shamra est la plus

importante qui ait jamais été faite dans la domaine des études bibliques."

Observations on points of detail. P. 53: termination *m* in the plur. constr. regarded as a merely *graphic* indication that the word is plural. It is simpler to recognize a dialectic peculiarity. Cf. *-ānī* for abs. and const. plur. in Babylonian. P. 70, n. 4: *Mt = le héros, guerrier*, not *la mort*, but note *Mt* antithetic to *ḥy*, living, in 1 AB, III-IV, 1-2. P. 81: *Shalem*, Peace, god of Evening, in antithesis to *Shahar*, Dawn (in relation to the couple Evening and Morning Star), cf. the interpretation of *Pax* in the Carvoran inscription, *JRAS.*, 1927, 319. P. 81: in the poem NK, Nikal, a god according to Viroilleaud but a goddess according to Dussaud. I am not convinced by the correction. The crucial lines 30b-32 could mean: "Yrh the illuminator of the heavens answered: and replied 'With us is Nikal my father-in-law'" (*n'n* perhaps *niph'äl*). P. 86: *gZR* = Heb. 'zr. But Heb. *z* = Aram. *d* = Ras Shamra *d*. P. 90, n. 1: '*un* seems to be title of Baal (Ginsberg, *Orient.*, 1936, 167). This may explain Heb. *Beth-'wn*. P. 103: K 121 compared to Num. 22, 28 (Balaam's ass). Since "dog of *spr*" in the next clause is parallel to "his (Pabilmelek's) ass", *Spr* may be a proper name, in which case cf. *Spr* in Num. xxii. The possibility of other connections between *Keret* and the same chapter of *Numbers* may need consideration: K 126-7 in Dussaud's translation (take silver and gold from the hand of his lieutenant) and Num. xxii, 7; K 142 and Num. xxii, 18; K 130 and Num. xxii, 40. P. 111: *tu te laveras et tu deviendras rouge* (*t'adm.* K 62), taken to mean that the colour of the skin will appear. More probably the hero paints himself red (*t'adm*, *Piel*); cf. *Danel* 204, where the same phrase is followed by "thou shalt become red (*t'edm*, *Qal*) by the . . . of the sea (?).

A. 846.

E. BURROWS.

JOHANNES VON LYKOPOLIS : EIN DIALOG ÜBER DIE SEELE
UND DIE AFFEKTE DES MENSCHEN. Herausgegeben von
SVEN DEDERING. Uppsala : Almquist and Wiksells
Bocktryckeri-A.-B., 1936.

This is a Syriac translation from the Greek of an author of the latter part of the fourth century A.D., and is published as a contribution to the study of Christian mysticism. The text is based on six MSS. in the British Museum, and the editor has prefixed an introduction, with analysis of the contexts. The editing is exceedingly careful, and few difficulties confront the reader who is familiar with the language : yet, as Syriac scholars are by no means numerous, the utility of the edition would have been greatly increased by a translation into Latin or German, the language of the Introduction. The Dialogue is ostensibly the record by one Eutropius of questions addressed by him and one Eusebius to "the Monk", who replied to them, sometimes at considerable length : on one occasion an outsider criticizes one of the statements, and on several the questioners express their admiration of the replies. In the last of the four sections they ask for definitions of a vast numbers of terms, of which the Greek original is not always obvious, and the necessary information is provided. Many are said to have three different senses, Somatic, Psychic, and Pneumatic, and indeed the main object of the treatise would seem to be to distinguish between "soul" and "spirit". The functions of the latter are often postponed to the future life.

The editor supposes the dialogue to be historical, a matter about which opinions may differ : readers are likely to agree that the monk addresses the uninitiated, as the matter is rather ethical and homiletic than mystical. Only Biblical writers seem to be quoted, and of these the most frequently cited is St. Paul.

A. 820.

D. S. MARGOLIOUTH.

THE SYRIAN DESERT: CARAVANS, TRAVEL, AND EXPLORATION. By CHRISTINA PHELPS GRANT. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 410, pls. 16, maps 4. London : A. and C. Black, 1937. 18s.

Dr. Christina Grant is to be congratulated on the originality of her subject, to which there is something analogous, though not closely so, in Mr. E. W. Bovill's *Caravans of the Old Sahara*. Her work is a history of the overland routes used by travellers from Europe to the Near, the Middle, and the Far East from ancient times to the present day, and embodies much material taken from books of travel and exploration belonging to many centuries. Besides its value for geography and history it abounds in interesting statistics of the time taken by large and small caravans and persons travelling alone, of the size of the two former, and their organization, and the expense incurred. Further we learn what political and economic considerations caused different routes to be favoured at times, what risks were incurred, and how those risks were avoided or minimized. Authoritative information is given about the Muslim pilgrimage, and a detailed history of the post in the time of the Caliphate and under the Ottoman empire, with special attention to its use for the maintenance of communication between this country and its Indian possessions. Maps and photographs, some of them original, add to the attractiveness of the book.

Where so much is given one hesitates to cavil, but I find some of the statements surprising. p. 219 : "The Mosque at Mecca contains the Ka'aba or 'Black Stone'." (I need not comment on this.) p. 236 : "Most Arabic writers agree that *veredus* is the root of the word *berid*." I wish some of them had been named : for the author of *al-Fakhri* who gives several etymologies of the word does not know of this. p. 234 : "In Moslem theology the word *Hajj* means 'aspiration'" ; does it ? p. 238 : "After the eleventh century the Zengid Caliphs alone gave their consistent support to the postal services" ; these Caliphs seem to have escaped Dr. Lane Poole, though he knows of Zangids. p. 239 : "Three

years after the last Abbasid Caliph took refuge with the Sultan of Egypt": if the reference is to the last Abbasid Caliph of Baghdad, he did not do this, being put to death by the Mongols; if it is to Mustansir, he was not the last Abbasid Caliph, but the first of those who held the title in Cairo. There are some other statements about which the reader is likely to be in Qur'anic phrase "in distressing doubt".

A. 864.

D. S. MARGOLIOUTH.

THE UNVEILING OF ARABIA. *The Story of Arabian Travel and Discovery.* By R. H. KIERNAN. $8 \times 5\frac{1}{2}$, pp. 360, ills. 31, maps 13. London: G. G. Harrap, 1937. 12s. 6d.

Since the appearance of Hogarth's *Penetration of Arabia* in 1904 much new light has been shed on that obscure peninsula, and Mr. Kiernan has done a service which should be widely appreciated in summarizing the work of its explorers from early times till the most recent. His book is rendered both interesting and attractive by its method, which is to furnish some biographical details about the explorers, and to let them occasionally speak for themselves. It is a record of courage, endurance, and sagacity displayed by travellers of many nationalities. Some of their names are familiar; we miss several, the most serious omission being probably that of the Arabic geographer and archæologist Hamdani, whose description of the peninsula supplies the editor of *Anbā' al-zaman fi akhbār al-Yaman* with some information about most of the places and tribes mentioned. The very few lines devoted to Glaser seem inadequate recognition of the service rendered by the most successful investigator of South Arabia. There is no mention of Jaussen et Savignac, whose *Mission Archéologique* (1909-1922) is of great importance for the sites in North-West Arabia. Nor is there any of B. Moritz, whose contribution to the geography of the western side is by no means negligible. A map of the country, embodying all ascertained results, would have been very desirable.

A. 882.

D. S. MARGOLIOUTH.

Far East

CAMBODIAN GLORY. By H. W. PONDER. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. 316, ills. 18 (one missing), maps and plans, 4, with index. London: Thornton Butterworth, Ltd., 1936. 15s.

Although the author has treated her subject seriously and gives a considerable bibliography of relative authorities consulted, she makes no claim that her work is of archæological value. Her object has been to present to the public, in popular style, a connected narrative of the glories of ancient Khmer (Cambodian) art based on the latest archæological research, and as such, even if it does not call for an extensive review in these pages, this volume deserves a warm welcome among all those who wish to see this phase of Eastern art properly appreciated.

It is only within recent years that the fame of that masterpiece of architectural art, Angkor Wat, has reached England, and it will probably still be many years before it takes its rightful place as, acceptedly, the most wonderful monument ever erected by the hand of man. But Angkor Wat is only the crowning glory of six or seven centuries of continuous building by the Khmer, and when it is stated that the "École Française d'Extrême Orient" has now scheduled more than a thousand monuments of Khmer architecture, some idea may be gained of the vastness of their achievement.

It is a great pleasure to the writer to feel that the author has drunk in the beauties of Khmer art to the full. Her narrative consists of descriptions, partly of her travels to Angkor and of what she saw on the way, particularly of the modern Cambodian's arts and crafts at Phnompenh, the capital of Cambodia, and partly of Angkor itself and its history. The travel part is brightly told and eminently readable, while the historical part shows that she has studied her sources well and digested them. Certain statements might give room for criticism, but as the work does not pretend to be an archæological one, it is not proposed to discuss it in detail.

It is good to note that the author has realized that the fall of Angkor and its decay is no longer a mystery, but was due to Siamese invasions; and if she wishes to pursue her inquiries further the writer would recommend a study of Siamese history and art for a fuller comprehension of the whole subject.

A certain number of errors occur in the printing, such as "sumptuous" for "sumptuous" (p. 57), and "dieties" for "deities" (p. 62), and "woman" for "women" (p. 69), which it would be well to correct in any future edition. Also, technical Indian terms might be studied more carefully. "Sivism" is usually written "Saivism", and "Apsaras" is not a plural form, but a singular.

These, however, are very small blemishes in a volume which has given great pleasure to the writer to read, and which can be heartily recommended as an introduction to the study of one of the glories of the world in the field of architecture and art.

The writer may note, in passing, that it was not until p. 207 that he became fully aware that the author was a woman.

R. LE MAY.

IBAN OR SEA DAYAK FABRICS AND THEIR PATTERNS. By ALFRED C. HADDON and LAURA E. START. 10 x 7½, pp. xv + 157, pls. i + xxxv, ills. 32. Cambridge: University Press, 1936. 25s.

The Sea Dayaks or Iban are an important section of the population of Sarawak, where the garments described in this work, and now in the Museum of Archaeology and Ethnology at Cambridge, were collected. The materials used are bark cloth and cotton cloth, the former being the cheaper and the latter the more important from the point of view of this work. A description of the Iban cotton gin, spinning-wheel, and loom, and an account of the methods of producing patterns and dyes, precede the main portion of the book, in which jackets,

petticoats, loincloths, women's girdles, shawls, and blankets are described in detail from the numbered specimens in the museum. This is followed by an analysis of the patterns, which are usually highly conventionalized forms of animals, plants, utensils, etc., and some general considerations on the origins of Iban art and its relation with their religion.

Though inevitably mainly technical, the work includes a good deal of information about Iban customs and folklore, a vocabulary of relevant words and a bibliography. Nearly half the Iban words in the vocabulary are identical, or nearly so, with Malay, but not necessarily Malay loan-words. It is noticeable that the Iban technique in weaving is very distinctive and differs from that of the Malays and most other Indonesians. The numerous illustrations and plates are very good, and many of the patterns illustrated are extremely elaborate.

C. O. BLAGDEN.

SUVARNADVIPA, ANCIENT INDIAN COLONIES IN THE FAR EAST. Vol. II, Part I, Political History. By R. C. MAJUMDAR. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. xviii + 452, maps 2. Dacca : A. K. Majumdar, 1937.

In this volume, which forms the first part of the second volume of *Ancient Indian Colonies in the Far East*, Dr. Majumdar deals in a comprehensive manner with the political history and system of administration in the days of Hindu colonization in Malaysia, as well as with certain connected topographical questions. The reasons for using the name Suvarnadvipa for the whole area including the Malay peninsula proper and the neighbouring islands of the archipelago—a general name corresponding with the “Island of Chryse” of P. Mela, Pliny, and others and of the *Periplus*, and the “Chryse Chersonesos” of Ptolemy—have been fully explained (pp. 37–64). The work is divided into four sections, or “books”, each subdivided into appropriate

chapters. In Book I, on "the Dawn of Hindu Colonization", after a short account of the lands and peoples and pre-Hindu civilization, we are told what is so far known of the earliest Hindu colonization down to the end of the seventh century. On pp. 19–24 grounds are set forth in support of a presumption that the "Mālava-Mālaya tribe" of India may be regarded as the parent stock of the Malays, a presumption that presents difficulties. Book II deals with the history of the Śailendra Empire, the original seat of which and its connection with the kingdom of Śrī-Vijaya have been subjects of so much controversy. In the Appendix to this section Dr. Majumdar gives his reasons for holding that the kingdom of Zabaj (with its various spellings and confusing transliterations) of the Arab writers had its headquarters in the Malay peninsula, and corresponded to the *San-fo-tsi* of the Chinese texts, and that it must be distinguished from Sribuza (Śrī-Vijaya), the equation of which latter with Palembang he seems prepared to accept. Book III treats of "the Rise and Fall of the Indo-Javanese Empire", and Book IV of the "Downfall of Hindu Kingdoms in Suvarṇadvīpa".

From the nature of the data as yet available to us many of the identifications of names found in the Arab and Chinese texts and the local inscriptions must necessarily be conjectural, and so also must be several of the conclusions in respect of the course of historical events; and the reader is carefully and explicitly cautioned of this. Dr. Majumdar shows himself to be familiar with all the literature, largely in Dutch and French, relevant to the subject of his study, and he has dealt with the evidence in a thoroughly judicial and scholarly manner. This volume must be regarded as a valuable contribution towards a correct understanding of the very important roles played by Indian colonists in the history of the archipelago. The appearance of the second part will be widely welcomed.

A SURVEY OF INDONESIAN CIVILIZATION. By RAYMOND KENNEDY. $8\frac{3}{4} \times 6$, pp. 31. New Haven, Connecticut, U.S.A.: Yale University Press, 1937.

This article is a reprint from *Studies in the Science of Society*, which was presented to A. G. Keller on his completion of thirty years as Professor of the Science of Society in Yale University. It contains in compact form a very useful account of the various subjects suggested by its title, comprising such matters as race, religion, economics, social structure, and a number of others, besides a sketch map and a statistic table of the population of Indonesia, excluding the Philippines and New Guinea.

Middle East

HUDŪD AL-ĀLAM. "The Regions of the World": a Persian Geography: A.D. 372/A.D. 982. Translated and explained by V. MINORSKY with the Preface by V. V. BARTHOLD (1930) translated from the Russian. $10 \times 6\frac{1}{2}$, pp. xx + 524, maps 12. E. J. W. Gibb Memorial, New Series XI. Oxford, 1937. London : Luzac & Co. 25s.

The Persian text of the *Hudūd al-Ālam* was published by Barthold in 1930 in a facsimile of what appears to be a unique manuscript. The work is brief but closely packed with information and, in view of its early date, is particularly interesting in the sections which deal with the lands outside the bloc of countries forming the heart of the Islamic world. It is to these sections that Professor Minorsky has devoted himself in his commentary, thereby avoiding duplication of the work of Le Strange, Paul Schwarz, and others, and with encyclopædic knowledge and learning he has provided the most complete source of information yet available about topography and tribal distribution in Central Asia in the earlier centuries of Islam. A series of well-drawn sketch maps

illustrates the work. The fact that there has been only one manuscript to work from has made the task a difficult one, especially since the copyist has, in not unfamiliar fashion, treated as unimportant any name not easily recognized and set it down with scant regard to accuracy. That Professor Minorsky has, nevertheless, succeeded so well is sufficient tribute to the range of his knowledge and the width of his researches.

In the translation, the desire to be as literal as possible has led in places to obscurity and there may be certain differences of opinion with regard to the terms chosen as equivalents. Here are some examples chosen at random :—

p. 49, *gushāyanda-yi kār-hā* translated “Opener of difficulties” (for ? “Initiator of all things, processes”); *paydā kardīm*, trans. “we have brought to light” (for ? “we have set out, elucidated”); *ni‘mat* trans. “amenities” (for ? “prosperity, riches”); *yādhkird* trans. “memories” (for ? “memorials, memoirs, notices”).

p. 59, *āb-i buzurg* trans. “a large water” (for ? “a great, important, river”).

p. 60, *aşlı* trans. “real” mountains (for ? the “main” range).

p. 82, *pādshā-i-hā* trans. “kingdoms” (for ? “dynasties, royal families”).

p. 91, *musalmānī numāyadh* trans. “makes show of Islam” (for ? “professes Islam”).

p. 106, *mulūk-i atrāf* trans. “margraves” (for ? “border chiefs”); *siyāsat* trans. “policy” (for ? “rulership”).

(On p. viii the transliteration of the colophon of the *Jāmi‘ al-Ulūm* ought to be revised.)

But these are minor blemishes in a work which is likely for long to remain a standard book of reference and which will bring enhancement to its author’s reputation as a geographer and historian.

India

EARLY SĀMKHYA. An Essay on its Historical Development according to the Texts. By E. H. JOHNSTON. R.A.S. Prize Publication Fund Vol. XV. $8\frac{3}{4} \times 5\frac{3}{4}$, pp. vii + 91. London : Royal Asiatic Society, 1937. 5s.

In connection with the Sāṃkhya representation in Aśvaghoṣa's *Buddhacarita*, for the excellent new edition and translation of which we have to be thankful to the author,¹ the latter felt the necessity "to ascertain the principles common to all forms of early Sāṃkhya". That Aśvaghoṣa's Sāṃkhya is nearer to certain *samvādas* of the Mokṣadharma than to the *kārikās* of Iśvarakṛṣṇa had already been observed, but it is only to the sound and thorough-going methods of our author that valuable new results have come to light.

I want to emphasize the most important one among them as space prevents me from dealing with more. In the introduction to his translation of the first part of the *Buddhacarita*, p. lvii, our author asks : "Why does canto XII of the *Buddhacarita* make no mention of the *gunas* ?" and he answers the question by determining new shades of meaning for the concepts *avyakta* and *guna*. In section 3 of the present essay he has elaborated this answer by adducing facts from parallel sources and putting it in line with the general development of preclassical Sāṃkhya. *Avyakta* is here not yet a synonym of *prakṛti*, the latter term still denoting (also in the singular) the eight creative factors and not yet the first *tattva* alone, but the term means here "the embodiment of the law of *karman*, the unseen moral force which regulates the fate of every being, and it is named the 'unmanifested' in a double sense, in that its working cannot be detected by the senses and that it sums up the potentiality of the acts, whose effects will manifest themselves in the future", and with the *avyakta* are associated the three *gunas*.

¹ Panjab University Oriental Publications, Nos. 31 and 32, 1935-6, and Acta Orientalia, xv.

as determining the moral state of the individual, while the fact of their being the constituents of the first *tattva* as well as their mutual interaction and inseparability are still unknown at this step. This interpretation is shown to suit a number of passages of the older strata of epic philosophy too, and if tested in every passage concerned it will throw light on a good deal of the history of Sāṃkhya thought.

The same can be said of the other problems which are dealt with under "Life and Soul" in section 4, and in section 5 under *svabhāva*, *aksara* (altogether different from Modi's dissertation on this subject) and the relation between the soul and the physical principles.

On the whole, though not offering easy reading, which is natural in the face of the complicated and fragmentary material, the essay must be valued as a stimulating and trustworthy contribution to our knowledge of early Sāṃkhya thought.¹

A. 910.

OTTO STRAUSS.

NANDIKEŚVARA'S ABHINAYA-DARPAÑAM; critically edited with introduction, translation, etc., by MANOMOHAN GHOSH. Calcutta Sanskrit Series, No. 5. $9\frac{3}{4} \times 6\frac{1}{2}$, pp. lxxii + 66 + 55, pls. 5. Calcutta : Metropolitan Printing and Publishing House, 1934. 10s.

Abhinaya, the presentation or performance of song and dance and drama, covered in ancient times the whole technique of these arts, as well as a good deal of what we call interpretation. Nandikevśara's work deals only with the dancer's art—gesture, posture and gait—and the greater part of it was translated by A. K. Coomaraswamy and G. K. Duggirala under the title of *The Mirror of Gesture* (Cambridge, Mass., 1917); but this is the first full and critical edition, made from two complete MSS. and fragments of three others, and will be welcomed by students of Indian drama, painting, and

¹ For a preliminary study of Śvetāśvatara, cf. *JRAS.*, 1930, pp. 855 ff.

sculpture as well as of dancing. The text and translation are excellently printed. Mr. Ghosh has added a useful introduction containing a summary of the ancient literature on the subject and a detailed comparison with the relevant passages of the *Bhāratīya-Nātya-Śāstra*; variant readings; notes on the subject-matter; an index of technical terms; and four drawings from classical paintings and sculpture. More and better illustrations would have been welcome, e.g. photographs of dancers in some of the attitudes described.

C. A. RYLANDS.

PĀṇINI AND THE VEDA (STUDIES IN THE EARLY HISTORY OF LINGUISTIC SCIENCE IN INDIA). By PAUL THIEME.
9½ × 6½, pp. xv + 132. Allahabad : Globe Press, 1935.

This treatise is the English translation of a manuscript in German which, in 1932, secured for its author the *venia legendi* in Sanskrit Philology of the University of Göttingen. On the whole it may be said that Thieme in his method of research follows the lines laid down by his teacher, E. Sieg.

In his introduction the author clearly defines his standpoint. "In its childhood, science plays with insoluble problems," while "in its manhood" it "grows matter of fact" (p. ix). Thus he rejects as unimportant Kātyāyana's logical systematizing of Pāṇini (p. xi), although, from the Indian point of view, grammar (philology) is generally understood to form a philosophical discipline. In his philological interpretation, however, the writer closely follows Kātyāyana (p. 118).

Thieme approaches his text in the critical attitude of a philological historian. He considers it his task to go, if necessary, even beyond Pāṇini himself as regards the accuracy of the latter's Vedic expression (p. xiv); he doubts the correctness, on various points, of the later Indian grammarians, and repeatedly criticizes the results obtained by other Western scholars in the field of Indian grammatical research.

By his purely philological method of single observation (p. xiv), Thieme arrives at conclusions as to the nature of the

Vedic sources that "might have furnished Pāṇini" with certain of his statements (p. 22). He denies that Pāṇini has used the White Yajur Veda text (p. 76), but claims that the latter must have availed himself of more Black Yajur Veda texts than have actually been handed down to us (p. 64). From these investigations the author proceeds to draw conclusions as to the "geographical home (in the north, p. 76) of Pāṇini's language".

With regard to the question of the fixing of a definite period for the life of Pāṇini, Thieme does not go beyond the familiar results indirectly derived from the chronological order of the texts involved.

BETTY HEIMANN.

THE PHILOSOPHY OF THE UPANISHADS. By S. C. CHAKRAVARTI.

$9\frac{3}{4} \times 6\frac{3}{4}$, pp. xv + 274. Calcutta : University of Calcutta, 1935.

The author's method of approaching his subject-matter is certainly new. Written by a logically-minded lawyer, this book forms in every sense a counterpart to the usual manner of dealing with the Upaniṣads, a manner which, at the expense of rational deduction, is inclined to dwell with preference on their irrational (mystical) aspect.¹ Although, as the reviewer herself has attempted to show, the cosmic-psychological comparisons and identifications of the Upaniṣads may, for the most part, be explained rationally, Ch.'s own way of divesting them of their mystical and religious note, as well as freeing them from the overshadowing systems of commentators,² has resulted in a soberly written survey of Upaniṣadic thought, which, perhaps, tends too much towards the other extreme. The irrational in the Upaniṣads

¹ Cf. *Studien zur Eigenart indischen Denkens*, Tübingen, 1930, pp. 52 ff., esp. p. 52, ann. 2.

² e.g. Śaṅkara, Rāmānuja, Madhva. In the same way he rejects the interpretations of Western scholars (Schopenhauer, Deussen), who utilize Vedāntic ideas for the sake of supporting their own systems.

he sacrifices for what he terms "objective truth", that is, "what is true not only as the spontaneous intuitive experience of an individual, but what may be re-experienced and checked scientifically by everyone".

Science, according to the author, is the base of all disciplines of thought. The scientific canon of truth he applies equally to philosophy, the special task of which is to unite scientific facts, while religion is but an irrational offspring of philosophical comprehension.

Evolved from this premise, Mr. Ch.'s statements will sometimes appear a little daring. Thus, e.g., he speaks of Yoga as supplying "a powerful machine" of thought (p. 71). His contention is that if this mechanical means, "a high-power telescope" (p. 69), had been applied in the West by men like Newton, Marconi, Edison, and Einstein, their achievements would have been far more remarkable (p. 73).

From his rationalistic point of view the author is inclined to underrate not only the importance of individual inspiration, but also that of the subconscious, e.g. climatic, influences on thought, and, p. 129, goes so far as to suggest that the efficacy of Yoga would be greater if India, geographically, were situated somewhere in Europe. In this case it would, of course, be neither Indian nor indeed Yoga.

A further consequence of the author's fundamental outlook on a philosophy derived from the empirical facts of science is his detailed refutation of Śaṅkara's doctrine of the irreality of the World. Curiously enough, Ch.'s views on this point agree with the ideas proclaimed by those who believe in the subconscious efficacy of the powerful geographical conditions of India, under which Māyā as an "illusion" cannot but be a passing concept.

A logical empiricist, Mr. Chakravarti concludes his book with a summary of the Upaniṣadic doctrines as being valid not for the particular period of the Upaniṣads only, nor solely for the special trend of Indian thought, but for all times and civilizations generally. The chief practical result which

Ch. obtains from the speculations of the *Upanisads*, usually considered world-remote, is that both God and Law are not imposed upon Man from outside, but are his own free and active will, his Ātman. No mysticism attaches, in the author's view, to this practical philosophy of the Ātman doctrine (p. 262 ff.), which he regards as the purest expression of "that self-confidence which is an essential element in human progress" (?).

A. 560.

BETTY HEIMANN.

VINAYAPITAKA, Part I. Translated into Hindi by RĀHULA SĀMKRTYĀYANA. 11 × 7, pp. 32 + 578. Mahābodhi Sabhā of Benares : Allahabad, 1935.

To European scholars this Hindi version of the *Vinaya*, covering in the present volume the *Vibhaṅga*, the *Mahāvagga*, and the *Cullavagga*, will be mainly of interest as proving the increasing attention that is being devoted to Buddhist studies in India. So far as I can see, the translation is sound, and those who have more right to speak on the subject than I can claim have approved its style; but Buddhist scholars will find that it does not contain much which they did not know already, and the facility with which Pāli words can be taken over by Hindi prevents the rendering from being of substantial assistance in the understanding of technical terms.

A. 640.

E. H. JOHNSTON.

AURANGZEB AND HIS TIMES. By ZAHIRUDDIN FARUKI. 8½ × 5¼, pp. xv + 596. Bombay : D. B. Taraporevala Sons and Co., 1935. Rs. 8.8.

This book is marked by enthusiasm for Aurangzib and an unwillingness to admit the criticisms usually accepted. The author sets out to prove that the *jizya* was not a tax on heresy, that, excepting temples which were demolished during a rising, only new temples which had been built in defiance of the known prohibitions were destroyed, that Hindus were not dismissed from employment, and that there was no forcible

conversion. Many statements in Sir Jadunath Sarkar's *History of Aurangzib* are contradicted, such as the suggestion that Aurangzib instigated the complaint, as a result of which Murād Bakhsh was executed, that he was lax in performing the obsequies of his father, and that he tried to make the young Ajit Singh of Jodhpur a Muslim. It follows that Shivājī is severely criticized.

Not all of these strictures carry conviction. The author has read widely and quotes his authorities freely, but his conclusions are based on a selection of those which favour his views rather than on a judicial discrimination.

In addition to the annals of Aurangzib's reign there are chapters on Hindu and Muslim polity, provincial administration, land revenue, and economics, which on the whole are not very useful. That on polity is swelled by a long account of Islamic theory, much of which is irrelevant. There is, however, an excellent chapter on Shias in India, and their influence on the history of the Deccan, and the remarks on literature and art are useful, while the short summary of reasons for the decline of Mughul power is excellent.

The author uses a clear good style of English. He has read his proofs carefully, and the book is well printed, but unfortunately has no index. At p. 5 Dāwar Bakhsh should be described as a nephew, not a brother of Shāh Jahān, and at p. 539 Sinsānī, which lies in the present Bharatpur State, has been confused with Sāsnī, a village in the 'Aligarh district.

A. 659.

R. BURN.

ECONOMIC CONDITIONS IN SOUTHERN INDIA (A.D. 1000-1500).

By A. APPADORAI. Madras University Historical Series, No. 12. $10\frac{3}{4} \times 6\frac{3}{4}$, pp. xii + 892, in two volumes. Madras : University of Madras, 1936.

Dr. Appadorai is not out to rewrite medieval history in the jargon of modern economics. He sticks to his evidence, mainly epigraphic, with excellent results. Scholars would do

well to emulate the shrewdness with which he handles the slippery subject of "caste", although (perhaps because) he cites no books about it. He is not a numismatist, but his remarks on currency are illuminating. No settlement officer will cavil at his treatment of land tenures and revenue, though he quotes no settlement reports, and he proves, without saying so, how deep lie the foundations on which the Madras revenue system is built. At the outset (p. 36) he stresses precision in relating each item of evidence to its historical and geographical setting, and he is scrupulous to note the date and provenance of every inscription cited. That little change is discernible in the five centuries of somewhat hectic history covered by this survey is due, no doubt, to the stability of South Indian institutions, and between one area and another the differences are slight. The book, though sometimes redundant, is carefully planned, reviewing in turn rural and urban life, industry and foreign trade, and the role of the State, and includes some informing sections on the temple and the guild as economic factors. The curt closing chapter on "The Standard of Life" is presumably a sop to modernism; luckily, when evidence is lacking, Dr. Appadorai is not afraid to say so. Misprints are few, but there is no need for diacriticals in the Portuguese derivative "*picotta*"!

A. 664.

F. J. RICHARDS.

A HISTORY OF THE QARAUNAH TURKS IN INDIA (based on original sources). By ISHWARI PRASAD. Vol. I. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. ix + 379, pl. 1, maps 3. Allahabad : The Indian Press, 1936.

This should be regarded as an exceptionally valuable contribution to the history of Muslim India. It is a "Life and Times" of Muhammad Tughluq, collected from both contemporary and later narratives, some printed, others in

MS., which the writer has collated, correcting or confirming their statements from evidence furnished by coins, inscriptions, and notices in both Indian and European works. The central figure is pathetic rather than heroic. Dr. Prasad is unable to acquit him of the charge of parricide, though describing him as "a man of unblemished character" (p. 104), but does his best to clear him of other accusations, such as insanity, wanton massacres, Muhammadan unorthodoxy, and cruelty. He regards the ill fame which this potentate acquired as mainly due to the bigotry of Muslim fanatics whom Muhammad Tughluq offended by rejecting their guidance, curtailing their privileges, extending toleration to his Hindu subjects, and unduly favouring foreigners. He certainly possessed some strategic ability, but is shown to have been a complete failure as a statesman. He appears to have been guided by the Arabic jingle according to which "if a sovereign is not munificent (*dhāhibah*), his sovereignty comes to an end (*dhāhibah*)", squandered his revenue, and by resorting to excessive taxation helped on the ruin of his empire, for the collapse of which there were other contributory causes which Dr. Prasad enucleates with skill. His eagerness to recognize the suzerainty of the shadowy Egyptian 'Abbāsid Caliphs has had some repercussion in our own time, unexpectedly silenced by Mustapha Kemal when he abolished the Caliphate.

Perhaps the writer's desire to emphasize his views has led him to some unnecessary repetition, and the form in which Arabic words are reproduced is likely to provoke criticism; thus on p. 266 we find *muhatsib* written three times for *muhtasib*, and on p. 265 *Khutbah* represents both خطبة and خطباء. Misprints are not numerous: probably the worst is on p. 108, where the legend on a coin is rendered "hopeful of the money of God", where "mercy" is meant.

A. 678.

D. S. MARGOLIOUTH.

THE MUGHAL EMPIRE. From Bābar to Aurangzeb. By S. M. JAFFAR. $7 \times 4\frac{1}{2}$, pp. xxiv + 441, maps 4. Peshawar : S. M. Sadiq Khan, 1936. Rs. 5.

Mr. Jaffar thinks that the teaching of " wrong history " is, more than anything else, responsible for communal disorders in India, and that in order to promote appeasement the history of the Mogul period requires to be re-written : his premiss is questionable, but the reviewer is concerned with achievement rather than motive. Most of the book tells a familiar story, but the author has missed much recent work, and consequently reproduces some outworn legends ; for instance, his account of Akbar's administration (ch. viii) is largely obsolete. His revision is concerned mainly with the character of Akbar, and with the attitude of Aurangzeb. Akbar, we are told in ch. vii, lived and died a good Muslim, and if he introduced a new religion, it was for political purposes only. To present Akbar as merely a political animal is over-simplification, for there is no doubt that he was a religious animal also. Possibly Mr. Jaffar would have seen things differently if he had read MacLagan's *Jesuits at the Mogul Court* (1932) ; and at any rate he would scarcely have made the ludicrous suggestion (p. 137) that the members of the first mission got their facts from Muslim extremists. Aurangzeb is presented in ch. xiv as driven to severity by frequent and gross Hindu outrages, not as a bigot who drove Hindus into revolt ; that question is too large to be discussed in a short notice, and I must content myself with advising readers to compare Mr. Jaffar's version with that given by Sarkar in vol. iv of the *Cambridge History of India*, and to form their own conclusions. Mr. Jaffar, it may be noted, claims (p. 413) to have used this volume, which had not been published when his book reached England. Speaking generally, there are too many inaccuracies and lapses of scholarship to justify a recommendation of the book for the beginners for whom it is intended. To give a few instances, the Victorian von Noer and the home-keeping de Laet " visited India "

during the Mogul period (p. 1); Terry is described as an ambassador (p. 2); Bābur's "secret testament" (p. 23) is eulogized without any hint that its authenticity is dubious (*vide* this JOURNAL, 1923, p. 78); Akbar's Rajput marriages, which began in 1562, were a consequence of the proclamation of the Divine Faith twenty years later (p. 130); musketeers are converted into gunners (p. 231, and *Bādshāhnāma*, i, 437); Masulipatam was in Mogul territory in 1616 (p. 366); and the list could be made much longer did space permit. Lastly, it must be said that Mr. Jaffar's language regarding Hindus is occasionally inconsistent with his declared purpose, as when he describes Hinduism (p. 126) as "nothing more than a set of ceremonies": that will not, I fear, make for communal appeasement.

A. 812.

W. H. MORELAND.

THE EVOLUTION OF THE KHALSA. Vol. I.: The Foundation of the Sikh Panth. By INDUBHUSAN BANERJEE. $8\frac{3}{4} \times 5\frac{3}{4}$, pp. x + 311. Calcutta: The University of Calcutta, 1936.

This interesting work deals with the development of Sikhism during what may be called "the Peaceful Period" of the first five Gurus, down to the completion of the Granth Sahib in 1604, and it will, we hope, be followed by further and still more interesting accounts of the evolution of the Panth in its more militant days. In dealing with the actual history of the Gurus the author, without disregarding the traditional standpoint, is inclined to discredit the purely legendary aspect; and his treatment of the various social and religious enigmas, such as the relation of the earlier Gurus to the caste system, the sacred thread, polytheism, pilgrimage, etc., is careful and full of good sense. "Sikhism," says the author, "no doubt started in a protest, but it was a protest against conventionalism and not against Hinduism."

A. 841.

E. D. MACLAGAN.

MALWA IN TRANSITION. The First Phase, 1698-1765. By RAGHUBIR SINH. $8\frac{1}{2} \times 5\frac{1}{2}$, pp. xv + 391. Bombay: D.B. Taraporevala & Co., 1936. Rs. 5.

Malcolm's account of Mālwa in his *Memoir of Central India* has long been out of date ; much fresh evidence in Marathi has come to light since Irvine wrote his *Later Mughals* ; and Sir Jadunath Sarkar's two volumes on the *Fall of the Mughal Empire* are concerned more with the decline of the central government than with provincial matters. For these reasons this volume, which is the first attempt to write a connected history of Mālwa from the decline of Mughal rule to the consolidation of Maratha power, is an important contribution to the provincial history of India in the first half of the eighteenth century.

Because of its strategic importance the Mughal emperors paid considerable attention to the *sūba* of Mālwa, through which ran the main military routes connecting northern India with the Deccan. With the decline of the empire, Mālwa was exposed to Maratha incursions. As early as 1730 southern Mālwa passed into Maratha hands and, by 1741, the whole province had suffered the same fate. It was in this year that Muhammad Shāh was compelled to recognize their usurpations by issuing a *farmān* appointing the Peshwā Bālaji Rāo as deputy-governor. After the third battle of Pānipat (1761) power passed to the Maratha generals and Sindhia, Holkar, and the Pawārs controlled Mālwa. In an interesting concluding chapter the author summarizes the main results of the Maratha occupation upon the social and economic condition of the people.

The book is well documented, and extensive use has been made of the recently-published *Selections from the Peshwa's Daftār*. But the author acknowledges that he has not exhausted the sources relating to Mālwa and believes that much local material is to be found in the archives of the Bhopāl state. It is important to note that he considers the letters of the

Mandloi Daftar to be spurious. Like most Indian writers he takes it for granted that his English readers are acquainted with obscure Indian terms. This is unfortunate, and a glossary or explanations in the text would have made certain passages more intelligible to the general reader.

C. COLLIN DAVIES.

CREATIVE INDIA. From Mohenjo Daro to the Age of Rāmakṛṣṇa-Vivekānanda. By BENOV KUMAR SARKAR. $8\frac{3}{4} \times 5\frac{3}{4}$, pp. x + 714. Lahore: Moti Lal Banarsi Das, 1937. Rs. 15.

This is a big volume dealing with manifestations of the creative spirit of India "from Mohenjo Daro to the age of Rāmakṛṣṇa-Vivekānanda". There is little within these spacious limits that escapes the notice of the writer, whether it be in Literature, Art, Science, Sociology, Philosophy, or Modern Politics, and the book displays a very wide range of interest and a great facility of diction based on the most modern standards. The writer explains the scope of his work by saying: "The pluralistic trends of the Indian *Gestat* of civilization or culture-complex *in motion* constitute the dynamic perspective of the investigation." How far a book of such copiousness will appeal to the ordinary scholastic reader of this *Journal* it is difficult to say, but students who wish to see the claims of India to influence and to progress, set forth and championed in full detail, will find much to interest them in these pages.

A. 863.

E. D. MACLAGAN.

DIE SŪRYAPRAJÑAPTI. Versuch einer Textgeschichte. By JOSEF FRIEDRICH KOHL. Bonner Orientalistische Studien, Heft 20. $9\frac{3}{4} \times 6\frac{1}{2}$, pp. xlii + 109. Stuttgart: W. Kohlhammer, 1937. RM. 10.

At the suggestion of Professor Kirfel Mr. Kohl has given us in transcription the text of the *Sūryaprajñapti* compared with the corresponding portions of the *Jambūdvīpaprajñapti*.

Unfortunately he has had available for his work only a limited text-material, and therefore has not been in the position to throw light on the many obscurities of the texts. On the other hand, the comparison renders it much easier to appreciate the relation between the two texts. The author concludes from examination of the *Sūryaprajñapti* and kindred works that the present text is a compilation in which three distinct parts (i-ix, x-xvi, xvii-xx) can easily be traced, and this may readily be accorded. The Jain tradition records as the seventh Upāṅga a *Candraprajñapti*, which, however, in the manuscripts is no more than the *Sūryaprajñapti*. That, however, a *Candraprajñapti* arose earlier than the *Sūryaprajñapti* and the *Jambūdvīpaprajñapti* is quite unproved, and equally improbable is the conclusion (p. xxvii) that there existed a text in Gāthās, which was the foundation of these three texts and of the *Dvīpasāgaraprajñapti*, which agrees in part with the third section of the present *Sūryaprajñapti*. There is nothing whatever to indicate that the material was not originally worked up in prose form with memorial stanzas interspersed, a form of exposition which seems to have flourished in India.

The author insists on the distinction between a calendar based on the moon as representing the view of a pre-Aryan race, matriarchal and deeply interested in plant life, while a calendar based on the sun is the sign of patriarchal pastoral immigrants. He stresses also the five day week of the *Sūryaprajñapti* (x, 15) with its distinction of lunar days and lunar nights, fifteen in each half-month, presenting an interesting contrast with the orthodox doctrine of thirty *tithis* in the month. He has an ingenious theory of the original character of the *karanas*, which he connects with the heliacal Jupiter cycle, holding that only later were they converted into a system of lunar half-days. But this theory seems to rest largely on the late zodiac depicted on a temple wall at Trichinopoly where of eleven *karanas* eight agree with the Chinese zodiac figures, and the remaining three are the typically Indian lion, elephant and

parrot. This seems a hopelessly weak basis for a conjecture in itself unsupported, and for the further thesis that the original zodiac in India belonged to the East Asiatic, and not to the West Asiatic type.

A. 918.

A. BERRIEDALE KEITH.

KURKIHAR, GAYA, AND BODH-GAYA. By S. K. SARASVATI and K. C. SARKAR. $9\frac{1}{2} \times 6\frac{1}{4}$, pp. vii + 56, ills. 18. Calcutta : K. C. Sarkar, 1936. Rs. 2.

This is an account of a visit paid in 1931 to the village of Kurkīhār in the Gayā district, inspired by the discovery there in the previous year of an important hoard of bronze images dating from about the ninth century A.D., which have since been transferred to the Patna Museum and have been described by Dr. K. P. Jayaswal in the *Journal of the Indian Society of Oriental Art* for March, 1935. An introductory note on the iconographic and other features of these metal images has been written by Dr. Stella Kramrisch. The description of other sculptures still to be seen at Kurkīhār contains several details not hitherto published. The remainder of the brochure (pp. 31-56) is devoted to short accounts of Gayā and Bodh-Gayā and sites in their vicinities : these have been more fully described in other works.

A. 858.

C. E. A. W. OLDHAM.

Art, Archæology, Anthropology

BIBLIOGRAPHIE ZUR GESCHICHTE DER SCHRIFT. By PAUL SATTLER and GöTZ VON SELLE. (Archiv für Bibliographie, Beiheft 17.) $9\frac{1}{2} \times 6\frac{1}{4}$, pp. xx + 234. Linz : Franz Winkler. 1935.

The reviewer can deal only with the section devoted to the Semitic languages. The preface disarms criticism by stating that only important items are noted ; but there is no mention of the weighty section on Arabic writing in the *Annali* of

Caetani. It is not just a question of what is important; the work on this section is perfunctory. Many more items might have been added from the list in Lidzbarski's *Handbuch*. In other ways the work is careless. G. A. Cooke becomes C. A. in the body of the book and in the index he is combined with A. C. Cooke.

A. 697.

A. S. TRITTON.

ALTSINAITISCHE FORSCHUNGEN, EPIGRAPHISCHES, UND HISTORISCHES. Von HUBERT GRIMME. Studien zur Geschichte und Kultur des Altertums, Band xx, Heft 3. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. vi + 170, pls. 17, figs. 2. Paderborn : Ferdinand Schöningh. London : G. E. J. Coldwell, 1937. RM. 10·50.

In this work Professor Grimme continues his studies of the Sinaitic graffiti, giving his decipherment of the most recent additions to the collection, some improvements on his earlier interpretations, a list of the words which he claims to have deciphered, a comparative table of old Semitic alphabets, and essays on the historical and cultural matter which can be enucleated from the texts. That the work contains much that is of value should be generally admitted.

Some specimens of the decipherment and translation will illustrate its character.

ו ש(ו)בב בן נמשאל ו חם זה בחל

וישן בחל מסבי מנמ סני

Dieser ist Schobab, Sohn des Nemaschel. Dieser ist verschieden während er in Krankheit war.

Und er hatte geschlafen in der Krankheit im Umkreise der Inkubationsstätte von Sinai.

No. 360.

מיימן בהזה עלה נם לנ

Mijjamin hat an dieser Stelle jubiliert, geschlafen, übernachtet.

Considering how brief these inscriptions are, they would seem to contain unnecessary verbiage. The use of the *waw consecutive* for the pluperfect is scarcely admissible; hence in the first for *and he had slept* we must substitute *and he slept*. Yet after his death he could not repose in illness. Further the incubation place must have been very small if he could repose *round* it. Further since death is normally preceded by illness, the insistence on this is surprising. Mijjamin in No. 360 would have been more helpful if in lieu of stating that he not only slept, but passed the night—for that is how most people try to pass the night—he had mentioned what he exulted about.

The most important of the texts, which to the fundamentalist might even seem too good to be true, is No. 349 of which Professor Grimme's latest decipherment and translation are as follows:—

אג התרפסחו מש
רben אבנמ ובה סני
סרט מלו בסני מסמ
פ.לו הנאש נפשו
ו משוחן מימ ו
נשענת על
סנה ל

Ich bin Hatsepschumosch Verwalter des Erzgesteins und des heiligen Bezirks Schreiber der fronarbeitenden Leute auf Sinai Sie hatten vermutet: Siehe, seine Seele ist verzweifelt und du hast mich gegriffen heraus aus dem Nile (?) und ich habe mich gestützt auf jemand der mir Feind (—Feindin ?—) war.

The first part of the writer's name is most ingeniously identified with that of an Egyptian princess—doubtless the lady who adopted Moses. Their guessing that his soul was in despair was doubtless an inference from his sailing unaccompanied in a papyrus boat on the Nile; as he was three months old at the time, he must indeed have been precocious if their guess was correct. His being called by

the last syllable of his name has an analogy in our use of *bus* for *omnibus*. When scratching the inscription he was a mining engineer—we can only hope that such craftsmen in the fifteenth century B.C. had a better reputation for veracity than they had in our time.

If decipherment and translation are correct this autobiographical notice by Moses is a marvellous confirmation of the little told about his early years in Exodus II. It is true that his Hebrew in grammar, vocabulary, and orthography leaves a good deal to be desired, but his studies in mining engineering may have left him little time for philology.

If the decipherer were to say to the reviewer *si quid novisti rectius istis, candidus imperti*, the latter would be compelled to decline; on the other hand he might not assent to the consequence *si non, his utere mecum*.

A. 891.

D. S. MARGOLIOUTH.

ANCIENT ORIENTAL SEALS IN THE COLLECTION OF MRS. AGNES

BALDWIN BRETT. By H. H. VON DER OSTEN. The University of Chicago Oriental Institute Publications. Vol. XXXVII. 12 × 9 $\frac{1}{2}$, pp. xi + 76, pls. xii, figs. 20. Chicago: University of Chicago Press, 1936. 18s.

This catalogue is in effect a pendant to the author's previous publication of the Newell Collection. For example, it contains a very useful bibliography of collections of ancient seals and of sites on which they have been found, but it is emphasized that this bibliography is only a continuation of that in the earlier work, and is not complete by itself. Nevertheless the present book is in all respects a valuable contribution to sigillography, since Mrs. Brett possesses several exceedingly fine and interesting specimens in a quite small collection ranging from archaic Sumerian to Sasanian times. Scarcely any have been published before. The period of the Third Dynasty of Ur is well represented—one (No. 48) bears the inscription of Ahuni, cupbearer of Šu-Sin (usually called

Gimil-Sin), King of Ur. There is also a noteworthy group of seals, showing mixed styles, which are presumably from Syria or Phoenicia, and which the author describes as ““Hittite””, a title which his use of inverted commas seems to admit is provisional and unsatisfactory. It is one of the shortcomings of this work that the author states nowhere which seals he attributes to which category or, for that matter, what the categories are. It has to be gleaned from incidental references, e.g. p. 39, that No. 100 is apparently one of a “Cypriot” style or group. The ingenious graph of styles and occurrences of seals on p. 2 is all that deals with this topic, and it is abruptly introduced without any accompanying text which might explain the questions it provokes, such as, for example, what are “Hittite” seals *c.* 2000 B.C., and in what way are they to be distinguished from the ““Hittite”” seals, *c.* 1500 B.C., already mentioned? I eventually found that this graph was reprinted from the Newell publication, where it is accompanied, though hardly explained, by a few lines. But Mr. von der Osten might have referred to the fact in the present work. In all other respects he is cautious and efficient. The analyses of the details, such as dress, furniture, etc., on the seals are systematically accompanied by drawings, a welcome innovation. It is clear from the scene above the stela of Hammurabi that the object von der Osten calls “libra” is not, as he suggests, a libation vessel, but a symbolic object representing a rod and ring combined. The view is very probable which makes it the measuring rod and cord of flax (cf. Ezekiel, xl, 3) which the god hands the king to use in building his temple.

These criticisms apart, we can only be grateful for this publication with its good reproductions, and hope for more of the same kind. It will then be possible to study, as groups, many groups of seals which have much information to disclose. It is evident, for one thing, from the small collection of Mrs. Brett that there were in Syria in the second millennium B.C. a multitude of local “schools” of seal-cutting, each with

its own distinctive individuality—and each awaits study. The probability that many of these local schools may have been centres of art in other kinds of which we know nothing, makes us doubly aware of our present ignorance of the archæology of that period.

Islam

EIN HAMDANI-FUND : UEBER DAS BERLINER UNICUM DER BEIDEN ERSTEN BÜCHER DES IKLL. By OSCAR LÖFGREN. Uppsala Universitets Arsskrift, 1935, 7. $9\frac{1}{2} \times 6$, pp. 32, pl. 1. Uppsala : A. B. Lundequistkska Bokhandeln, 1935.

All who have made any study of South Arabian Epigraphy are aware of the value attached to the works of Abu Muḥammad al-Hasan al-Hamdani, one of the few Muslims who took the trouble to acquire the old Arabian alphabet. Of his work *Iklil*, dealing with South Arabian antiquities, only two parts, the eighth and the tenth, were known to be in existence : H. Derenbourg doubted whether the remaining eight had ever been composed. Dr. Löfgren has had the extraordinary luck to discover a copy of parts i and ii, and indeed in a most unlikely place : the Staatsbibliothek of Berlin ! In this pamphlet he gives a list of all known MSS. of parts viii and x, with an account of their use and publication by scholars from Sprenger and D. H. Müller to Père Anastase al-Karmeli : an annotated copy of the Preface to the parts which he has discovered, and an analysis of their contents : an extract from Hamdāni's, *القصيدة الامامية*, incorporated in the same MS : and a photographic facsimile of two pages. His edition of the whole will be awaited with keen interest.

On p. 20, line 1, I should prefer حُكْمًا : من الاشعار ما تكون حُكْمًا, ايم الله في الذين جَلُوا, Line 4, I should prefer حِكْمًا : خَلُوا : the phrase is from Surah x, 102.

Page 21, line 6, من قطْرِهِمْ إِلَى مِنْ قَطْرِهِمْ بِالْيَمَنِ probably
should be read.

Line 2 a.f. for جَمِيل سُفْرَهَا read جَمِيل after Surah Ixii, 5.

D. S. MARGOLIOUTH.

THE RENAISSANCE OF ISLAM (translated from the German of Adam Mez). By SALAHUDDIN KHUDA BAKHSH and D. S. MARGOLIOUTH. $9\frac{3}{4} \times 6\frac{1}{4}$, pp. [i] + ii + iii + [i] + 517. Patna : The Jubilee Printing and Publishing House, 1937.

The original German edition of this book (*Die Renaissance des Islams*), published posthumously at Heidelberg in 1922—Mez died in 1917—was reviewed in the columns of this *Journal* in 1924 (pp. 725–6), and it is therefore not necessary to amplify Mr. J. Allan's remarks there. The late Mr. S. Khuda Bakhsh, whose *Islamic Civilization* (2nd edition, Calcutta, 1929–30), based on von Kremer's *Culturgeschichtliche Streifzüge*, must be accounted one of the most considerable works on Muslim culture ever written by an Indian, has done a useful service in translating the remarkably spacious and well-documented work of Mez. The translation was incomplete at his death, and Professor Margoliouth, whose pupil Mr. Khuda Bakhsh was, as a laudable act of piety completed the version.

The greater part of this translation was published in *Islamic Culture* between the years 1928 and 1933, but there was certainly justification for issuing it in complete and compact form, and it is to be hoped that the book will have a good distribution. A Spanish translation by Señor Salvador Vila was published in 1936.

A short review cannot do justice to the labour of love undertaken by the two translators, who have added occasional footnotes explaining or correcting the text of Mez. I am able to solve a problem raised on p. 514, where the translator (Prof. Margoliouth) reads, “At that time if a vessel arrived,

the Chinese would seize the cargo, bring it into the sheds, guarantee it for six months *till the last of the sailors arrived . . .*" (the italics are mine), and adds (n. 7), "It is not clear what this means, but the German cannot be rendered otherwise". The quotation is from Reinaud's *Relation des Voyages*, p. 46 [translated from the anonymous *Akhbâr al-Sîn wa'l-Hind*] : a similar passage occurs in the recently identified *Tabâ'i' al-hayawânât* of al-Marwâzî (see *JRAS*, 1937, p. 482, n. 2), fol. 17a, where it is stated that "the goods are brought out of the vessels and placed in warehouses, the officials fixing seals on them, and buying and selling is prevented for six months, *until the end of the windy season*". This makes the meaning clear : traffic does not begin on shore until the last of the ships for that season have arrived, so that prices may be stabilized when the total volume of goods is known.

To the captious it may appear curious that on the spine of the volume—bound in Indian cloth—the names of the translators appear, but not the name of the author. It is a serious drawback that the book has no index. No diacritical points have been used, but misprints are not very numerous.

A. 969.

A. J. ARBERRY.

ABOU T-TAYYIB AL-MOTANABBÎ. Un poète arabe du IV^e siècle de l'Hégire (X^e siècle de J.-C.). By R. BLACHÈRE. 10 × 6, pp. xix + 366, maps 3. Paris : Adrien-Maisonneuve, 1935.

Over a hundred years have passed since Joseph von Hammer published his German "translation"—the only complete one—of *Motenebbi, der grösste Arabische Dichter*; but though in view of recent celebrations the poet's fame may fitly be described as European, there has not hitherto been available any large and systematic study of his life and work by a Western scholar. Professor Blachère's monograph, which does away with this long-standing reproach, is worthy of its theme. Beginning with an historical introduction, the detailed

and richly documented narrative brings the career and personality of Mutanabbí into clear light and raises many points of interest which cannot be discussed here. Attention should be drawn, however, to the careful review of evidence for and against the allegation that Mutanabbí proclaimed himself a prophet, performed miracles, and recited revelations in the style of the Qur'án (pp. 66-72). That the poet, suffering from a violent "inferiority complex", not only carried on subversive (and, naturally, semi-religious) propaganda among the Bedouins of Syria, but headed a revolt which cost him two years in prison, is beyond dispute. It is hardly less certain that his nickname, "the false prophet" (*mutanabbi*), was originated by this youthful escapade. All that remains questionable is whether he assumed the title of *nabi*, and, if so, in what sense. Did he really mean to brand himself with the worst heresy a Moslem can commit? Without discarding the Oriental tradition altogether, Professor Blachère makes important reservations. These are best stated in his own words.

"Abou t-Tayyib ne mentait pas quand il niait s'être jamais donné comme Prophète ; il sous-entendait : comme Prophète à la manière de Mahomet, à la manière dont le comprenaient ses interlocuteurs. Nous saisissons donc sa gêne quand on lui demandait l'origine de son sobriquet. Il ne pouvait avouer qu'il lui avait été donné à la suite d'une insurrection qarmaṭe. Nous saisissons enfin pourquoi la crédulité publique, d'une part, et la haine de ses détracteurs, d'autre part, avaient accepté si facilement un *on-dit* qui s'inspirait d'un fait réel, déformé par des gens ignorant la véritable nature du Qarmatisme, ne voyant dans les Imâm de cette secte que des hérétiques singeant le Prophète Mahomet. Certes les informations directes que nous avons rapportées touchant la pseudo-propagande prophétique d'Abou t-Tayyib sont suspectes, mais

Parfois un peu de vérité
Se mêle au plus grossier mensonge.

Il apparaît comme très possible, en définitive, de retrouver

dans ces contes un écho de ce que fut réellement la propagande politico-religieuse d'Abou t-Tayyib."

This seems to me to come pretty near the truth of the matter. The volume includes a large number of translations with critical remarks on the evolution of Mutanabbi's style and the characteristics of his poetry in general and particular. Excellent as the criticism is, I must confess to finding it sometimes more severely logical than the nature of the case allows. In appraising Oriental literature we have to recognize that the terms "merit" and "defect" are not absolute. There is no question of surrendering our right to investigate, analyse, and judge for ourselves, but rather of maintaining a balance between widely different standards of value, each of which has a long history behind it and represents a deep-rooted artistic tradition. From some points of view, at least, savants born and bred in Moslem countries possess the same advantage over European critics of Mutanabbi as the latter enjoy when they seek to appreciate the art of Shakespeare, Dante, or Racine. The author ends with a survey of the immense literature concerning Mutanabbi which has accumulated during the last thousand years "dans le monde 'arabe' et chez les orientalistes". His work, modestly described as an essay, shows mastery of the subject and is assured of a warm welcome.

R. A. NICHOLSON.

Cuneiform

LETTERS OF THE FIRST BABYLONIAN DYNASTY IN THE JOHN RYLANDS LIBRARY, MANCHESTER. By T. FISH. $10\frac{1}{2} \times 6\frac{1}{2}$, pp. 55. Manchester: Manchester University Press, 1936. 3s. 6d.

This collection of well-preserved documents, numbering twenty-nine and two fragments, is republished in an improved version from the *Bulletin* of the John Rylands Library. They belong to a class now well known, but new specimens are always welcome not only for the information which they convey but as examples of the ordinary Akkadian speech of the "classical" period in Babylonia. One or two of the

minor localities here mentioned are found again in the collection of the Berlin Museum published by O. Schroeder and translated by P. Kraus, so that a common provenance may be assumed for at least a part of both groups; the author suggests Sippar, though there seems to be no clear indication of this. Their contents are of the usual workaday style, several being concerned with details of farming and irrigation, one or two begging letters (No. 1 is amusingly "Oriental"), and various matters of administration. The autographed copies are clear and doubtless correct in general, though there are lines which one may suspect, since in their present form they seem to make no sense. With the assistance of Professor Dossin, which he fitly acknowledges, the author has improved his earlier translations, but there are several passages which can hardly be correct, though the right rendering is not always evident: No. 2, 7 and No. 6, 15, *aššum beltia*, "by my Lady!" ; No. 4, 13, 14, "I have been here for ten days past" ; No. 5, 20, "let him have his former property" ; No. 7, 18 (and elsewhere), *reqū* is probably "to be idle" rather than "to be in want" ; No. 8, 11, No. 12, 4, No. 15, 25, No. 16, 8, there are discrepancies between transliteration and translation ; No. 15, 20, "they will not fulfil their (allotted) task" ; No. 16, 7, the reading is probably incorrect. There are useful lists of words, ideograms, and names.

A. 836.

C. J. GADD.

VOTIVE AND HISTORICAL TEXTS FROM BABYLONIA AND ASSYRIA. By FERRIS J. STEPHENS. Yale Oriental Series, Babylonian Texts, Vol. IX. 12 × 9, pp. xvi + 45, pls. xlvi. London : Humphrey Milford, Oxford University Press, 1937. 23s.

In this handsomely-produced volume Dr. Stephens continues the work of the late Professor A. T. Clay, his predecessor, in publishing recently acquired cuneiform texts, now preserved in the Babylonian Collection at Yale. Those here presented are of the kind which approach most nearly to historical

records by giving the names of rulers and courtiers or officials of the earlier Babylonian periods, though they seldom mention even incidentally anything that can be called an historical event. Nevertheless in the reconstructing of history they have the value of contemporary documents, however defective their information, and the light which they throw upon custom and religion, not to mention their linguistic importance, is even more interesting.

Dr. Stephens has divided his material into two parts, the first of which (Nos. 1–86) comprises new texts, or duplicates which bring important restorations and rectifications of known texts, while the second (Nos. 87–149) are duplicates of less value. Texts in the first class are given in excellent and clear copies, and described as to their identity and external features in a catalogue which begins the book; those in the second are only described in the Catalogue. Translations are not included, being reserved for another volume which the author has in hand. There is, however, a full index of names of persons, deities, and places mentioned.

Since a subsequent volume of translation and comment is to be expected it would be out of place here to do more than indicate a few of the most interesting inscriptions: No. 2, a very early mention of the god Marduk; No. 6, an inscription of Il, governor of Umma, already known as a nominee of Entemena; No. 22, Ishme-Dagan builds the wall of a place where he was *šakkanakku* in his youth; No. 35, a wordy but linguistically valuable account of Samsuiluna's rebuilding of Kish, containing some historical allusions; No. 62, inscription of a certain Nidnusha, ruler of Dêr in the Old Babylonian period, with much insistence upon the "justice" which was evidently taken so seriously as a duty by kings at that time; No. 73, a clay cube which had served as a lot (*pûru*) for Iahali, an officer of Shalmaneser III of Assyria, possibly in his election to the eponymate, which is mentioned in the inscription.

Miscellaneous

THE ESOTERIC TRADITION. By G. DE PURUCKER. In two volumes. pp. xvi + 1109 + 71. Theosophical University Press, Point Loma, Cal., U.S.A., 1935.

The author sets out by admitting that this immense number of pages was a work of dictation accomplished within a year, of necessity, because he had in print undertaken to do so ; that it has gone unpruned to press. To the outsider the lesser guilt had been the breaking a self-imposed promise and a severe handling by séateurs. There are limits to what a writer is entitled to expect of the patient reader. The best excuse is the library shelf and on it a goodly supply for reference. And to some extent the excuse is here valid. Yet even so its inherent defect—that of inadequate supplying of evidence *such as can weigh*—militates against its usefulness. One is immersed in, smothered by, an immense froth of words, three-fourths of which had been better cut out. And where there is quotation, there is often the insidious tendency to vary here and there from the literal rendering, where by so doing the argument for all that is claimed for the title of the book is strengthened. For instance, in the Buddhist ecclesiastical formula of the “three refuges” (incidentally the Pali, here called Sanskrit, is misspelt), the *sangha* : assembly or church, is called “the Holy Ones”, an ascription never claimed in these terms for it in the Pali Canon, where the “*sangha*” is either the monks and laity, or the monks only. And that “unholy ones” abounded is painfully evident in Vinaya and elsewhere. We meanwhile are left to infer that the formula was “drawn up by esoteric Initiates”.

The author disclaims all responsibility for the much he has given us : “I pass on what has been given me . . .” There is doubtless more truth in that than most of us believe ; but it is not calculated, thus unsupported, to make these outpourings more credible. There is more virtue in “standing to one’s

guns". Nevertheless it is not without interest to judge in this work the mental calibre of at least one trans-“Occidental” Theosophist who has many hard things, not all undeserved, to say about us mid-“Occidentals.”

A. 723.

C. A. F. RHYS DAVIDS.

STUDI ETIOPICI : I. LA LINGUA E LA STORIA D'HARAR. By ENRICO CERULLI. 10 × 7, pp. 472. Roma, Instituto per l'Oriente, 1936.

This work, as the title indicates, is partly historical and partly philological. The first fifty-five pages contain a narrative of the Muslim settlements in Abyssinia, being largely a record of their struggles with the Christians, and their internal dynastic wars. The latter record reproduces in miniature what happened in other Muslim communities, and formed the basis of Ibn Khaldun's philosophy of history. Adventurers who rose to power were unwilling to displace the hereditary sovereigns, and for a time allowed them to retain their titles and to be supported out of the taxes; and there was much shifting of capitals. One of these was Harar, a name which the recent Italo-Abyssinian war has rendered fairly familiar. A curious case of divine intervention in favour of a Muslim conqueror of the Christians recorded by both communities is that of Ahmad b. Ibrahim, called by the Abyssinians Mancino; according to both he had a divine mission, attested by miracles; the mission being thought of differently as *di vittoria o di castigo*.

This narrative, which is put together from Ethiopic and Arabic sources and some notices by European missionaries, is admirably written and of great interest. It is easier to admire than to criticize, since some of the sources are unpublished, and not all the published ones are easily accessible. Criticism of the second part of the work would be even more presumptuous, as it breaks entirely, or almost entirely, fresh ground, consisting of an elaborate phonology and grammar, a chrestomathy, and a vocabulary of the Harar dialect, with

a complete archaic text reproduced in Arabic script with transliteration and translation. It is difficult to say which is farther removed from the old Semitic idiom, this dialect or the Amharic, which the works of I. Guidi in Italian and Mr. Armbruster in English have rendered fairly familiar, or at least accessible. Hence Signor Cerulli's work evokes nothing but gratitude and admiration.

D. S. MARGOLIOUTH.

THE LEGACY OF ASIA AND WESTERN MAN. A Study of the Middle Way. By ALAN W. WATTS. $7\frac{3}{4} \times 5\frac{1}{4}$, pp. xviii + 187. London: John Murray, 1937. 6s.

This book is concerned not so much with what Asia has to bequeath to the West, as with the relation of that bequest to Western traditions and Western life. The author holds that, in order to preserve the West from a "rational" civilization, based on the worship of the human reason, a vital Christianity, reinforced by all that Asia and modern psychology can give, is needed. A purely rational civilization must mean a purely mechanized life—Marxism and Fascism alike lead to social determination, and against this man is in revolt, seeking instinctively for the unpredictable and the mysterious. Our task is to become conscious of the unconscious and to recognize its claims, and in this the more catholic psychology of Asia may be of help. The principle to be sought is that of the Middle Way, which is not so much the mean between two extremes as the product of their union, and by it the writer believes that man is enabled to be at peace with life and death, to recognize the demands alike of the conscious and the unconscious, to harmonize reason and nature, law and liberty, West and East.

The "fall" of man, the conflict between good and evil, is seen to be due to man's attachment to the ego, and the desire to separate self from the universe, apart from which it cannot exist. It is necessary to find that which relates these opposites to each other and surpasses both, and the author holds that

Christianity has satisfied this need, in teaching the doctrine of Divine grace, by which man is led to desire the highest good, and can attain salvation, whatever his moral status—the part is reconciled with the whole, and man with the universe.

But before this reconciling principle—the Christ of the West, the Tao of the East—can be realized, there must be a union between man and the universe, and this can only be achieved by the acceptance of life in all its aspects, giving up the attempt to make the universe subservient to the self. Then man no longer acts in accordance with either good or evil, but with that which transcends them: life for him has become the process of himself working in the universe and the universe working in him.

But the Zen philosophy of the East¹ teaches that religion and everyday experience are one and the same: the conflict between the self and the universe is an illusion, religion is just a matter of "becoming what we are", and so at last we find that we have really been at the goal all the time: "the end is the beginning," but the whole world lies between.

So the author strives to show how the wisdom of the East and the West may be transformed by means of the fruit which comes of their union, and this fruit is the Middle Way, which each individual must experience for himself, until he sees both the personal and the universal meaning of all that comes to him.

This is a stimulating, thought-provoking book, of great interest because of the light which it throws upon modern problems and the solution which it offers. Its value is enhanced by the bibliography, glossary, and index with which it is provided.

MARGARET SMITH.

¹ Mr. Watts has dealt more fully with this in another volume, *The Spirit of Zen*.

LES SOURCES INÉDITES DE L'HISTOIRE DU MAROC. Publiées par PIERRE DE CENIVAL et PHILIPPE DE COSSÉ BRISSAC. Première Série—Dynastie Sa'dienne ; Archives et Bibliothèques d'Angleterre : Tome III : Mars 1626-1660. Publication de la Section Historique du Maroc. Paris : Paul Geuthner, 1936. Frs. 150.

The language of these documents is mainly English, but there are some in Spanish, and some in Arabic, these last being letters addressed by sovereigns of Morocco to Charles I. They occupy 617 pages in large quarto, including indeed careful Introductions and valuable marginal notes by the editors. They deal with negotiations between the governments for the regulation of commerce, and restoration of captives ; there is a great deal of repetition owing to the same story being told by different persons who played parts therein. The period was one of great disorder in Morocco, and the place which figures most frequently in the letters, Salé (usually spelt Sally), was divided against itself, but the authority of the emperor was restored by an English expedition commanded by W. Rainsborough, aided by a Marabout who aspired to independence. Many letters deal with the formation of a Barbary Company which was to monopolize the traffic with this region ; its claim to do so was found to be impracticable. From the commencement of the English civil war to the Restoration less attention was devoted to Morocco ; there are, however, several letters about the ransoming or rescuing of captives, and the establishment of a consulate at Tetuan. Like the other volumes in the series this is both interesting and instructive, and the editors have spared no pains in explaining allusions, interpreting obscure expressions, and providing tables and indexes which add greatly to the usefulness of the work.

A. 685.

D. S. MARGOLIOUTH.

ONDERZOEK NAAR DE PARADIJSVOORSTELLING BIJ DE OUDE SEMIETISCHE VOLKEN. By Dr. TH. C. VRIEZEN. Wageningen : H. Veenman and Zonen, 1937.

The bulk of this treatise is in Dutch, but a German summary is given at the end for the benefit of readers to whom the former language is unfamiliar. It is in the main an elaborate commentary on the Paradise episode in Genesis, so elaborate and involving the discussion of so many views that it can serve as an analytical bibliography of the subject. Before proceeding to comment on the Hebrew text the writer furnishes accounts, in some cases with complete translations, of Sumerian, Accadian, and Phoenician documents which have been thought to offer parallels to, or to be the sources of, the Biblical narrative. His results are mainly, though not exclusively, negative, as in these texts he can find nothing quite corresponding with, e.g., the tree of life, the tree of knowledge of good and evil, the creation of Adam from dust and of Eve from his rib, etc., or even with the Garden of Eden. Hence he attributes to the writer or compiler more originality and to his work a larger Palestinian element than do many of his predecessors. His treatment does not exclude the introduction of alien matter, but on the whole recognizes a dramatic unity in the story.

His work is a model of sobriety, being neither fanciful nor over-sceptical, and its discussion of theories which have been advanced probably judicious. Probably the negative conclusions will be found more convincing than the positive, e.g. the suggestion that the representation of the serpent as the tempter is a polemic against serpent-worship, and that the knowledge of good and evil is magical and therefore forbidden knowledge. But we have clearly here a contribution to the study of the Pentateuch which no succeeding commentator can afford to neglect.

ACCORDING TO THE HEBREWS. A New Translation of the Jewish Life of Jesus. By HUGH J. SCHONFIELD. 8 $\frac{3}{4}$ × 6, pp. 272. London : Duckworth, 1937. 10s. 6d.

In a sub-title to this work, it is described as a new translation of the Jewish life of Jesus known as *Toldoth Jesu*, with an inquiry into the nature of its sources and its special relationship to the lost Gospel according to the Hebrews. In conformity with this description, Mr. Schonfield gives us a translation in Biblical style and, as an aid to determining the relationship of the *Toldoth* to the Gospel sources, examines the canonical Gospels, Acts, and Epistles, the Apocryphal Gospels, especially the Gospel of Peter, the Patristic literature, the polemic of Celsus, the Slavonic Josephus, and the Islamic literature. Thus, he covers the ground with much thoroughness, and succeeds at any rate in showing that the *Toldoth* deserves more serious consideration than it has hitherto received.

If the *Toldoth* is a polemical work in Gospel form, composed originally according to the writer of this book as a parody of the Gospel according to the Hebrews, its polemical purpose has not prevented it from agreeing in many places with statements in the Synoptic Gospels. At the same time it contains noteworthy material of an independent character, including certain additional Old Testament Messianic proof-texts. Does it include also independent traditions of any real historical value? Mr. Schonfield thinks that it does. It claims to have knowledge of some episodes in the life of Jesus which, however startling they may seem to be, may be true. These episodes relate particularly to his arrest and to his burial.

The *Toldoth* is of course written in Hebrew. It is of interest to note that the Gospel according to the Hebrews is said to have been written in the same language.

Readers of Mr. Schonfield's book will decide for themselves whether he has proved his case. In any event, his book is certainly one that deserves to be read and taken seriously by all who are interested in New Testament problems. It is a pity

that it contains only one index, an Index of Authorities. It would be improved by the addition of a Subject-index and an Index of Passages quoted from the New Testament, the Talmud, and Josephus.

M. A. CANNEY.

THE COINAGE AND METROLOGY OF THE SULTANS OF DEHLI.

By H. NELSON WRIGHT, F.R.N.S., I.C.S. (retd.), pp. xx + 432. With 24 plates and map. Published for the Government of India. Delhi, Manager of Publications, 1936. 45s. net.

The primary intention was to make a catalogue of the author's collection of the coins of the Sultans of Delhi, now in the Delhi Museum ; Mr. Nelson Wright has adhered to his original purpose, but has also extended the work and made it a corpus. The nucleus is the author's own cabinet which itself surpasses any collection described in former catalogues ; to it have been added not only all recorded coins, but also unpublished pieces in public and private collections. Amongst the last-named special mention must be made of the Guthrie cabinet at Berlin, the Ratan Narain collection at New York, the White King collection sold at Amsterdam in 1905, and the cabinet of Mr. H. R. Nevill now in the Delhi Museum. Nobody was better equipped to undertake this task than Mr. Nelson Wright, collector for thirty years from 1894, generous and hospitable in his dealings with fellow collectors, founder of the Numismatic Society of India. Mr. Nelson Wright published his first observations on these coins in *JRAS.*, 1900. His Indian Museum Catalogue appeared in 1907. The present work describes more than double the number of pieces. It is a splendid achievement. The production is the impeccable work of the Oxford University Press. The excellent illustrations have been collotyped by Messrs. McLagan and Cumming, the firm which produced the Frontispiece and Plates for vol. iii of the Panjab Museum Catalogue, 1934.

No attempt has been made to deal with the history of the Sultans unless it has direct bearing on the coinage ; the author says that the publication of vol. iii of the *Cambridge History of India* has rendered this superfluous, but the reader will not find Firoz Shah Zafar there. The author's objective has been rather to examine and elucidate the metrology of the Delhi series and to evolve some sort of order out of the chaos caused by the extensive use of alloy in the coinage. "This metrology is largely the story of the *tankah* and the *jital*."

The form *tankah* is preferable to *tangah* (p.v.). The reviewer is glad to see the silent "h" represented, as also in Ghaznih and Agraph, but why not Raziyyah ? A specimen of the gold piece of Iltutmish, 49G, was in the Tom Higgins collection catalogued by C. J. Rodgers in 1892. The Provincial Museum, Lucknow, possesses a duplicate of coin 648A ; it came to the Museum in 1935-6 with treasure trove from the Saharanpur District. A recent discovery (p. xix) makes it highly probable that 255 and 255a belong to Tughluq I and not to Balban, and that there are two mints of Sultanpur, those of 486 and 243 respectively ; 305 on p. xix should be 305a. There is a half-mohur in the British Museum of Alau-d-din Muhammad of type 305 ; I got it in Thanesar with piece 423a. The style is poor, but the weight, 82 grains, is correct, and the piece may be genuine. In any case this specimen provides evidence of the existence of the half piece in gold, a denomination otherwise lacking. As regards the footnote on p. 91, a half *tankah* of this kind is in the British Museum ; it was one of my earliest acquisitions, and was found in Delhi. The note to 362 is not quite correct as one of these coins from my collection is in the British Museum. Piece 367 is a dated coin of year 715. The interesting square piece of Mubarak, Thomas 146, is not mentioned ; it may be identical with 372, but this will have to be verified. Specimen Pl. xx, 403a is not in the catalogue, but the legends are those of 417 bis. The ingenious attribution of pieces 454 to 463 (pp. 114 and 156) is clearly right. On p. 157, 476 should

be 475 and vice versa. I have seen several specimens of that odd piece 475, all from the same die, one of which was brought to me with a specimen of 1434, an undoubted fabrication. The consensus of opinion is that 475 is genuine, but the coin is not convincing ; it is not of the Delhi style, and the absence of the word ضب is significant. There is a fully informed discussion of the piece by R. Vasmer in the *Journal of the Kazan University Society of Archaeology, History, and Ethnography*, Kazan, 1927 ; he reads the marginal date as 729. Mr. Vasmer gives examples of Indian coins found in Russia. Money of the Khaljis and the Tughluqs has come to light in the region of the River Volga and the Caspian Sea ; not one of these pieces had been used as an ornament. Gold coins of Muhammad bin Tughluq have been found at least ten times in Russia on territory occupied by the Golden Horde. This Horde conducted a flourishing trade in horses with north-west India. The coins of Firoz bin Abu Bakr (p. 226) may be those of a pretender unknown to history. The pieces of Ahmad bin Firoz (p. 227) belong to the same disturbed period (see also *Num. Chron.*, 1934, p. 240) ; Ahmad may be an engraver's error for Muhammad, but the pieces are quite clear and well struck. It is a pity that the unique one-sixteenth rupee of Sher Shah (p. 386) has disintegrated ; the reviewer well remembers seeing the piece. Our author calls the Suri dam a pice (p. 383) ; this may be correct, but sounds pedantic. Nagarkot is shown in the Map sixty miles east of Kangra, but the famous stronghold Nagarkot or Kot Kangra is on the outskirts of Kangra town.

The distinguished authority, Edward Thomas, F.R.S., was equally at home in ancient and medieval coins, both Hindu and Muslim, and his work *The Chronicles of the Pathan Kings of Delhi* (London, 1871), with its inimitable style and Old Mortality flavour, will remain a classic. Subsequent discovery of coins, unknown to and unsuspected by him, necessitates correction of his conclusions on the metrology of the series. The existence of a one-third piece in gold and one-twelfth

pieces in silver demolishes Thomas's "all-pervading quaternary scale"; it indicates the introduction of a multiple of three, and opens the way to the acceptance of a 96-rati *tankah* in place of that of 100 *ratis*. The silver *tankah* introduced by Iltutmish weighed some 172 grains, and there were forty-eight *jitals* in the Delhi *tankah* (p. 73). These and similar questions were discussed in an elaborate and convincing paper on the metrology of the early Sultans by Messrs. Nelson Wright and H. R. Nevill, which is reproduced as Appendix A. In the present volume the metrological examination has been extended to the later Sultans. Very briefly, Mr. Nelson Wright holds that Muhammad bin Tughluq's billon issue 509 was deliberately meant to replace the silver piece although at the most containing some 47 grains of silver against the full amount of 172 grains (p. 163). "Thus was taken the first step in the degradation of the *tankah* of Iltutmish. From being a coin of almost pure silver it passed through various stages of debasement until it became under Akbar a coin of pure copper" (p. 164). In pursuance of this line of argument the author says, if I read him aright, that the Bahloli with only 24 grains of silver was intended to be a silver *tankah* (p. 258). Yet, though the corresponding Sikandari, with some 5·5 grains of silver, was definitely called a *tankah*, twenty were regarded as equivalent to a rupee, that is to say, it was a black or copper *tankah*. All this seems to be rather a matter of words. The Lodi billon money was a utility rather than a scarcity currency; the fact that the nobler metals were available in quantity is shown by Babur's seizure of the accumulated wealth of the house of Lodi.

The outstanding feature till the time of the Suris is the extensive use of billon, a custom which presents great difficulties in the determination of values. Mr. Nelson Wright has very properly used the method of assay and has got some striking results. He claims that the assays disclose a consistency of silver content sufficient to justify further extensive experiments in this method, but the figures in Appendix B1 do not,

in my opinion, justify that claim. On the whole they confirm the common experience of collectors that some billon pieces of the same denomination look far more silvery than others. Mr. Nelson Wright admits that exactitude and homogeneity in the composition of the individual billon coins was practically an impossibility (p. 72); "the authority of the sovereign was sufficient to allow of these (billon) coins being accepted at their issue value without minute inquiry" (p. 80). I cannot agree that coins of pure copper or with a disproportionate silver content must *ipso facto* be treated as probable fabrications (p. 408), and I fear that further assay will not be helpful. What the assays have done is to disclose an approximate continuity in composition through successive reigns, so confirming the existence and duration of different denominations.

R. B. WHITEHEAD.

CATALOGUE OF THE COINS OF ANCIENT INDIA. Catalogue of the Indian Coins in the British Museum. By JOHN ALLAN. 9 × 6½, pp. clxvii + 318, pls. 46. London : Trustees of British Museum, 1936.

This book is a worthy member of the stately succession of British Museum Coin Catalogues, and Mr. John Allan, Keeper of the Coins, is to be congratulated on the accomplishment of an exacting task. He has taken immense pains to present these difficult coins of ancient India in the most lucid manner; each piece has its symbols and legends admirably reproduced, a laborious and costly process, and all concerned deserve high praise for these special types. The Plates are all that could be desired.

An Introduction of 167 pages prefaces the catalogue proper ; this falls into two parts, the first devoted to the punch-marked class together with uninscribed cast copper coins, and the second to tribal money. There are nine Indexes or Appendixes ; Index iv figures 211 symbols found on punch-marked silver

money, and Index vii has 157 existing on tribal pieces. The Introduction incorporates a careful description of finds. To these may be added one recently made in a ruined monastery at Bairat (Virāṭa), the details of which have kindly been sent me by R. B. Daya Ram Sahni, Director of Archæology, Jaipur State. In the thickness of the east wall of the monastery was found a small earthen jar containing thirty-six well preserved silver coins, eight of the punch-marked type and twenty-eight of Indo-Greek kings from Heliokles to Hermaios. The punch-marked coins were wrapped in a piece of cotton cloth. The hoard is placed in the first century A.D.

Professor Rapson in his important work, "Notes on Indian Coins and Seals," *J.R.A.S.*, 1900, remarked on the great historical importance of the purely native ancient and medieval coinages ; their evidence, joined to that of the stone and copper plate inscriptions, provides practically the only data furnished by India herself for the reconstruction of her history. The author noted that comparatively few of the very numerous series of Hindu coins had yet been systematically collected. Since the War, rapidly increasing attention has been paid to these coins by Indian scholars. The section on tribal coins shows what progress has been made during the present century. The interesting drachms figured on Plates xiv and xvi are extremely rare. The attribution of Plate xvi, 4, to Kulu is primarily due to A. V. Bergny (*J.R.A.S.*, 1900). Should not the weight be 57·5 grains ? Mr. Allan has placed the unique piece Plate xvi, 5, in the uncertain class (p. 281). The Yaudheya silver coin Plate xxxix, 21, remains a solitary specimen. On the other hand the silver pieces of Amoghabhūti (Plate xxii) are common ; the animal on the obverse side has the body and neck of a stag with the unbranched horns and long tail of an ox or buffalo. Yaudheya copper coins like Plate xl, 1 to 9, are abundant in Delhi. The name of the Maurya king Daśaratha has been read by Mr. Jayaswal on Plate xxxiv, 4, but is not certain ; we want more and better specimens of these scarce inscribed Taxila coins. Representative pieces of

the Mālavas have been acquired since the body of the catalogue was printed off (p. civ). Coin 39 on p. 219 should be Plate xxxiv, 5; piece Plate xxxiv, 3, is 123 on p. 229. There is something definite above the elephant on the coin of Uttamadatta, Plate xxiv, 16, which appears more clearly on a piece belonging to Sir Richard Burn, possibly (as suggested by the owner) a date in an era unknown. Attention is drawn to Taxila coin 169 on p. 236, the only gold piece in the book; one or two more are known.

The silver punch-marked coins weighing some 56 grains, or 32 *ratis*, are found abundantly all over India: they bear no legends, cannot be precisely dated, and as a rule are not assignable to a particular locality, in other words they are universal. The term punch-marked seems to have been first used by James Prinsep a century ago (p. xix). Increasing attention has been given to the series since Sir Alexander Cunningham described this money in *Coins of Ancient India*, 1891. Dr. Spooner in 1905 first noticed the grouping arrangement of symbols. Fourteen years later Mr. Walsh published an elaborate description of two hoards found in the province of Bihār; he noticed that in general there were five symbols on the obverse side grouped methodically, and based his classification on this feature.

The so-called "bent bars" are placed in the fourth or fifth century B.C., well anterior to the general body of punch-marked coins; the author refers them to a Persian weight standard, and considers that they represent double, half, and quarter siglois. With them Mr. Allan describes a small number of coins belonging to other early types. The great bulk of punch-marked coins are so much alike that the author sees in them no signs of evolution and infers that they were not being struck over a long period. The problem of the correct interpretation of these pieces is one of the most difficult in the Indian series. "The belief that the various stamps or punches upon them were struck at different times by different hands through which they passed has hitherto prevented their real nature

being recognized. It is true that the punches on them were applied separately and not by a single die, but they were stamped at the same time by the authority issuing them and not from time to time by private individuals. A close examination shows that the types are really as distinct as those on any well-known series. They are far from being a primitive type of coin (p. xix)." The author has no doubt that these coins were a government currency; only a central authority could have carried out such an apparently complicated but doubtless, if we had the clue, simple system of stamping the coins in regular series (p. lxxii). That central authority can only have been the Mauryan administration, so the coins were put into circulation in the third and second centuries B.C. and continued in use for a century or two later; they may be called the Mauryan type. This view is highly reasonable though it may not appeal to the advocates of immemorial antiquity. But coins were known before the Maurya period (p. lxxi). Pieces of an archaic type are described in an excellent and comprehensive monograph on punch-marked coins contributed by Mr. Durga Prasad to *J.A.S.B.*, 1935; it is illustrated by thirty-two Plates drawn by the careful hand of the author. The series with four symbols on the obverse is not represented in the British Museum. Mr. Prasad's Plates 4 and 5 illustrate Mr. Walsh's coins; these are absent from the British Museum (p. xx). Mr. Prasad regards them as pre-Mauryan; they are five-symbol pieces. It is interesting to compare the coins on Plates 9 to 21 with those in the British Museum; the symbols are beautifully drawn and the provenance of each piece is carefully recorded. Mr. Prasad remarks on the resemblance of some of the symbols to the figures and the pictographs of the Mohenjodaro seals. The metrology may also date back to the Indus Age—see Mr. A. S. Hemmy's "The Weight Standards of Ancient Indian Coins," *J.R.A.S.*, 1937. Mr. Allan remarks on such possibilities though he emphasizes the huge period to be bridged (p. lxxiii).

The collection of punch-marked coins in the British Museum

represents the accumulation of a century and a half. The pieces have been gathered in quite haphazard fashion and the significance of the types was not realized (p. xix); the author has had to deal with the material as he found it. Mr. Allan observes that the original collectors were content with a few pieces which they believed to be representative, and did not make the most of their opportunities. This remark applies to the reviewer; if I had my time over again I should not regard these coins as a drug in the market. What is now required is systematic collection of punch-marked coins and a careful record of finds. "It is to be hoped that the detailed examination of future finds on the lines laid down in this Catalogue will enable progress to be made in this field, and in time empower us to give a classification with a historical significance" (p. xix).

OBITUARY NOTICE

Hermann Jacobi

With the passing of Hermann Jacobi on 19th October, 1937, in his eighty-eighth year, the Society lost one of its oldest and most respected Honorary Members, and Orientalism one of its finest scholars. Born in 1850, he proceeded to the University of Berlin in 1868 with the intention of studying mathematics, a bent for which was evinced subsequently in his predilection for astronomical and chronological problems, but he soon turned to Sanskrit and comparative philology. After taking his doctorate at Bonn in 1872, he studied in London for a time and travelled in India, before beginning to teach in Bonn in 1875. The following year he went to Münster as Professor, and in 1885 was appointed to Kiel. Finally in 1889 he was recalled to Bonn as Professor and spent the rest of his life there. This bare outline covers a life of intense scholarly activity in many domains of Sanskrit learning, which it is only possible to indicate briefly here.

It was a characteristic of Jacobi that nearly all his work was in the nature of pioneering, in which he opened out new paths for his successors to tread, and nowhere is this trend more apparent than in the subject which engaged his attention at all stages of life, that of Jainism. Amongst his earliest publications in this line was the edition of the *Ayāranga Sutta* for the Pali Text Society, which was followed by other editions and translations from the canon, while he facilitated the study of Jaina Prakrit by the publication of what is still the best textbook on the subject, the well-known *Ausgewählte Erzählungen*. Next he turned to the philosophical side of this religion, and by his translation of Umāsvāmin's *Tattvārthādhigama-sūtra* laid the foundation of all subsequent work on the subject. From this he went on to tackle the later literature in Apabhraṃśa and with his edition of the *Samarāiccakahā*

and other work led the way in a development which has been of outstanding importance in recent years for Indian linguistics. Among other subjects with which he dealt in earlier days should be mentioned the two great epics, his books on which have a permanent value, and in middle life he did much valuable work on Indian theories of poetics, a line of study in which he has had too few successors among European scholars. In later life he gave most time perhaps to investigations into the early history of the orthodox philosophical systems, attempting more especially to determine the relative dating of the various sūtras and to elucidate their original meaning. Of the numerous books and papers in which his results in this sphere of learning were embodied specific mention should be made of what was almost his last publication, the paper "Über das ursprüngliche Yogasystem" in *SBPAW.*, 1929, which to the writer of this notice ranks among the finest pieces of research ever carried out in the domain of Sanskrit literature.

All Jacobi's work, of which only a portion has been alluded to above, was marked by a thoroughness of scholarship and an accuracy, which would have been remarkable in any age; he had in particular a singular capacity for wresting the last ounce of significance from a text, while command of detail was never allowed to obscure the wider implications of a subject. Whether the views he put forward were acceptable to others or not (and not even the finest scholar can hope always to carry conviction), they were fully thought out with the evidence stated judicially and carefully, and therefore exact earnest consideration at the hands of later workers in the same fields. Of the man himself I am, to my regret, unable to speak, but his work ensures him a high place in the roll of honour of Sanskrit scholars.

E. H. JOHNSTON.

29.

We deeply regret to learn of the recent death of H.H. MaharajdhiraJa Sir Bhupindar Singh, G.C.S.I., G.C.I.E., G.B.E., of Patiala, who had been a member of this Society for twenty-seven years.

NOTES OF THE QUARTER

Attention is drawn to Rule 97, concerning the borrowing of books from the Library for the purposes other than review : " In no case shall a book be retained for a longer period than six months." Members desiring the use of books for a longer period must return them to the Librarian for examination at the expiration of that time with a suitable request. Should the book not be required it will be returned to the holder.

The quarterly numbers of the JOURNAL are forwarded to subscribers about 11th January, April, July, and October respectively. Should a volume not be received within a reasonable time after the prescribed date, notification should be sent to the Secretary as early as possible, but, at any rate, by the end of the quarter concerned. Should such notice not be received by the Secretary within six months of the first day of the quarter for which the volume has been issued, the onus cannot be admitted, and the volume cannot be replaced free of charge.

In accordance with Rule 93, the Library will be closed for cleaning and repairs throughout the month of August.

On account of the summer holidays it would be greatly appreciated if correspondence could be reduced to a minimum during the months of August and September.

Authors of articles in the JOURNAL who desire more than the twenty off-prints which are supplied gratis, are requested to apply to the Secretary before publication. The cost of the extra copies varies in accordance with the length of the article and the number of plates.

Forthcoming Events

ARCHÆOLOGICAL EXPEDITION

The following Archæological Expedition is reported to be undertaking work during the current season :—

British Museum

IRAQ.—Tal Brak, 35 miles south of Nisibin. M. E. L. Mallowan. *Collaborator*: British School of Archæology in Iraq.

XX^e CONGRÈS INTERNATIONAL DES ORIENTALISTES

The 20th International Congress of Orientalists will take place in Brussels from 5th to 10th September, 1938.

We congratulate our Director, Emeritus Professor D. S. Margoliouth, upon the dinner held in his honour in the Hall of New College, Oxford, of which he was a Fellow for fifty-seven years, in recognition of the distinguished services rendered by him as Laudian Professor of Arabic at that university.

Congratulations are also due to Sir E. Denison Ross, who has been selected to deliver the Lowell Lectures at Boston, U.S.A.

A bequest has just been made, to the Society's Library, of the Eckenstein Collection of the works of Sir Richard Burton, who was a member for many years, and whose memory is constantly honoured by the Society's Burton Memorial Lecture and Medal. The Collection was formed by the late Oscar Eckenstein, and was presented by his friend, Mr. Lewis C. Loyd.

JOURNAL OF THE ROYAL ASIATIC SOCIETY

1938

PART III.—JULY

Al-Risālat Al-Laduniyya. By Abū Ḥāmid
Muhammad Al-Ghazālī (450/1059–505/1111)

TRANSLATED BY MARGARET SMITH, M.A., D.LITT.

(Concluded from p. 200.)

CHAPTER III

ON THE DIFFERENT TYPES OF KNOWLEDGE AND ITS DIVISIONS

Know that Knowledge can be divided into two types, one religious knowledge (شرعی) and the other intellectual (عقلی), and most of the branches of religious knowledge are intellectual in the opinion of him who knows them, and most of the branches of intellectual knowledge belong to the religious code, in the opinion of him who understands them. "And he, to whom God does not commit light, has no light."¹

1. The first type of Knowledge, which is religious knowledge, is divided into two classes, (a) one of them concerned with fundamental principles (أصول), and it is the knowledge of the Unity, and this knowledge is concerned with the Essence of God Most High and His eternal attributes and His creative attributes and His essential attributes, which are set forth in the Divine Names, as mentioned. It is concerned also with the states of the Prophets and the Imams after them and the Companions. It deals, further, with the states of death and life and with the states of the Resurrection and the Summons and the Assembly

¹ Sūra xxiv, 40.

and the Judgment and the Vision of God Most High. Those who concern themselves with this type of knowledge have recourse first to the verses of the Qur'ān, which is the Word of God Most High, then to the traditions of the Apostle (may God bless him), then to intellectual proofs and analogy; and they took the premises of argumentation, syllogistic and eristic, and what belongs to them both, from the philosophers, and they placed most terms in other than their (right) place. In their expressions, they use such phrases as substance and accident and direction and consideration and demonstration and argument, and the meaning of each of these terms differs with each group, so that by "substance" the philosophers mean one thing and the Sūfis mean another, and the scholastics something else, and so on. But it is not the purpose of this treatise to verify the meaning of the terms according to the opinions of each group and we will not enter upon it.

Now these people are specialists in the discussion of fundamental principles and the knowledge of the Unity, and their title is the *Mutakallimūn*, for the name of *kalām* has become known in connection with the knowledge of the Unity. Included also in the knowledge of fundamental principles is interpretation, for the Qur'ān is one of the greatest of things, and the most eloquent and most precious. It contains many obscure and difficult passages, which not every mind can comprehend, only that one to whom God has granted understanding of His Word. The Prophet (God bless him) has said: "There is not a verse of the Qur'ān but has a literal sense and an allegorical sense, and its allegorical sense includes another allegorical meaning up to seven allegorical meanings," and in one account, "up to nine." The Prophet said also: "Every word of the Qur'ān has a moral sense and every moral sense has also a mystical sense."¹ Now in the Qur'ān God has given information about all types of knowledge, both what is manifest of existent things and what is hidden, what is small

¹ Cf. *Kitāb al-Arba'in*, p. 48, and L. Massignon, *La Passion d'al-Hallāj*, p. 704.

among them and what is great and what is perceptible and what is intelligible among them. There is an allusion to this in the Word of God, where it is stated : "There is neither a green thing nor a dry, but it is (set forth) in a clear book." ¹ And God said also : "Let them meditate on His verses and let men of understanding remember." ²

Since the subject-matter of the Qur'ān is the greatest of subjects, what commentator has done justice to it ? Or what theologian has fulfilled his responsibility to it ? Each one of the commentators enters upon the explanation of it in accordance with his ability, and embarks upon the exposition of it according to the capacity of his mind, and in accordance with the amount of his knowledge. For all of them said—and they spoke truly—that knowledge of the Qur'ān gives an indication of the knowledge of fundamental principles and what is derived from them, and religious and intellectual knowledge. Now the commentator ought to consider the Qur'ān from the point of view of the language and from the point of view of metaphor and from the point of view of the composition of the vocables : also from the point of view of the particulars of the grammar and of the usage of the Arabs and of the subject-matter of the philosophers and of the doctrine of the Sūfis, so that his interpretation comes near to the truth of things. But if he confines himself to one point of view and is content in his exposition with one science, he has not fulfilled his duty of explaining it fully : and he finds himself opposed by the evidence of faith and the establishment of the proof.

Included also in the knowledge of fundamentals is the knowledge of the traditions, for the Prophet (God bless him) was the most eloquent of Arabs and foreigners, and was a teacher to whom revelation was made by God Most High, and his intelligence encompassed all things, high and low, and beneath every one of his words, yea, every utterance of his, are to be found seas of mysteries and treasures of hints, therefore the

¹ Sūra vi, 59.

² Sūra xxxviii, 28.

knowledge of his traditions and the understanding of his sayings is a great matter and an important thing. No one is able to have a thorough knowledge of the Prophet's teaching, except by training himself to imitation of the Lawgiver, and removing distortion from his heart through the straightening effect of the law of the Prophet (God bless him).

So he who wishes to discuss the interpretation of the Qur'ān and the elucidation of the Traditions and to discuss rightly, must first gain a knowledge of the language, and secure a thorough mastery of the science of grammar and be well-grounded in the inflection and declension of Arabic, and be versed in the different conjugations. For knowledge of the language is a ladder and a staircase to all the sciences, and for him who does not know the language there is no way to the study of the sciences, for he who wishes to ascend to a roof must first set up a staircase, then after that he can ascend. Now knowledge of the language is an important means and a great staircase, and he who seeks for knowledge cannot dispense with a good command of the language, for knowledge of the language is the most fundamental thing. Knowledge of the language begins with the understanding of the particles, which are represented by the separate words, and after that comes understanding of the verbs, such as the triliteral and the quadrilateral and others. It is also incumbent upon the philologist that he should investigate the poetry of the Arabs and the worthiest of it and the most perfect is the poetry of the *Jahiliyya*, for it provides a means of discipline for the mind, and refreshment for the soul. Then, after the study of that poetry and the particles and the names, it is necessary to acquire a knowledge of grammar, for in the knowledge of the language it takes the place of the lever balance for gold and silver, and logic for the science of philosophy, and prosody for poetry, and the yardstick for clothes, and the measure for grain, for in anything which is not weighed in a balance excess and deficiency is not clear. Now the knowledge of the language is a means to a knowledge of interpretation and of the

traditions, and the knowledge of the Qur'ān and the traditions is a guide to the knowledge of the Unity, and the knowledge of the Unity is that by which alone the souls of God's servants find salvation, and there is no deliverance from the fear of the Resurrection except thereby. This, then, is an analysis of the knowledge of fundamental principles.

(b) The second class of religious knowledge is the knowledge of what is derived (i.e. from these principles), because knowledge is either theoretical or practical and the knowledge of fundamental principles is theoretic and the knowledge of their consequences is practical, and this practical knowledge includes three obligations :—

(i) The first is what is due to God, and it consists of the essentials of religious devotion, such as purification, prayer, almsgiving, the pilgrimage, the Holy War, and devotional readings ; also the observance of feast days and the Friday prayers, and what is additional to these in the way of works of supererogation and obligatory duties.

(ii) The second is what is due to one's fellow-servants, and it includes all kinds of customary usages and takes two directions :

(a) One of them includes transactions, such as buying and selling, and partnership and compensatory gifts, and the lending of money and borrowing it, and retaliation and all kinds of blood-wit.

(b) The second of them is contractual obligation, such as marriage and divorce and manumission and servitude and the law of inheritance and what is involved in these.

The term "jurisprudence" applies to these two obligations : and jurisprudence is a noble science, profitable, universal in application, necessary ; men cannot do without it because of the universal necessity for it.

(iii) The third obligation is what is due to the self, and it is the knowledge of moral qualities. Now moral qualities are either blameworthy and ought to be rejected and abandoned, or they are praiseworthy and ought to be acquired, and the

self should be adorned with them : and what is blameworthy among qualities and what is praiseworthy of them is made plain in the Word of God Most High and in the traditions of the Prophet (God bless him). He who assumed a single one of them entered Paradise.

2. As for the second type of knowledge, which is intellectual knowledge, it is a knowledge which is difficult, intricate, including what is wrong and what is right, and it is divided into three classes.

(i) The first class, which is the beginning, comprises the science of mathematics and logic. As for mathematics, it includes arithmetic and is concerned with numbers and geometry, which is the science of dimensions and figures, and astronomy, by which I mean the science of the heavenly bodies and the stars and the regions of the earth, and what is connected therewith. From it is derived the science of astrology and the determination of the times of births and horoscopes. From mathematics is derived also the art of music, which is concerned with the relation of chords.

As for logic, it is concerned with definition and description in regard to things which are apprehended by the imagination, and it investigates things from the point of view of analogy and proof, in respect of the exact sciences. For logic follows this method, beginning with the simple terms, then proceeding to the compound terms, then to propositions, then to the syllogism, then to the moods of the syllogism, then to the search for the proof, which is the end of logic.

(ii) The second class, which is in the middle, is natural science, and the natural scientist is concerned with the universe and the component parts of the world, and substances, and accidents and with motion and rest, and the states of the heavens, and action and reaction. This science gives rise to the investigation of the states of the different classes of existent things, and the types of selves, and the humours, and the number of the senses and the way in which they perceive sensible things. Then it leads to the consideration of

the science of medicine, which is the science of bodies, and infirmities and medicines and remedies, and what belongs to them. Among its branches, also, is the science of meteorology and the science of mineralogy, and the recognition of the properties of things, and it extends to the science of alchemy, which is the treatment of ores that are ailing (i.e. base metals) in the interior of mines.

(iii) The third class, which is the highest, is the investigation of existence, then its division into the self-existent (necessary) and the contingent, then the consideration of the Creator and His Essence and all His attributes and His activities, and His command and His ordinance and His decree, and His appointment of the manifestation of existent things. In addition to that it includes the consideration of the celestial beings and simple substances and the incorporeal intelligences and the perfected souls. Then comes consideration of the states of the angels and the demons, and this extends to the knowledge of prophecy and the matter of miracles (معجزات كلامات) and the conditions of thaumaturgic gifts (كرامات) and the consideration of the souls in bliss, and the state of sleep and being awake, and the stations of dreaming. From it is derived the science of talismans and enchantments¹ and what belongs to them. Now these sciences have divisions and accidents and degrees : for a clear explanation it would be necessary to give extensive proofs, but brevity is more fitting.

CHAPTER IV

THE KNOWLEDGE OF THE SŪFIS

Know that intellectual knowledge is simple in itself, but it gives rise to a composite knowledge, which includes all the states of the two simple types of knowledge, and that composite knowledge is the knowledge of the Sūfis and the Way to attainment of their mystic states. For they have a special science of a plain Way of life which combines the two types of

¹ Reading النيرجفات. The Cairo text of A.H. 1343 reads الازيجات.

knowledge, and this science includes knowledge of the mystic state and the spiritual condition ^١(الوقت) and audition and ecstasy and longing and intoxication and sobriety and affirmation and effacement and poverty and the passing-away of self ^٢(الفناء), and also saintship and discipleship and (the position of) the Shaykh and the disciple and what is involved in their states, together with spiritual illumination ^٣(الزواهد),^٢ and endowments and stations, and we will speak of these three types of knowledge in a special book, if God will. But now it is our intention only to enumerate the sciences and their different classes, in this treatise, and we have limited it and have enumerated them briefly, in order to summarize. So let him who desires more (than this) and a full exposition of these sciences betake himself to reading the books (which deal with them). Since the discourse setting forth the enumeration of the classes of science is ended, know for a certainty that each one of these arts and each one of these sciences demands a number of conditions in order that it may be impressed upon the souls of those who seek it, and after the enumeration of the sciences you must know the methods of study, for there are specific methods of acquiring knowledge, and we will analyse them.

CHAPTER V

SETTING FORTH THE METHODS OF STUDYING KNOWLEDGE

Know that human knowledge is acquired by two means :

- (i) By submission to human teaching.
- (ii) By submission to Divine teaching.

As regards the first means, it is a familiar method and a path which is easily perceived : all intelligent men acknowledge it. But as for submission to Divine teaching it is of two aspects, one of them from without and it is acquired by the

¹ For a discussion of *waqt* cf. Hujwīrī, *Kashf al-Mahjūb*, pp. 367-370.

² Cf. Hujwīrī, *Kashf al-Mahjūb*, p. 384.

acceptance of instruction, and the other from within and it is preoccupation with reflection.

(a) Now this inner reflection takes the place of study in the outer sphere. For learning is what one person gains from an individual *(الشخص الجزئي)* and the power of reflection¹ is what the soul gains from Universal Soul, and Universal Soul is stronger in influence and greater in power of teaching, than all learned and intelligent men.² Now knowledge is implanted in the souls at their beginning (i.e. when first created), with potentiality, like the seed in the earth and the gem in the depths of the sea, or in the heart of the mine : and study is the search to bring forth that thing from potentiality to actuality. For the soul of him who is taught resembles the soul of the teacher, owing to similarity of nature, and the learned man is like the sower, and the learner, in deriving profit, is like the earth, and the knowledge, with its potentiality, is like the seed, and that which is actuality is like the plant. Then, when the soul of the learner is perfected, it will be like the tree which bears fruit,³ or the pearl brought forth from the depths of the sea. Now when the bodily powers prevail over the soul the learner has need of more study, and must spend more time on it, and he must endure trouble and much weariness in the search for profit. But when the light of reason prevails over the sensible qualities, the seeker, with but little reflection, can dispense with much study, for the

¹ i.e. the power of ratiocination. Cf. *Iḥyā'*, iv, p. 364 (l. 12) : "Reflection is the beginning of—and the key to—all good . . . it is the search for the gnosis which is desired . . . as the stone strikes upon the iron and brings forth from it fire, whereby the place is illuminated and the eye is able to see after it was unseeing, and the limbs are stirred to activity, so also the flint-stone of the light of gnosis is Reflection . . . and the heart is changed because of this light . . . so the fruit of reflection is knowledge and mystic 'states'."

² Cf. Plotinus, iv, 1, 1, and *Rasā'il Ikhwān al-Safā'*, iii, p. 275, "the irradiation of the Divine Light shed upon Universal Mind and by Universal Mind upon Universal Soul and by Universal Soul upon individual souls."

³ Cf. *Mishkāt al-Anwār*, p. 135, on *الروح المكرى* : "Its characteristic is to begin from one proposition, then to branch out into two . . . the symbol for this in this world is the Tree."

receptive soul, through a single hour's reflection, gains what the unreceptive soul does not gain by a whole year's study. So some men acquire knowledge by study and some by reflection ; and study needs reflection also, for man cannot learn all particulars and universals, nor all subjects of knowledge. But he learns something and, through reflection, infers something from what has been learnt. For most of the speculative sciences and the practical arts are the result of inference by the souls of the wise, through the clearness of their understanding and the power of their thought and the keenness of their conjectures, without a great deal of study and acquisition.

For if man did not infer something through reflection from what is first known to him, the business would be prolonged for men and the darkness of ignorance would not depart from their hearts, for the soul cannot learn all that is important to it, particulars and universals, by means of study, but some part of it by study and some by vision, just as we see is customary among men. Certain things are deduced from the inner consciousness through the clearness of a man's thought ; and the practice of the learned follows this course, and by this means the foundations of the sciences are laid. So that the geometrician does not learn all that he will need for the whole of his life, but he learns the universal principles of his science and its axioms, then after that he infers and compares. So also the physician is not able to learn in detail all the diseases of persons and their remedies, but he reflects upon what is known to him as a whole, and cures each individual according to his constitution. So also the astrologer studies the general laws of the stars, then he reflects and comes to the different determinations (i.e. horoscopes). So it is with the jurisconsult and the man of letters, and in the same manner up to the rare works of art, for one invented a musical instrument, such as the lute, by means of his reflection, and another deduced from that instrument another instrument. So likewise all the arts, bodily and sensual, the first of them

are acquired by study and the rest are the result of reflection. And when the door of thought has been opened to the soul, it has learnt how to reflect and how to return by way of conjecture to what was sought, and this man's heart is expanded and his understanding is opened and what is in his soul of potentiality becomes actuality, without excessive search or prolonged toil.

(b) The second means, which is the Divine teaching, is of two types :—

(i) Divine revelation (الوحي), which means that when the soul has perfected itself the defilement of human nature passes away from it and the filthiness of greed and desire, and its regard is detached from the lusts of this world, and its links with transient desires are severed, and it turns towards its Creator and Master and takes hold upon the bounty of its Author and relies upon His grace and the outpouring of His Light. Then God Most High, by His most excellent favour, welcomes that soul with full acceptance and looks upon it with (His) Divine regard, and He takes from it a tablet, and from Universal Soul a Pen which inscribes upon it all His knowledge. Then Universal Mind becomes the teacher and the sanctified soul the taught, and all knowledge is acquired by that soul and all images are impressed upon it without study and reflection.¹

This is confirmed by the Word of God Most High to the Prophet (may God bless him), "And He made you to know what ye did not know,"² etc. Now the knowledge of the prophets is of a more honourable degree than all the sciences of mankind, for it is received directly, without mediation, from God Most High, and this is made plain in the story of Adam (upon him be peace) and the angels. For they studied

¹ Cf. Plotinus, v, 3, 3. "It has been strengthened still towards the perception of all that is good by the irradiation of the Intellectual Principle upon it: for this pure phase of the soul welcomes to itself the images implanted from its prior."

² Sūra ii, 240.

all their lives and, by different means, acquired much knowledge until they became the most learned of the creatures and the most understanding of existent things. Now Adam (upon him be peace) was not learned, because he had not studied and did not look to any teacher. So the angels vied with one another in boasting, and were arrogant and magnified themselves, and they said : "We sing Thy praises and we bless Thy Name ; and we know the real meaning of things." Then Adam (upon him be peace) returned to his Creator's door and, having detached his heart from all created things, came to seek help from his Lord Most High and He taught him the names (of all things). Then He brought them forth to the angels and said : "Declare unto Me the names of these, if ye speak truly," and their state was diminished in Adam's sight and their knowledge lessened and the ship of their pride was broken and they were submerged in the sea of impotence. They said : "We have no knowledge but what Thou hast taught us," and God said : "O Adam, tell them their names."¹ Then Adam (upon him be peace) informed them concerning the hidden things of knowledge and the mysteries of the Divine Command (مراعا).²

In the view of intelligent men it is established that the esoteric knowledge derived from revelation is greater and more certain than the sciences which are acquired (i.e. by study). Now the knowledge which is revealed came to be the heritage of the prophets and the privilege of the apostles, and God has kept the door of revelation closed since the time of our lord Muhammad (may God bless him), who was the apostle of God (His blessing upon him) and the last of the prophets. He was the most learned of men and the most eloquent of Arabs and

¹ Sūra ii, 29 ff.

² Cf. *Iḥyā*, iii, pp. 328, 329. "There are two worlds, the world of *amr* and the created world . . . every being devoid of quantity and dimension belongs to the world of *amr*"; and iv, p. 23 : "The world of *amr* is what prevails over the created world." Cf. also *Kitab al-Arba'in*, pp. 53, 54. "Sensible things have no real existence: real existence belongs (only) to the world of *amr* and *malakūt*." Cf. also *Rawdat al-Tālibīn*, p. 176.

foreigners, and he used to say : " My Lord has educated me and has instructed me well." He said also to his community : " I am the most learned of you and the most God-fearing." But his knowledge was more perfect and nobler and greater only because it was the result of the Divine teaching, and he never busied himself with human learning and teaching. God said : " One mighty in power taught him." ¹

(ii) The second type is Inspiration (الْإِلَامُ) and Inspiration is the awakening, by Universal Soul, of the individual, human soul, in proportion to its purity and its receptivity, and the degree of its preparedness. Now Inspiration follows upon Revelation, for Revelation is the clear manifestation of the Divine Command, and Inspiration is the hinting thereat. The knowledge which is derived from revelation is called prophetic knowledge, and that which is derived from inspiration is called knowledge from on high (عِلْمُ الْأَنْبِيَا). It is that which is attained without mediation between the soul and its Creator ; it is, indeed, like the radiance from the Lamp of the Invisible, shed upon a heart which is pure, at leisure, subtle. That is because all knowledge is attained and known in the substance of the Primal Universal Soul, (which is present in incorporeal, primal, pure substances), through its relationship to the First Intelligence (Universal Mind), which is like the relationship of Eve to Adam (upon him be peace).

It has been made clear that Universal Mind is nobler and more perfect and stronger and nearer to the Most High Creator than Universal Soul,² and Universal Soul is nobler and more

¹ Sūra liii, 5.

² Cf. Plotinus, v, i, 6. " The soul being an utterance and act of the Intellectual-Principle, as that is an utterance and act of The One," and v, 9, 4. " The Intellectual-Principle is at once something other and something more powerful than Soul and the more powerful is, in the nature of things, the prior."

Cf. also *Rasā' il Ikhwān al-Safā*, " The relationship of Soul to Mind is like the relationship of moonlight to the light of the sun, and the relationship of Mind to the Creator is like the relationship of sunlight to the sun itself," iii, p. 8. Cf. Introduction, p. 179 above.

receptive and more honourable than the rest of the creation, and from the outpouring (افضحة) of Universal Mind emanates revelation, and from the irradiation of Universal Soul comes inspiration. Now revelation is the adornment of the Prophets and inspiration the ornament of the saints, but, as regards revealed knowledge, as the soul is below the intelligence, and the saint below the prophet, so also inspiration is below revelation, for it is weak in comparison with revelation, strong in comparison with vision¹ (رُؤيا), and inspired knowledge is possessed by both prophets and saints. But revealed knowledge belongs exclusively to the apostles and ceased with them, as it belonged to Adam and Moses (upon them both be peace) and Abraham and Muḥammad (God's blessing be upon both) and others beside them of the apostles, and there is a distinction between the apostolate and the prophetic mission. For prophecy is the reception, by the sanctified soul, of the true meanings of things known and understood, from the substance of Universal Mind, and the apostolate is the conveyance of these things, known and understood, to those able to profit thereby, who are fit to receive them.² And it may be that some soul is fitted to receive (this knowledge), but it is not transmitted to it, on account of some hindrance or some reason.

So, then, knowledge from on high belongs to the prophets and the saints, as it did to Khidr (upon him be peace), for God said of him: "And We taught him knowledge from Ourselves."³ Also the Commander of the Faithful, 'Alī b. Abū Ṭālib (may God be gracious unto him), said: "The Apostle made his tongue enter my mouth⁴ and a thousand gates of knowledge were opened unto me, and with each gate another

¹ i.e. in sleep. Cf. Introduction, pp. 178 ff. above.

² Cf. 'Abd al-Razzāq on the Prophet as the one who can give information concerning the Divine Realities, that is, the Essence of the Godhead and His Names. Cf. also p. 361 above, note (2).

³ Sūra xviii, 64.

⁴ The Cairo texts read: "I made my tongue enter into my mouth, i.e. I kept silence."

thousand gates." He said also : " If a cushion were placed for me and I were to sit upon it I would pass judgment upon the followers of the Tawrāt, by means of their Tawrāt, and on the followers of the Gospel, by means of their Gospel, and on the followers of the Qur'ān, by means of their Qur'ān." Now this rank is not attained by mere human study, but a man is adorned in this rank by the power of the knowledge from on high. He said also (may God be pleased with him), speaking of the age of Moses (upon whom be peace) : " The exposition of his book amounts to forty loads and if God would give me leave to expound the true meaning of the *Fātiha* I would pursue my way therein until it reached the like of that, I mean forty heavy loads." Now this amplitude and extensive capacity and this opening of the gates of knowledge can only be inspired, Divine, heavenly.

Therefore, when God wishes well to one of His servants, He raises the veil between Himself and the Universal Soul, which is the Tablet¹ and the mysteries of certain created things are manifested in it and the spiritual meanings of those created things are engraved upon it and that Soul explains them as it wishes, to whom He wills among His servants.² For true wisdom is attained by knowledge from on high, and so long as a man does not attain to this rank he is not wise, for wisdom is one of the gifts of God Most High. " He giveth wisdom to whom He wills and he to whom wisdom is given, is given much good, but none bear it in mind save the wise of heart."³ And that is because those who attain to the rank of inspired knowledge, having no need of much acquisition and the weariness of learning, study little and learn much, and their toil is light and their rest is long.

Know that when revelation was cut off and when the door

¹ Cf. pp. 196, 363 above.

² Cf. *Rasū'l Ikhwān al-Ṣafā'*, iii, p. 275. " All good things come from the grace of God and the irradiation of His light upon Universal Mind and from Universal Mind upon Universal Soul, and from Universal Soul upon the material forms which individual (human) souls see in the corporeal world."

³ Sūra ii, 272.

of the apostolate was closed, men had no need of apostles and the manifestation of the summons (to a new faith), after the authentication of the proof and the perfecting of the faith, as God Most High said : “ To-day have I perfected your religion.” ¹ And it is not the part of wisdom to manifest additional benefit without need. But the door of inspiration is not closed, and the help of Universal Soul is not cut off, because of the continual necessity of human souls and their need for strengthening and renewal and reminder. For men have no need (now) of the apostolate and the call, and they have need of reminder and admonition, because of their absorption in these temptations and their obstinate persistence in these lusts. For God Most High closed the door of revelation, whereby His servants were guided, and He opened the door of inspiration, out of His mercy, and ordered affairs aright and placed souls in their different ranks, so that they might know that God shows loving kindness to His servants and He gives sustenance to whom He will, without price.

CHAPTER VI

ON THE RANKS OF THE SOULS IN THE ACQUISITION OF KNOWLEDGE

Know that knowledge is implanted within all human souls and all of them are capable of receiving all types of knowledge, only a soul may miss its appointed share of that, because of something intervening or something occurring to it unexpectedly from outside. As the Prophet (God bless him) has said : “ Men were created orthodox believers (حنفاء) and myrmidons of Satan led them astray.” The Prophet said also : “ Every child is born in natural religion (على النطرة), etc.” ² So the rational human soul is worthy to be enlightened by Universal Soul and is fitted to receive intelligible images

¹ Sūra v, 5.

² “ Then his parents make him a Jew or a Christian or a Magian.”

from it, by the power of its original purity and its primal innocence,¹ but some souls have become diseased in this world and are prevented from apprehending the true meaning of things, by reason of various infirmities and different accidents. Some of them remain in their pristine health, without infirmity or corruption, and receive (i.e. from Universal Soul) as long as they remain alive. Now the souls which are perfect (مُكَفِّلٌ) are the prophetic souls, which are receptive of revelation and the (Divine) strengthening, and they are able to manifest miracles and supernatural power in this world of generation and corruption. For those souls continue in their pristine perfection and their constitutions have not been changed by the corrupting effect of infirmities and the defects of accidents. So the prophets became the physicians of souls,² and those who summoned mankind to the perfection of their created nature (i.e. to the true faith).

But as for the souls which are diseased in this lower world, they fall into different classes: some of them, through infirmity due to their abode (i.e. in this world) have received a weak impression (from Universal Soul), and the clouds of forgetfulness have affected their minds, and so they occupy themselves with study, and they seek to recover their original health, and their infirmities disappear by the application of the simplest of remedies, and the clouds of their forgetfulness are dispersed by a very little recollection. But some of them study throughout their lives and occupy themselves with learning and seek their first state of perfection, and their infirmity does not disappear by the use of the simplest remedies, nor do the clouds of their forgetfulness disperse by means of very little recollection. Then some of them study all their lives and occupy themselves in learning and trying to recover perfection,

¹ Cf. Plotinus, v, 3, 3.

² Cf. the teaching of al-Muhsibī, quoted in my *Early Mystic of Baghdad* p. 237: "God commanded them to bring relief to those who suffer (i.e. from sickness of the soul) and He said: 'O ye who are My witnesses, if any come to you sick, because he has fallen away from Me, heal him.'"

all their days, and do not understand anything, because of the corruption of their natural dispositions, for their disposition is corrupt and not receptive of the cure. And some of them remember and (then) forget, and they discipline and humiliate their souls and they find a little light and some feeble illumination. Now this distinction has appeared only because the souls were pre-occupied with this world, and their detachment from it is in proportion to their strength and their weakness, like the healthy person who has fallen sick and the sick person when he has become well. When this impediment is removed the souls acknowledge the existence of knowledge from on high and realize that they were wise in their original state and pure when they were first created, and their ignorance arose only through their association with this gross body and their continuance in this abode of trouble and place of darkness.

Now the souls do not seek, through study, to create knowledge which is non-existent, nor to bring into existence an intelligence which is lacking, but they seek for the restoration of the original, innate knowledge which has been lost, for infirmity has come upon them through their preoccupation with the adornment of the flesh and setting it upon a sure foundation and putting its basis in order. Now the loving father, when he undertakes the training of his child and occupies himself with its concerns, forgets all (other) affairs and is content with one affair, and that is the affair of the child. So also the soul, because of its passionate love and pity, has been concerned with this edifice (i.e. the body) and has busied itself in building it up and training it and in solicitude for its affairs. So the soul became submerged in the sea of human nature, because of its weakness and its individuality and, throughout its life, it had need of study, in order to seek for the recollection of what it had forgotten, being desirous of the recovery of what it had lost. For study is only the return of the soul to its own proper substance and the bringing forth to actuality of that which is contained (in potentiality) in its own

inner self, seeking thereby to perfect itself and to attain to its true happiness.

But when souls are so weak that they do not follow the right road to the realization of their true nature, they attach themselves, and have recourse, to a master who is compassionate and wise and ask for his succour, so that he may assist them in the search for what they desire and that for which they hope, like the sick person who is ignorant of what will cure him, but he knows that good health is praiseworthy and desirable, and he has recourse to a compassionate physician and exposes his state to him and takes shelter with him, so that he may heal him and make his sickness to cease from him. We have sometimes seen a learned man fall sick with a particular infirmity, affecting, for instance, the head and the breast, so that his soul shuns all knowledge and he forgets what he has learnt and it becomes confused to him, and all that he acquired in his past life and his days that are gone remains hidden within his memory and his recollection. Then, when he has recovered and health has returned to him, he ceases to be forgetful and the soul returns to what it had learnt and then it remembers what it had forgotten in the days of sickness. So we learnt that the knowledge had not disappeared, it was only forgotten, and there is a distinction between obliteration and forgetfulness. For obliteration is the disappearance of what is engraved and impressed, and forgetfulness is the obscuring of impressions, and it is like the mists or clouds which veil the light of the sun from the eyes of those who look, not like the sunset, which is the departure of the sun from (a position) above the earth to (one) below it.

So, then, the soul's preoccupation with study is the removal of the infirmity which has befallen it, from the substance of the soul, in order that it may return to what it knew in its original state and what it understood in its pristine purity. And when you have understood the cause and purpose of study and the real nature of the soul and its substance, then know that the soul which is sick needs to study and to spend

its life in acquiring knowledge. But as for the soul which realizes its sickness and whose infirmity is light and its evil trivial and its clouds thin, and its natural disposition sound, it has no need for excessive study and long toil. On the contrary, a very little consideration and reflection suffices for it, because it is restored thereby to its original state, and it returns to what it was at first and realizes itself and contemplates the mysteries within it and brings the potentiality which it possesses to actuality, and what was implanted within it becomes an adornment to it, and its affair is completed and its condition made perfect, and it comes to know many things in a very few days. Then it interprets what is known, in the right way, and becomes wise, perfect, articulate (أَكْتَمِي), and seeks light by approaching Universal Soul, which pours forth of its abundance, when it encounters the individual soul. And the latter becomes assimilated¹ to it by way of passionate love, in the beginning, and it cuts off the root of envy and the beginnings of contempt and turns aside from the vanities of this world and its pomp, and when it has reached this stage it has become wise and has attained to salvation and to victory. And this what all men desire.²

CHAPTER VII

ON THE REAL MEANING OF KNOWLEDGE FROM ON HIGH AND THE MEANS OF ATTAINING IT

Know that knowledge from on high is the irradiation of the light of inspiration, and inspiration comes after completion (تَسْوِيَة), as God Most High said : "By a soul and Him Who fashioned it completely,"³ and completion is the making

¹ Cf. *Theology of Aristotle*, p. 85 : "It becomes assimilated to Universal Soul and becomes like it in conduct and manner of life; there is no distinction between them or difference." And *Rasā'il Ikhwān al-Ṣafā'*, iii, p. 274.

² Cf. Plotinus, vi, 7, 22. "The soul taking that outflow from the Divine is stirred . . . it becomes Love . . . when there enters into it a glow from the Divine, it gathers strength, awakes, spreads its wings."

³ Sūra xci, 7. Cf. *Mađnūn al-Ṣaghīr*, p. 2.

sound of the soul and its return to its original disposition, and this return is accomplished by means of three things :—

(a) The study of all branches of knowledge and taking the greatest share of most of them.

(b) Genuine self-discipline and true meditation, for the Prophet (God bless him) alluded to this truth, saying : “ To him who acts in accordance with what he knows, God grants knowledge of what he does not know.” The Prophet also said : “ To him who worshipped God in sincerity for forty mornings, God made springs of wisdom, arising from his heart, to be manifested by his tongue.”

(c) Reflection, for when the soul has studied and is disciplined through knowledge and then has reflected on what was known to it, in accordance with what reflection requires, the door of the Invisible is opened to it, just as, to the merchant who disposes of his goods, in accordance with what disposal requires, the gates of profit are opened, and if he followed the wrong course, he would fall into the dangers of loss. So he who reflects, since he follows the right way, becomes one of those who understand, and a window into the Invisible World is opened in his heart, and he becomes wise, perfected, understanding, inspired, victorious. As the Prophet (God bless him) said : “ To reflect for one hour is better than seventy years of devotion.”¹ But we will enumerate the conditions of reflection in another treatise, since the exposition of Reflection, and how it comes about, and its true meaning, is an obscure matter requiring further elucidation, which will be facilitated, by the help of God Most High.

And now we will bring this treatise to an end, for in these words is enough for those to whom they are directed, and “ he to whom God does not appoint light will have no light”. God is the Lord of those who believe and in Him we should put our trust. May God bless our lord Muḥammad and his family and his companions, and give them peace. For God is our

¹ Cf. al-Muḥāsibī on Reflection. *An Early Mystic of Baghdad*, pp. 99 ff.

Sufficiency and how excellent a Protector is He, and there is no might nor power save in God the Exalted, the Almighty, and in Him is my confidence at all times. Praise be to God, the Lord of all created things.

The Instructions of the East India Company to Lord Macartney on his Embassy to China and his Reports to the Company,¹ 1792-4. Part II: Letter to the Viceroy and First Report.

EDITED BY EARL H. PRITCHARD

(Continued from p. 230.)

[Document No. 2]

LETTER FROM THE CHAIRMAN OF THE EAST INDIA COMPANY
TO THE VICEROY, 27TH APRIL, 1792²

The Honorable the President, and Chairman, of the Honorable the Court of Directors, under whose orders, and authority the Commerce of Great Britain is carried on with the Chinese Nation at Canton, to the high and mighty Lord, the Tsontock [*Tsung-tu*], or Viceroy, of the Provinces of Quantong [Kuangtung] and Kiang-si, Greeting.

These are, with our hearty Commendations, to acquaint you, that Our most Gracious Sovereign, His most excellent Majesty George the Third, King of Great Britain, France, and Ireland, &c. &c. whose fame extends to all parts of the World, having heard that it had been expected his subjects settled at Canton in the Chinese Empire should have sent a Deputation to the Court of Pekin, in order to congratulate

¹ The editor is indebted to the India Office for kind permission, obtained through Mr. W. T. Ottewill, Superintendent of Records, to publish the two documents which appear in this article.

² MSS. India Office, *China: Macartney Embassy*, xci, 333-6. Another copy of this letter in English is to be found in MSS. Cornell, *Macartney Correspondence*, iv, No. 115, and a Latin copy together with an English translation (of recent date) are to be found in MSS. Cornell, *Collections of Monsieur Isaac Titsingh*, "Lettre de creance de Macartney." This letter, signed by Francis Baring, is identical with the original draft made by Lord Macartney and transmitted to Henry Dundas on 17th March, 1792 (MSS. India Office, *China: Macartney Embassy*, xci, 171-2). Part of it is printed in G. L. Staunton's *An Authentic Account . . .*, i, 44-6.

the Emperor on his entering into the eightieth year of his Age, and that such Deputation had not been immediately dispatched, His Majesty expressed great displeasure thereat.¹ And being desirous of cultivating the Friendship of the Emperor of China, and of improving the connection, intercourse and good correspondence between the Courts of London and Pekin, and of increasing and extending the Commerce between their respective subjects, resolved to send his well-beloved Cousin and Counsellor the Right Honorable George Lord Macartney, Baron of Lissanoure,² one of his most honorable Privy Council of Ireland and Knight of the most honorable Order of the Bath, and of the most ancient and royal Order of the White Eagle, a nobleman of high rank and quality, of great virtue, wisdom and ability, who has already filled many important offices and employments in the State, as his Ambassador Extraordinary and Plenipotentiary to the Emperor of China, to represent his Person, and to express in the strongest terms the satisfaction he shall feel, if this mark of his attention and regard, serves as a foundation to prove the sincerity of his sentiments, and of his earnest wishes to promote the advantage and interest of the two Nations of Great Britain and China, and to establish a perpetual harmony and alliance between them.

The Ambassador with his attendants will very soon set out on his Voyage; and having several presents for the

¹ In October, 1789, the Hoppo (O-êrh-têng-pu 額爾登布), Imperial Customs officer at Canton, and Viceroy (Fu K'ang-an 福康安 [d. 1796]) had proposed to the supercargoes that a deputation be sent from the foreign community at Canton to congratulate the Emperor upon his 80th birthday. Although one of the supercargoes agreed to go, the Canton officials said nothing more about the matter, and the deputation was never sent (*Morse, Chronicles*, ii, 177-8, 182).

² At the time this letter was written Lord Macartney was still a Baron. He became Viscount Macartney of Dervock, in the county of Antrim, Ireland, on 28th June, 1792. As a result of an arrangement made before he sailed for China he was made the Earl of Macartney in the county of Antrim, on 1st March, 1794 (Robbins, op. cit., pp. 179, 413).

Emperor of China from the King of Great Britain, which from their size, nice mechanism, and value could not be conveyed through the interior of the Country to so great a distance as from Canton to Pekin, without the risk of much damage and injury, will proceed directly and without delay in one of His Majesty's Ships properly accompanied, to the Port of Tien-sing, in order to mark his particular respect, by approaching in the first instance as near as possible to the residence of the Emperor of China.

We request therefore that you will please to convey this information to the Court of Pekin, trusting that the Imperial Orders and Directions will be issued for the proper reception of the King of Great Britain's Ships, with his Ambassador and his Attendants on board them, as soon as they shall appear at Tien-sing, or on the neighbouring Coasts.

And so praying the Almighty God to grant you all happiness and long life, and to take you under his heavenly protection, We bid you heartily farewell.

Given at London the 27th day of the Month of April in the year 1792 of the Christian Aera.¹

(Signed) FRANCIS BARING.

¹ The original of this letter together with a Latin version were presented by the Secret Committee at Canton (Henry Browne, Eyles Irwin, and William Jackson) to the Governor of Kuangtung (Kuo Shih-hsun 郭世勳 [勳] and the Hoppo (Sheng Chu 盛住) on 10th October, 1792. The Viceroy was still the Fu K'ang-an mentioned in note 1, page 376 of this *Journal*, but he was absent in Tibet at the time conducting a campaign against the Goorkhas of Nepal. The letter together with a memorial were forwarded to Peking by Kuo Shih-hsun. See Pritchard, *Crucial Years of Early Anglo-Chinese Relations* (Pullman, Washington, 1936), pp. 312-15, and Liang T'ing-nan 梁廷柂, *Yüeh Hai-kuan Chih* 粵海關志 (Canton ?, 1838), Ch. 23, pp. 3-4. The authorship of this last work is sometimes attributed to Yü K'un 豫堃 (預坤), who was Hoppo or Superintendent of Customs in 1838, because his name appears on the title-page. In an article in the *Ling-nan Hsiueh-pao* 嶺南學報 (iv [April, 1935], 138), dealing with Liang T'ing-nan's works, Sinn Yuk-ching (Hsien Yü-ch'ing) 洗玉清 describes the *Yüeh Hai-kuan Chih*.

[Document No. 3]

LORD MACARTNEY'S FIRST REPORT TO THE EAST INDIA COMPANY¹*Canton, December 23d 1793.*

To the Chairman and Deputy Chairman
of the Honorable East India Company

Gentlemen

From the neighbourhood of Han-chou-foo [Hangchow], which is about midway between Pekin and Canton, I wrote to Mr. Dundas Secretary of State a detailed account of my principal transactions in China to the 11th of last month.² It was the first opportunity that offered of any communication with Europe, since I opened my commission. Captain Mackintosh was then allowed to go directly to his ship [the *Hindostan*] lying at Chusan.³ Some of your other vessels might have been ready to sail from Canton after his arrival there and before mine, as I was to travel by a more tedious route in Company with the [New] Viceroy [Ch'ang Lin, 長麟], of that Province. I therefore then addressed a short letter⁴ to you chiefly for the purpose of referring you to my

¹ MSS. India Office, *China : Factory Records*, xx, for original, and *China : Macartney Embassy*, xcii, 369-372, for a duplicate. Part of it is published in Bannister, op. cit., pp. lxi-lxxviii. The letter was received in England on 19th July, 1794, by the Swedish ship *Sophia Magdalena* and was read before the Court of Directors on 23rd July. As there is practically no paragraphing throughout the letter, it has been introduced for convenience sake.

² MSS. India Office, *China : Factory Records*, xx, for original, and *China : Macartney Embassy*, xcii, 31-116, and xciii, 59-90 of Part 3, for duplicates. Efforts are being made to publish this important dispatch.

³ Captain Mackintosh had accompanied the Embassy to Peking and Jehol and had been refused permission to precede the Embassy to Chusan, where the *Hindostan* had gone after unloading the presents near Tientsin. The *Hindostan* proceeded directly to Canton after Captain Mackintosh returned to her.

⁴ This short letter, dated Han-tchou-fou, 10th November, 1793, is not of much importance. It refers the Chairs to Macartney's dispatch to Henry Dundas, indicates that he has taken notes upon the transactions of each day which he will ultimately present to the Chairs, and concludes, "I have

dispatch to Mr. Dundas, in the persuasion that he would communicate to you whatever interested the affairs of the Company under your immediate direction. I now seize the first occasion, as becomes me, of acknowledging your letter of instructions of the 8th of September, 1792, when you can best judge how far I have endeavoured to conform my conduct to them.

You justly considered that "the first and most important object was neither to impair nor injure the actual situation of the Company, thereby checking those prospects which were decidedly in view". The Embassy was certainly not exempt from the risk, attending all considerable undertakings, of leaving matters, in case of failure, worse than they had been found: and in the present instance, beside the obstacles to our success which were possible to foresee, from the opposition and intrigues of rival Companies trading to China,¹ of the Canton Officers and merchants, and from the suspicions and jealousies of the Court of Pekin, on account of our Indian Possessions, all which were observed upon in Mr. Dundas's instructions, other difficulties occurred out of the reach of probability, and some beyond all human foresight. It was not to be foreseen that while our Troops were really employed

the strongest assurances that our trade with China will derive essential benefit from the Embassy, and we have obtained such information of the wants and habits of the Northern people of this country, as may lead to an considerable export of goods for their consumption by the way of Canton, till Time shall produce a more immediate communication with them. The measure therefore will prove to have been laid on the firm foundation of national wisdom, which looses no probable chance of enriching & aggrandizing the state by the extension of its reputation & commerce" (MSS. India Office, *China: Macartney Embassy*, xcii, 27). Ch'ang Lin the new Viceroy of Canton joined the Embassy near Hangchow and escorted it overland to Canton. For information about the Canton officials of this period see the *Yüeh Hai-kuan Chih* (Annals of the Kuangtung Customs), Ch. 7.

¹ A Swedish agent in London proposed to his government a scheme to cause the failure of the Embassy, and the Dutch Chief at Canton was somewhat opposed to the Embassy at first, but so far as can be determined no actual steps were taken to injure the Embassy (Pritchard, op. cit., pp. 298, 319, 323-4).

in the Peninsula of India against Tippoo Sultaun [Tipu Sultan of Mysore], the Chinese should fancy we were assisting their Enemies in Thibet, feeling tho concealing their alarm and resentment for such a supposed procedure.¹ It was not likely that their aversion to the revolution in France should so suddenly indispose them against any connexion with the Western world, and it was not natural to expect that the Portuguese, whom we take every occasion to assist and protect in Europe, and who have no commercial competition with us in this Country, should suffer their religious bigotry and local jealousy, to operate upon their conduct to our prejudice.² Having such difficulties to encounter, all of which were not to be surmounted but by the gradual operation of time, aided by much prudent management, your admonition became necessarily of the first consequence in my eyes.

I felt, under circumstances of strange and inconsistent conduct in particular instances on the part of the Chinese relative to my negotiation, as well as sometimes of personal provocation to myself, the absolute necessity of uncommon caution and forbearance on my part. By these means not only the main object of your instructions has been perfectly secured ; but the way to attain the prospects before you is rendered clearer, and the prospects themselves enlarged. Not only the Emperor declared at the time when he was under impressions the least favorable to our views, that he would treat the English Merchants trading to Canton with

¹ While Lord Macartney was at the Emperor's Court one of the most persistently unfriendly officials was Fu K'ang-an, titular Viceroy of Canton, who had recently been in Tibet in command of a Chinese army operating against an invasion of the Goorkhas from Nepal. He is supposed to have maintained that the English were helping the Goorkhas, whereas an agent of Lord Cornwallis had actually mediated between the Goorkhas and Chinese (Pritchard, op. cit., pp. 332, 336, 372-3).

² All of the Portuguese missionaries at Peking, especially Joseph Bernard d'Almeida, were supposed to have been unfriendly towards the Embassy, but it is unlikely that they did it any special harm (Pritchard, op. cit., pp. 330, 333-5, 381).

justice and benevolence,¹ but he has since signified by one of his Ministers [Sung Yün 松筠], who accompanied me as far as Han-chou-foo [Hangchow], and also by the new Viceroy [Ch'ang Lin] of Canton, who was chiefly with me afterwards, that a particular enquiry should be made into the duties and fees actually levied upon the English trade, in order to remove every kind of extortion, and that such indulgence should beside be shewn, as might be consistent with the laws and customs of the Chinese. It must, however, take some time and much previous communication before the Viceroy, to whom everything at Canton is entirely new, can form regulations in our favor. It is therefore possible that their effect will not be felt before the arrival of the Ships of the next season.

It might have been indeed attended with some risk, as you justly observe, to press for any regulations unless under very favorable circumstances; no opportunity however more favorable could have offered for effecting a relief to our Commerce at Canton from the growing grievances to which it had been subject than a change in the Government of the Province by the appointment of a man [Ch'ang Lin] of an upright and disinterested, tho of a slow and cautious Character, and who thinks the honor of his Country concerned in doing us justice. This disposition of the Vice-roy will no doubt be greatly aided by the effect produced upon the minds of the Natives in general in consequence of the very distinguished honors paid everywhere to the Embassy by orders of the Court, and our gracious reception at least in point of form, by the Emperor. This circumstance cannot fail to impress both Mandarins and People with a higher respect and consideration for the English name, than they had hitherto entertained, and the circumstance of the

¹ See the Emperor's reply of 3rd October, 1793, to the King's letter (E. Backhouse and J. O. P. Bland, *Annals and Memoirs of the Court of Peking* [London, 1914], pp. 324-5), and his reply on 7th October, 1793, to Lord Macartney's requests, printed in Morse, *Chronicles*, ii, 250-1.

communication being more opened with Pekin for our representations,¹ may check the dispositions of the Canton Officers to impose, and as you mention in your instructions to your Commissioners there, may produce more permanent advantages than any positive orders on the part of the Emperor, the execution of which might be evaded.

Beside the advantages thus resulting from the Embassy in the mode of carrying on your trade, the novelty of such a spectacle at Pekin, and thro' the whole country, together with the splendor that attended it, attracted universal attention. The very materials of our dress and furniture became objects of consideration. The opportunity of occasionally distributing presents of our manufactures,² answered the purpose of disseminating a taste for them, and it was not less singular than pleasing to observe the avidity with which some even of our slightest articles were received by persons to whom the price of them, at any rate of profit, would have been no object.

I am convinced that, by proper management and encouragement in the beginning, our exports to China may by degrees be brought to exceed the amount of our present imports from thence. Already woolen [sic] cloth and watches seem to be indispensable necessities to every Gentleman at Pekin, and even to his Principal attendants. Beside such woollens

¹ On the trip to Canton Lord Macartney received from Ch'ang Lin what he interpreted as an invitation to open a correspondence between Peking and London and to send a later Embassy. As a result he gave a note of compliment to Ch'ang indicating the desire of the English to continue the correspondence. This was forwarded to Peking and an Imperial reply sent down giving permission to send letters and pay tribute in the future (Pritchard, op. cit., pp. 356-8).

² Besides the presents given to the Emperor, numerous articles of British manufacture were given to the Viceroy of Chihli (Liang K'êng-t'ang 梁 肯 堂), the Governor of Kiangsi (Ch'en Huai 陳淮), Van and Chou (the two subordinate conductors of the Embassy), and to at least ten other minor officials who accompanied the Embassy. The articles distributed included watches, woollens, leather goods, cutlery from Birmingham and Sheffield, sword blades (especially Gill's from Birmingham), spectacles, and firearms (MSS. Cornell, *Macartney Correspondence*, Nos. 347, 349, 354).

as have hitherto been sent thither, I conceive that no inconsiderable quantity of what is called fleecy hosiery [woollens having a fleece-like nap] would find a vent in the Northern Provinces, together with any other manufacture of wool that in warmth could supply the use of furs, without being so expensive. The Emperor has been pleased to allow his Courtiers to appear before him dressed in woollen, instead of silk or furs; a circumstance which must not inconsiderably increase the consumption of those of the finer sort. I think it not impossible that a remission may be obtained in time of the transit duty and fees exacted upon our Goods in passing from the Southward to the Northward of the Empire, amounting to about ten per cent, and which would certainly encrease very much the sale particularly of the inferior woollens; and thus answer the purpose of the reduction in their original price, which has been proposed by the Canton Merchants.

I shall here observe that the Tabbinets which were very carefully put up among other presents, arrived perfectly free from damage; but that species of Irish manufacture which has the least proportion of silk in its texture, appears the most likely to answer here, being most different from the manufactures of the Country.¹ The wear even of linen might by some be preferred to that of Cotton, and the finer patterns of the latter stuff from Manchester² would be probably purchased for the women, for whom the Men seem at all times here anxious to procure ornaments of every kind, especially earrings and necklaces of different coloured stones or glass, or of gold, or gilt.

¹ For a reference to Tabinet see *JRAS.*, April, 1938, p. 223. Experimental shipments of Irish linens in 1794–5 and 1795–6 were not approved and were disposed of by the Hong merchants in Manila.

² Experimental shipments of Manchester cotton goods were made in 1786–7, 1788–9, and 1790–1, the latter of which sold at a slight profit, but as the Hong merchants did not approve of them no more were sent (*Morse, Chronicles*, ii, 120, 152, 179–180; *Pritchard, op. cit.*, p. 161). In general the Company did not favour the introduction of manufactures of the new industrial towns in the north of England.

Glass in all its forms and applications is well calculated to hit the Taste of the Chinese, and might be brought into general use amongst them, especially what could be afforded at moderate prices ; and a vast variety of our hardware would be exceedingly grateful to them, their own being so very much inferior and when the number of Consumers in so vast and populous an Empire is considered there are few articles so low priced when singly taken, as collectively to be insignificant and when demanded by millions they rise to be of value and cease to be below the notice even of a great commercial Company. The business likewise, might easily be conducted so as not at all to interfere with any private trade allowed to the Officers of the Company's Ships.¹

In general, I have found no people more curious, more greedy after novelty, or more eager to encrease their personal convenience than the subjects of this Country. They soon perceive the preference due to the new object presented to them before whatever had hitherto supplied its place among themselves. Thus their Secretaries and Clerks, as soon as they saw our European Paper especially that sort which is pressed smooth for the pen or pencil to move easily upon it, were always desirous to use it, not only on account of its more brilliant whiteness but as being much less liable to tear than chinese paper ; and a ream of our paper was found to be a very acceptable present to a Mandarine.²

I dare say such stationery as I have described, when once generally known would be in demand in China. But the introduction of this and every other article must depend upon the arrangements to be made with the native merchants of

¹ In general the Company did not wish to be bothered with items of merchandise that did not sell in large quantities, preferring to leave such miscellaneous articles to the Private trade of the commanders and officers of its ships. See *infra*, Document No. 7, which will follow in a later number of this Journal.

² Three chests of stationery were given to Van and Chou when they left the Embassy at Canton (MSS. Cornell, *Macartney Correspondence*, No. 354).

Canton, who, as in every first essay to introduce any where the commodities of distant Countries, must in some measure force at first a trade, by exciting new desires and fancies for those objects which People did not perceive the want of till they knew them. It is to be recollect how slowly and reluctantly most of the European commodities now in considerable demand, were accepted by the Chinese Merchants in the beginning of our traffic with Canton. Of many articles however it may be more difficult to encrease the sale, when some of the same, or of a superior quality, are to be had nearer or cheaper.

The Chinese have Copper mines ; tho I fancy they are very imperfect metallurgists, and consequently work their mines to disadvantage ; but, I understand, they send every year twelve large Chinese Junks each of several hundred Tuns burden, to Japan for some of the finest copper of that Country. Of tin, when beaten into thin leaves, the consumption is so general throughout the Empire that scarce a village is to be found without a Shop where those leaves hang for the daily and nightly use of the People in their Temples. The Malay tin has indeed been found more easily reducible into those minute divisions ; but as I suppose the metal of both Countries is intrinsically the same, this accidental quality must probably be derived from some variety in the process of the reduction of the ore (such as using fuel perfectly freed from the smallest mixture of any particles of sulphur), which the advanced state of Chemistry in England might enable the artists there to find out and imitate, as a means of extending very much the sale of that article in China.

The Chinese are yet so much behind Europeans in regard to many conveniences and luxuries of life, tho very far from being indifferent to the enjoyment of them, that the supply of such would swell the Catalogue of articles likely to be vendible here, much beyond what I have mentioned ; but it would be needless to extend speculations of that nature further, until a return can be found of Commodities which

in quality and price would answer the European market. Of these, I have had but little opportunity to add to what is already known ; and fancy is so capricious that it might be hazardous to venture on foretelling what would suit it.

The Gentlemen of my Suite, to whom some pieces of nankeen of a beautiful scarlet dye have been presented, seem to be much taken with it ; and if the Color be lasting, and the cost of it not very much higher than that of the common Nankeen, it might become a favourite wear, especially among our Military in the warm seasons of the Year. I do not mention sugar as a permanent article of export from hence, because I trust your own Territories will come to supply it in plenty, as long as it will bear the freight of an East India Voyage. Tho I have seen numberless plantations of the sugar cane in the provinces of Chiangsi [Kiangsi] and Canton [Kuangtung], and tho it be sold at a price that will admit of considerable profit in Europe under the present desolate state of St. Domingo, which abounded with so much sugar, yet a considerable quantity is imported here from Cochin China, and especially from the western coast of the Island of Formosa, in which places consequently it must be still cheaper.

The Chinese seem to understand the advantage of the division of labour in their great manufactures ; by which means the daily wages be not very much inferior to what they are in England, yet by always employing the same Individual to one species, or subdivision of work, the whole is perfected with a dispatch that reduces the price much below the apparent pains bestowed upon it. So that it is not improbable that any Chinese article of general manufacture which would suit our taste might be afforded upon terms that would admit of reasonable profit to the Company.

I must observe further that there seems no political prejudice to have existed here against the exportation of bullion in return for acceptable imports ; when therefore the rate at which it passes at Canton is such as to make it advantageous to accept it as a remittance, none of the risks or difficulties

attendant upon drawing bullion from European Nations are likely to take place on similar occasions in this Country.

Of all methods indeed of procuring Chinese commodities on terms nearest to their original cost, none can certainly be so effectual as that of our being allowed to send our Ships in quest of them to the ports nearest to their growth; And yet it must be confessed that it might be a dangerous experiment to take any advantage of that permission, if it had already been obtained, until such a subordination shall be established by law among the British Sailors and subjects frequenting the Chinese Ports, and such other precautions taken jointly by Administration and the Company, as may most effectually tend to prevent those disorders among our People, which are likely to break out while left without control, and which the nearer They happened to the Capital of the Empire, the more alarm they would excite, and the more mischief they might occasion by some desperate resolution against our trading, on the part of the Chinese Government. But if the lower ranks of our people can be brought within proper regulation, so as not to offend the Chinese manners, and that some sort of connexion is contrived to be established with the superior Mandarins, I am inclined to believe that it is within our Power so to gain gradually upon them as successively to obtain from them most of the advantages they have hitherto refused us.

I do not find that there is in fact any fundamental regulation of the Empire prohibitory of foreign Commerce with their northern Ports. Such a reason is put forward only to conceal the real motive, which they do not chuse avowing, and which is their apprehension lest too great a communication with Strangers should interfere with that profound tranquillity and that awful submission among all Classes of Men the maintenance of which is in truth the ever-present and only inalterable maxim of this Government. Those apprehensions will gradually give way before the personal good opinion which Men in authority will learn to conceive

of us, when a familiar intercourse shall for any length of time be established with them.

I flatter myself that this good work may be said to be begun already in consequence of the growing terms of intimacy between the Viceroy [Ch'ang Lin] and the Principal Persons of the Embassy. He is much superior to the petty Jealousies of the lower Mandarines ; and I have succeeded in obtaining his permission to send in search of some of the Tea plants of which I have now in my possession several young growing trees, as well as several seeds fit for growth¹ ; and I have got also some of the flowers which are sometimes mixed as I am assured with tea to encrease its fragrance ; among your instructions you mention how extremely desirable it would be that Tea could be produced within the Territories of the Company in India, and you recommend the circumstance in the strongest manner to my attention, and among the papers delivered to me for my information by Mr. Dundas, is one written by Colonel Kyd² a gentlemen conversant in natural history and agriculture, who has a public garden in Bengal for the purpose of making useful experiments relative to the introduction of new plants. This Gentleman mentions in the paper above alluded to that the tea would certainly answer in that part of your Indian possessions called Rungpoor [Rangpur, Bengal].

I perfectly concur with you in thinking on how many accounts it would be desirable to raise that plant in plenty and perfection in parts belonging to yourselves and independent of the Chinese dominions. I indulge myself therefore with the pleasure of foreseeing to what considerable plantations the few nurslings I have been able to procure may give rise in future, if managed with care and skill.

¹ The plants were obtained near the boundary between Chekiang and Kiangsi provinces. See *Macartney's Journal*, in Robbins, op. cit., p. 365 and *infra*, Document No. 6, to be published in a later number of this Journal.

² Robert Kyd (1746-1793), who in 1786 laid out the botanical gardens near Calcutta which were later taken over by the Company (see *Dictionary of National Biography*, and C. E. Buckland's *Dictionary of Indian Biography*).

I send them therefore without loss of time to Sir John Shore Governor General of Bengal, under the care of one of the Gentlemen of Science of my suite Dr. [James] Dinwiddie, whom I have selected for this purpose.¹ I take the same opportunity of sending also a few plants of the Tallow Tree, and the varnish Tree,² likewise in a growing state, the culture of each of which may prove beneficial in Bengal.

I send likewise a tree of that species of mulberry of which the leaves become the food of the silkworm in China. What that species was has been a matter of some uncertainty and any particular relative to the culture of silk in China is become interesting to you, on account of the improvement you desire in what your own territories produce. The Tree is allowed in China to attain its full growth and flourishes most in a flat and loamy soil, as the Tea tree seems to do on dry and rising grounds. I have employed a friendly Mandarine [through the agency of Ch'ang Lin] to make enquiries into every part of their silk manufacture agreeable to the queries you enclosed to me, and I shall send the result to Sir John Shore [see Document No. 6, in Part III of this article], together with a few of the Eggs of the Chinese silkworm which I had some difficulty in obtaining, as the People who rear them have a superstition of losing the whole brood if they part with the smallest portion of them. I understand

¹ Dr. James Dinwiddie accompanied the Embassy as "Machinist". He is not mentioned in the *Dictionary of National Biography*, but there is a *Biographical Memoir of J. Dinwiddie . . . Compiled from His Notes and Correspondence* (Liverpool, 1868), by William Jardine Proudfoot, in the British Museum. See also *infra*, Document No. 6, to be published in Part III of this article.

² The tallow tree is *Sapium sebiferum* Roxb., called in South China 柏子樹 *Chiu-tzü shu*. Tallow was obtained from its seeds (S. Couling's *Encyclopædia Sinica*). In Staunton's account of the Macartney Embassy (*Authentic Account . . .*, ii, 430) it is identified as *Croton sebiferum* after Linnaeus, and in S. Wells Williams' time it was known as *Stillingia sebifera* (*Middle Kingdom* [1882], ii, 11). The varnish or lacquer tree is *Rhus vernicifera* D.C., called by the Chinese *Ch'i*, 油漆 or 漆, from which comes the sap used in making lacquer varnish (Couling's *Encyclopædia Sinica*, and Williams, op. cit., ii, 30).

that a late celebrated naturalist of Sweden¹ has asserted that the insect bred in Japan and China for the sake of its worms, is somewhat different from those who answer that purpose elsewhere. It may be useful to ascertain the fact; and the worms I send to Bengal will answer that purpose as well as serve to propagate a new breed, if it should happen to be different from what is already reared there.

After the pains which were taken to procure from our cotton and porcelane manufactures persons conversant in those Branches and who might have been capable of observing with what difference either of improvement or inferiority the same were carried on in this Country, I am not surprised you should have supposed that I had the advantage of such persons with me in the Embassy; but notwithstanding my own and the repeated applications of others to Manchester, and to the porcelane Manufactories in Staffordshire and Shropshire, I was disappointed in my expectations; and I at last found that the failure arose in some degree from a jealousy which arose in some men's minds, of any Tradesmen sent with me remaining in China and communicating some of the most valuable processes of their art, instead of returning home fraught with new lights from hence. I do not pretend to judge of the propriety of this cautious procedure; but it certainly deprived me of the assistance you were aware was necessary to enable me to collect any very accurate or important information relative to those branches of manufacture in this Country.

Cotton is indeed an object of immense consumption in China, where it forms, generally dyed blue, the universal wear of the lower orders of the People, who add to its warmth in the winter by quilting shreds of wool between the folds; tho in the colder Provinces the skins of Sheep with their fleeces on are used as an outer Garment for a greater shelter

¹ Probably Karl Linnaeus (1707-1778). For the information obtained about silk culture see Staunton, op. cit., ii, 420 ff., and the last note appended to Document No. 7, to be published in Part III of this article.

against the severity of the season. The Chinese account for the late increased demand for cotton from abroad, by the increased population of the Country, and the supply of Cotton cloth to their late extensive conquests. But they do not mention the exportation of any out of their own dominions; and their chief manufacture is of the coarser sort unsuited to foreign consumption. I hope to be able to send you specimens and prices of their different piece goods. Tho there are plantations of Cotton in most of the Provinces of China, and many new ones I am informed lately undertaken, if I may judge from what I had an opportunity of observing in travelling thro the Country, its cultivation answers less the labor than in other parts of the World where I have seen it flourish. The plant is here of the diminutive species, called, I understand, the herbaceous cotton plant; very different from the cotton shrub of the West Indies, which answers best in a dry and sandy soil not distant from the sea, and where the periodical rains do not interfere with the time of the plants flowering, and expanding with full effect that downy substance adhering to the seed which constitutes the staple of the Cotton. Those circumstances being less favorable in China particularly in the interior Provinces, the demand for that article from abroad notwithstanding any efforts of the Chinese Planters to cultivate a sufficiency at home, is not likely soon to cease.

Of the cotton manufacture I should, without the assistance of people bred to that business, have been able to give no minute or accurate account even if the opportunity had been afforded me, but the Vice-Roy [Ch'ang Lin] has been so good to send a special Messenger for specimens of the different materials used in the composition of porcelane; and if his orders have been punctually obeyed,¹ those specimens which I shall forward to Sir Joseph Banks with the view of having them compared under the eye of Chemists and skilful artists

¹ No information of value regarding the manufacture of porcelain appears to have been obtained.

with the materials used in England for the same purpose, may afford an opportunity of judging if any improvement yet remains to be made in our own manufactures of the same kind.

No inconsiderable quantities of China porcelane together with other commodities of this Country are exported in their own vessels to Manilla, Borneo and Batavia and other places in the Chinese Seas, principally for the consumption of their Countrymen settled in those places, and whose industry and ingenuity contribute much to the prosperity of every place where they reside in numbers. Their vessels carry back spices of various kinds, and other productions of the warmer Climates ; and this interchange forms the principal foreign commerce carried on by the Chinese in their own bottoms, so far as I have been able to learn.¹

But whatever may be deficient in the information which my hastened journey has enabled me to procure about this Country, may, I doubt not, be obtained hereafter and by means, sometimes even of European and Chinese Missionaries at Pekin and in the Provinces with whom some of the Principal Gentlemen of the Embassy have formed intimacies² which

¹ MSS. India Office, *China : Canton Diaries*, contain tabular accounts of the junk trade of Canton for a number of years after 1793.

² Sir George Leonard Staunton corresponded with Louis de Poirot (French ex-Jesuit) and Nicholas Joseph Raux (French Lazarist), both of whom were at Peking, and with Robert Hanna (Irish Lazarist), who accompanied the Embassy from Canton to Tientsin but was forced to return to Canton before obtaining permission to enter the Emperor's service at Peking. Staunton's son, George Thomas, had some correspondence in 1802-3 with Louis François (Marie) Lamiot (French Lazarist), who, like Hanna, had accompanied the Embassy to Tientsin only to be forced to return to Canton, from which place he obtained permission to proceed to Peking. For the text of the Missionaries' letters see E. H. Pritchard, "Letters from Missionaries at Peking Relating to the Macartney Embassy," *T'oung Pao*, xxxi (1934), 31-55. Lord Macartney presumably also had in mind Joseph de Grammont (French ex-Jesuit), who wrote a number of letters to the Ambassador during the course of the Embassy (*ibid.*, pp. 8-24), and Jacob Ly and Paolo Cho, two Chinese trained in Naples, who accompanied the Embassy as interpreters and who remained in China as native Christian priests.

are to be kept up by occasional correspondence when the opportunity of friendly travellers may offer, for there is no regular open post for Individuals. It is in this way only that the Missionaries can be rendered useful to the Company, without any avowed connexion with it or the Supercargoes. The Missionaries were no doubt formerly very able to serve and no doubt did serve the temporal interests of their respective Nations. But the Portugueze [sic] alone can be said to do so now. The information the others can give to their English correspondents under the appearance of friendly or scientific communications cannot fail to be useful.

As I have for the present endeavoured to satisfy you on the principal points to which your instructions relate, it remains with me only to refer you to the enclosed particulars for the disposition of the Presents and specimens entrusted to my care, some few of which remaining in my hands I have delivered to your Commissioners here, tho I was forced at times to purchase others to add to what would be agreeable to the Emperor.¹ You will on this head have probably already learned thro your Commissioners at Canton, that there was reason to suppose very high expectations had been formed in the Emperor's mind of the presents he was to receive, and that it was consequently judged expedient to add to those I brought out from Europe for him a Herschel's reflector [telescope] belonging to Mr. Brown and the celebrated lens from Parker, which Captain Mackintosh had purchased on

¹ See *supra*, page 221, note 1. A list of the presents delivered to the Emperor is to be found in MSS. India Office, *China : Macartney Embassy*, xcii, 155-170; MSS. Cornell, *Macartney Correspondence*, viii, Nos. 351-3. In addition to the presents purchased by the Company and sent out with the Embassy, valued at £15,610 (see *supra*, *JRAS.*, April, 1938, p. 222), Macartney purchased from Henry Browne at Canton and from Captain Mackintosh and F. Macrae, surgeon of the *Hindostan*, various watches, guns, woollens, lens, and reflectors valued at about £3,781. Of these articles and of the presents originally sent, he consigned articles valued at £4,270 to the supercargoes at Canton or to Dr. Dinwiddie, making the total cost of presents and specimens delivered £15,121 (MSS. Cornell, *Macartney Correspondence*, Nos. 345, 436a).

a speculation of much probable profit, but which he very handsomely gave up on this occasion to the Company.¹ The mention of his name makes it necessary for me to add as an act of Justice to him that he has thro the whole of this expedition whilst under my command conducted himself with great ability and attention to the Public Service. Besides the above mentioned articles I was under the necessity of providing others, among the rest some curious watches, either for the use of the Emperor or such considerable Persons of his Court, whom it was particularly desirable to attach to our Interest,² but of these articles I shall deliver most to your Commissioners to be sold for your account, as some of those Persons for whom part of such presents were intended proved inimical to us, and I did not chuse [*sic*] to dispose of any thing without a fair prospect of deriving from them some advantage to the Company.

The Brig Jackhall which had been purchased in England to attend the Lion was sent by me from Tien-sing to Canton to be sold by your Commissioners for the benefit of the Company.³ The particulars also of my expenditure I trust will shew [*sic*] that I have not swerved from that economy in the disposition of the Public money without which I think no man worthy to be employed. I should not however have been backward in laying out considerable sums at the Court

¹ Herschel's telescope was obtained from Henry Browne at Canton and its probable value was about £200. Parker's lens was purchased at a cost of £773 (*ibid.*, viii, No. 345).

² A letter from Father Grammont dated at Peking, 30th August, 1793, advised Macartney that he should provide presents for the Emperor's sons and eldest grandson, and for several of the high officials. As a result Lord Macartney purchased from Captain Mackintosh on 1st September, fifteen pairs of fine watches for £2,399. Only one pair, valued at £472, given to the Emperor as a personal present from Macartney, was used (Pritchard, *T'oung Pao*, xxxi [1934], 19–20; MSS. Cornell, *Macartney Correspondence*, viii, No. 345).

³ The *Jackall* was not sold at Canton, but sailed to India with the plants collected by the Embassy and sent to Sir John Shore under the direction of Dr. Dinwiddie (see below Document No. 6 and MSS. India Office, *China: Macartney Embassy*, xciii, 363). She was presumably disposed of in India.

of Pekin if the opportunity had offered of deriving from thence any material benefit; but it would have ill become me to have risked at random the property of the Company.

The Officers of the Wardroom of the Lion took their stations as they assert on board that Ship in the full confidence of being allowed batta in the same manner as it was allowed to the Officers of the Vestal, when sent out with Colonel Cathcart on a similar occasion and on the same principle which it is allowed to the Officers of the same station in the Navy serving in other parts of Asia. It is possible, and the Gentlemen of the Lion are persuaded that the fact is so, that the omission of Batta for them in your letter [of 8th September, 1792] was merely accidental, however, and tho the sum is trifling, I declined paying any money upon that score until your pleasure should be ultimately known upon the subject.¹ In small as in great objects, it is my duty and inclination to support the rights and the interests of the Company and with these sentiments I remain, with great respect,

Gentlemen,
Yours most obedient and
most faithful humble Servant
MACARTNEY.

P.S.—I have taken care to put the Viceroy sufficiently upon his Guard against confounding with British Subjects those of the United States of America, whom the People of Canton have already learned to distinguish under the name

¹ As early as 11th October, 1793, Captain Gower of the *Lion* had written to the Chairman of the Court of Directors calling attention to the fact that no provision had been made for paying the officers of the *Lion*, except himself, while the ship was in Chinese waters. When the Embassy arrived home Macartney again wrote to the Chairman about the matter, and was instructed to pay the officers £250 per year, being the allowance paid to similar ships in the Indian service (MSS. Cornell, *Macartney Correspondence*, vii, No. 307; MSS. India Office, *China: Macartney Embassy*, xcii, 23-4, 521).

of Yankees. I have supplied the Viceroy with the appropriate flags of the respective Nations.

P.P.S.—I have just received your letter of 15th March [1793], and 11th May [1793], the latter enclosing copies of correspondence between the Governor General of Bengal, the contending Rajas of Napaul and Lassa, and the Commander of the Chinese forces in Thibet. These papers are of great importance, as they will serve to detect the gross misrepresentations of this business by the Chinese General [Fu K'ang-an], and to which many of our difficulties at the Court of Pekin are to be ascribed.¹

M.

(*To be concluded.*)

¹ See *supra*, page 380, note 1. The letter of 15th March, 1793, is in MSS. Cornell, *Macartney Correspondence*, vi, No. 243, and that of 11th May, is referred to in one of 20th June, 1793 (No. 258). The letter of 15th March, tells of the beginning of war with France and of the negotiations of 1793 for a renewal of the Company's Charter. An effort to explain the Tibetan affair served as a pretext for an attempt to open a correspondence with the Peking government in 1795 (Pritchard, op. cit., pp. 372-3; Morse, *Chronicles*, ii, 273-6).

The Instruments of Music on the Tāq-i Bustān Bas-Reliefs

BY HENRY GEORGE FARMER

(PLATES I-II)

THE famous Sāsānian bas-reliefs at Tāq-i Bustān, (A.D. 590–628) have so often been reproduced that it is highly probable that most Orientalists could picture the scenes in the mind's eye with little difficulty. Yet I do not suppose that any could give a correct delineation of the instruments of music contained therein for the simple reason that the reproductions of these sculptures have given so many different outlines for these instruments.

This contrariety is due to the fact that in the pioneer days of archaeology, when the reproduction of works of art in this category was done by hand, and by non-musicians, much imaginative material was introduced, to say nothing of what was omitted. Even in the early days of photography, when the art was not so far advanced as it is to-day, the results left much to be desired.

In consequence of this, some of the instruments delineated in the Tāq-i Bustān bas-reliefs were so incorrectly outlined or so badly photographed by archaeologists that musico-graphers, who only had these reproductions as their guide, were misled as to the species and type of instruments portrayed.

The instruments occur in two scenes : (1) *the boar hunt* and (2) *the stag hunt*. For convenience of description they may be subdivided into the following groups :—

(1) *The boar hunt.*

(a) *Harpists in the royal barges.*

(b) *Harpists in the minstrels' barges.*

(2) *The stag hunt.*

(a) *Orchestra on the left-hand side.*

(b) *Military Band on the right-hand side.*

§ 1

THE DELINEATION OF THE INSTRUMENTS

The first, in this country, to give us a glimpse of the instruments in the Tāq-i Bustān scenes was Edward Bunting who, in his *Ancient Music in Ireland . . .* (1809), included a representation of the harpists in the boar hunt, where the harps used in the minstrels' barge were given, although erroneously, the form of trigons, i.e. harps with strings stretched over a trigonal frame.¹

Then came the drawings in Sir John Malcolm's *History of Persia* (1815). The harps shown in both groups of the boar hunt were not only wrongly given the same outline, but one could not determine the precise species because of the artist's omission of the determining factor—the position of the sound-chest. In the stag hunt, all the harps were again given the same outline, and one could not fix the species for reasons given above. These were the only instruments that could be identified in this group. In the military band group only a trumpet could be recognized.²

Much better were the scenes in Sir Robert Ker Porter's *Travels in Georgia, Persia . . .* (1821–2). In the boar hunt, two species of right-angled harps, with a lower sound-chest and an upper sound-chest respectively, were clearly and correctly outlined in the two groups. In the stag hunt, the orchestra revealed, from left to right, a performer on an oboe or reed-pipe, a player on panpipes or a square tambourine, a performer on an instrument which was not shown, and a player of some kind of wind instrument. Carl Engel, the well known nineteenth century musicographer, conjectured that this latter was a bagpipe.³ The harps in the orchestra were

¹ p. 10 : pl. iii, 9.

² Vol. i, p. 258 : the first two plates.

³ *A Descriptive Catalogue of the Musical Instruments in the South Kensington Museum* (1874), p. 58.

all inexactly shown as acute-angled instruments with an upper sound-chest,¹ although Engel dubbed them trigons.

The next important contribution was the *Voyage en Perse de M.M. Eugène Flandin, peintre, et Pascal Coste, architecte . . . [1843–1854]*. In the boar hunt, the two species of harps, as recognized by Porter, were clearly delineated, although Flandin called one species a “lute”. In the stag hunt, the instruments in the orchestra were scarcely an improvement on what had preceded. The first two performers were not given any instruments whilst the third and fourth players were shown holding what would naturally be taken for square tambourines but which we now know to be a misconception. The instruments in the military band were depicted in much the same way as Porter had done.²

It was not until Friedrich Sarre published his *Die Kunst des alten Persien* (1923), in which the illustrations were based on actual photographs, that we were able to get a real view of these instruments. Yet the photography left much to be desired, and the strings on the harps could not be discerned. In the boar hunt, his plates confirmed Porter and Flandin in the two species of harps. In the stag hunt, his plate showed, for the first time, that two species of harps also existed in the orchestra, and several new instruments, not hitherto delineated, were to be recognized in this group as well as in the military band.³

Yet it has been reserved for Dr. Arthur Upham Pope, the editor of the monumental *Survey of Persian Art*, to provide us with photographs which now enable us to determine, with almost practical certainty, not only the precise identity of these instruments but many details of construction, and it is to this savant that I am indebted for permission to publish enlargements of details from his photographs.⁴

¹ Pls. 63, 64.

² Tome i, p. 4; tome ii, pls. 10, 12.

³ Nos. 86–7, 88–9.

⁴ The complete scenes appear in *The Survey of Persian Art*.

§ 2

THE IDENTIFICATION OF THE INSTRUMENTS

In Persian lexicons much confusion exists where instruments of music are concerned. Much of this may be due to the misleading explanations of Arabic lexicographers, as I have frequently pointed out,¹ and even the great Al-Zamakhsharī (d. 1144), who compiled an Arabic-Persian lexicon, had perforce to follow both the definition and the terminology of the former. Although we have two precious authorities on Persian instruments of music—the *Kanz al-tuhaf* (fourteenth century) and the *Jāmi‘ al-alhān* of Ibn Ghāibī (fifteenth century)—we cannot depend too far on them when dealing with instruments in use during the Sāsānian era, *a thousand years earlier*. It is true that we have a few Pahlavī,² Persian,³ and Arabic texts⁴ that give us a number of names of instruments of music, and of recent years the subject has been discussed by Dr. J. M. Unvalla in *The Pahlavī Text: King Husrav and his Boy* (Paris, 1921), and by Professor A. Christensen in his “La Vie musicale dans la civilisation des Sassanides” in the *Bulletin de l’Association Française des Amis de l’Orient*, Nos. 20–1 (Paris, 1936), but we still need much more information on the subject although what is offered in this contribution must still be considered probative.

The enlargements from Dr. Pope’s photographs enable us to get a closer view of some of these Sāsānian instruments, although they may not be so clearly defined as they are in other Sāsānian art remains. The first two plates show the two species of harps in the boar hunt scene, viz. one with a lower sound-chest and another with an upper sound-chest.

¹ *Encyclopædia of Islam*, iii, 528; iv, 986.

² Unvalla, as cited, and Benveniste, *JA.* (1932), p. 260. Professor H. W. Bailey informs me that Dr. Unvalla’s book must be used with caution.

³ *Shāh nāma*.

⁴ Al-Mas‘ūdī, *Les prairies d’or*, viii, 90–1; Al-Tha‘ālibī, *Histoire des rois des Perses*, trad. par H. Zotenberg, Paris (1900).

The former (Fig. 1) is the more interesting because it is the older and the more infrequent instrument. The horizontal sound-chest consisted of an oblong wooden box, whilst the vertical arm, which carried the tuning pegs, was solid. From fixtures or "pins" in the sound-chest the strings were stretched in a diagonal fashion to the tuning pegs. It is precisely the same species of harp as that found in the Sumerian Royal tomb (3rd millennium B.C.),¹ on the Assyrian bas-reliefs (seventh century B.C.) in the same museum,² and on the Sāsānian (?) silver dish in the collection of the Archaeological Commission at Leningrad.³

Seemingly this species of harp was reserved for the special minstrels, as this is the instrument played by the harpists in the royal barges in the boar hunt at Tāq-i Bustān. On these instruments some ten strings may be discerned, and a similar number is to be found on the Assyrian instruments. In the stag hunt the leading harpist in the orchestra also plays an instrument of this species. A similar regality or importance attached to this harp may be noticed in several Assyrian scenes.

Elsewhere I have assumed⁴ that the Persian name for this species of harp was *van*, a word which equates with the Arabic *wann*.⁵ This latter is described by Al-Fīrūzābādī (d. 1414) as being an instrument somewhat similar to the *sanj* or *jank*, i.e. the Persian *chang*.⁶ Yet we know from a much earlier source, Al-A'shā' Maimūn (d. ca. 629), that the *wann* was different from the *sanj*,⁷ the probable dissimilarity being, as we shall see, in the position of the sound-chest.

¹ *The Antiquaries Journal*, viii, October, 1928. Galpin, *The Music of the Sumerians*, pl. v.

² Engel, *Music of the Most Ancient Nations* (1870), p. 49.

³ Sarre, *Die Kunst des alten Persien*, Nr. 110.

⁴ *The Survey of Persian Art*.

⁵ The Occidental Persian lexicographers in defining the *van* as a "cymbal" (*sinj*, *sanj*) played with the fingers, leads one to conclude that finger cymbals are meant, but the Persians are merely following the definitions of their Arabic predecessors who used the word *sanj*, a term which stood for both a harp and a cymbal. ⁶ *Al-Qāmūs*, s.v. ⁷ *Dīwān* (G.M.S.), p. 201.

The Persian *van* would be the Pahlavī *vōn* or *vūn*,¹ a word which can be equated with the Sanskrit *vīṇā* (Hindi *bīn*),² the Coptic *boine* or *boini*, and the ancient Egyptian *bain-t* or *ban-t*.³ Both the name and the instrument have long since fallen into desuetude in Persia and the Middle East.

The harp with the upper sound-chest (Fig. 2) has not the antiquity of that with the lower sound-chest, although we can trace it in Babylonian, Assyrian, Elamite, and Egyptian art.⁴ Two types of this harp are shown on the Tāq-i Bustān bas-reliefs—one with a right-angled frame and another with an acute-angled frame. The former, which is found in the hands of the harpists in the minstrels' barge of the boar hunt, had a vertical sound chest which seems to have been an oblong box, not unlike the Egyptian instrument.⁵ From nine to twelve strings may be counted on the various instruments shown in this scene. These strings were possibly fixed to "pins" in the side of the sound-chest, as in the Assyrian and later Persian instruments, from which they were stretched to the tuning pegs on the horizontal arm below.

The acute-angled type (Fig. 3) with a distinct curve on the back of the sound-chest is delineated in the orchestra of the stag hunt scene. We cannot tell the number of strings because the instruments are not delineated with sufficient precision, but the example shown on the Sāsānian flagon given in *Argenterie orientale*, Nr. 65, reveals some fifteen strings,⁶ and a similar number may be counted on the Elamite example

¹ Unvalla, op. cit., pp. 15, 27. He transliterates the word as *vin*. Professor Christensen writes *vīn*.

⁶ This flagon has been denied a Sāsānian origin and has even been dated as late as tenth to eleventh century.

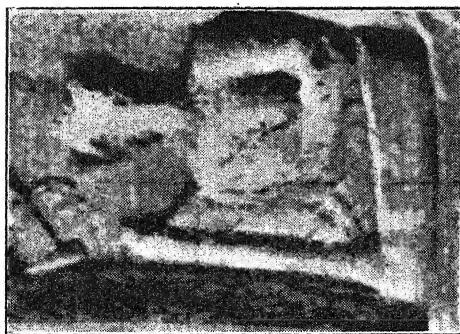

FIG. 1.

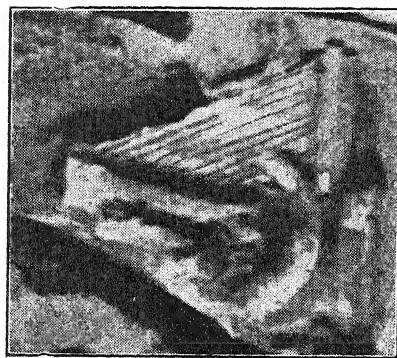

FIG. 2.

FIG. 3.

SĀSĀNIAN INSTRUMENTS OF MUSIC.

at Kul-i Fir'aun,¹ and on one of the Assyrian examples also.² Both the Elamite and Assyrian instruments show what would appear to be sound-holes in the sound-chest.

The Pahlavī and Persian name of the harp with an upper sound-chest was *chang*,³ a term which, in itself, meant "bent, crooked". It was the most important instrument of music in Sāsānian times and is given a prominent place in the festive scenes in the *Shāh nāma*.⁴ It was the instrument which the famous minstrel Nikīsā played at the court of Khusrav Parviz, and has been the theme for many a poet and painter. The *chang* has long since fallen into neglect in Persia.⁵

The wind and percussion instruments have considerable interest, and these are to be found in the orchestra and military band in the stag hunt scene. The first performer in the orchestra, counting from the left, is clearly playing an oboe or reed-pipe⁶ (Fig. 4). This would probably be the *nāy* (Pahl. Pers.), a term which, in the ordinary sense, meant "a reed" and then "a tube", but in its generic musical connotation referred to "a wood-wind instrument". In early times it stood specifically for an oboe,⁷ although the term *sūrnāy*, later softened to *surnāy* and *surnā*,⁸ was also used. Its strident tone made it admirably suited to outdoor music (*sūr* = festival), as we see in the Tāq-i Bustān scene. The legendary Jamshid of the *Shāh nāma* is said to have been its inventor.⁹

The second instrumentalist of the band (Fig. 5) plays an instrument which cannot be identified so readily, but we may

suppose that it is a square tambourine, as the hands are in the conventional position for playing such an instrument. It may also be seen in the Qul-i Fir'aun group. We do not know its name. It could scarcely have been the *gambar* (Pahl.) or *chanbar* (Pers.), because, as the name itself suggests, this was a round tambourine.

The third and fourth instrumentalists (Figs. 6 and 7) play real mouth organs, not bagpipes, as Engel surmised. As I have already pointed out,¹ the instrument was identical with the Chinese *shēng*.² In Sāsānian times it was known as the *mustak* (Pahl.) and later as the *mushtaq sīnī* (Chinese *mushtaq*).³ Neither Dr. Unvalla, Professor Christensen, nor the lexicons identify the *mustak*. Although the outlines on the bas-relief are indistinct, a fine example may be seen on a Sāsānian flagon shown in *Argenterie orientale*, Nr. 65, and in the *Gazette archéologique* (1886), xi.

The military band on the right-hand side of the stag hunt scene displays six instrumentalists in two rows, the upper row seated and the lower row standing. The first performer (Fig. 8) in the upper row appears to be playing a large kettledrum, probably the *kūs* mentioned in the martial scenes of the *Shāh nāma*.⁴ With the Arabs of the tenth century the *kūs* was the largest of these drums.⁵

The second performer (Fig. 9) is undoubtedly playing a trumpet. Being the straight form of this instrument one might suggest that it was the *rūyīn nāy* (lit. brazen tube), another of the warlike instruments of the *Shāh nāma*,⁶ rather than the *karraṇāy* which appears to have been a bent trumpet.⁷

The third performer (Fig. 10) seems to have a small kettle-drum, perhaps two, before him, if the position of the arms

and the general contour of the object or objects are taken into consideration. Such an instrument would probably be the *tās* (Pahl.) or *tāsa* (Pers.),¹ as Unvalla and Christensen have surmised. The *tāsa* is still a small kettledrum in India.²

The first two performers (Figs. 11–12) in the lower row play straight trumpets similar to the second performer in the upper row, although Professor Christensen avers that the instrument is a trombone!³

The third performer (Fig. 13) plays a waisted drum, i.e. one in which the body of the instrument is narrow in the middle and wide at the ends. If we can accept the lexicons on this point, the instrument was probably the *tabīr* or *tabīra* of the *Shāh nāma*,⁴ of which the *tabūrak* of the Pahlavī texts would be a diminutive.⁵

§ 3

OTHER SĀSĀNIAN INSTRUMENTS

The Persians of Sāsānian days knew of many more instruments than those delineated in the Tāq-i Bustān scenes, as we know from other art remains and from the many names of instruments which are to be found in Pahlavī, Persian, and Arabic texts.

Perhaps the most famous of these instruments was the *barbūt* (Pahl.) or *barbuṭ* (Pers.), a barbiton or mandore, or what one might call a lute with a hollow neck.⁶ The name is said to be due to the form of the instrument which resembled

¹ Unvalla, 28.

² Tagore, *Yantra kosha*, 102; *Short Notices . . .*, 39. At the same time we must recognize that *tāsāt*, according to Ibn Ghāibī (d. 1435), were the musical cups used like the modern *harmonica*.

³ Christensen, 33.

⁴ *Shāh nāma*, i, 137.

⁵ Unvalla, 28, quoting from the Avesta texts.

⁶ See my article in the *Encyclopædia of Islām*, iv, 985–6; my *Studies in Oriental Musical Instruments*, i, 95–6; and my *Turkish Instruments of Music in the Seventeenth Century*, pp. 36, 41.

the breast of a duck (*bar* = breast, and *bat* = duck), an explanation which was given as early as the tenth century.¹ According to the art remains, notably one given in *Argenterie orientale*, Nr. 64, it had four strings, a point confirmed by Khālid ibn al-Fayyād (d. ca. 718).² It was the instrument which the famed minstrel Bārbad played at the court of Khusrav Parvīz.

Next in order of importance was the *tambūr* (Pahl.) or *tanbūr* (Pers.). This was the pandore or long-necked lute. The Persian lexicographers say that the word was originally *dunbara* because its long, slender neck was like a lamb's tail (*dunba* = tail, and *bara* = lamb).³ An early example of this instrument, from Susa, dating probably from the Kassite period, may be seen in the Louvre, Paris.⁴ The large pandore appears to have been called the *tambūr-i mas* (Pahl.), a name which, we may suppose, would equate with the modern *tanbūr-i buzurg*.

I have already surmised that the Sāsānians called their harp with a lower sound-chest the *vōn* or *vūn* (Pahl.), which later was softened to *van* (Pers.). Seemingly they had another of these instruments with open strings known as the *kannār* (Pahl.),⁵ a name suspiciously like the Hebrew *kinnōr*, the Arabic *kinnāra*, and the Sanskrit *kinnarī*. Yet, although we can trace the Hebrew instrument to antiquity, the Sanskrit word does not occur earlier than the commentator Maheśvara and the *Saṅgīta ratnākara*.

Although it has been supposed⁶ that the *kannār*, like the *kinnōr* and *kinnāra*, was a cithara,⁷ it may have been quite different. This reservation is due to the mention of an Indian

⁷ Farmer, *Studies . . .*, ii, 31.

instrument called the *kingira* by the Arabic authors Al-Jāhīz (d. 868) and Al-Mas'ūdī (d. ca. 957).¹ The latter describes the instrument as having “one string stretched over a [frame, the sound-chest of which was a] gourd”. Even in the fourteenth century the *kingira* was still a favourite in Persia,² and Chardin testified the same in the seventeenth century.³

A combination of the two Sāsānian instruments just mentioned was known as the *vōn kannār* or *vūn kannār* (Pahl.). What the specific structure of this instrument was we can only conjecture. Professor Christensen, who looks upon the *vōn* (= *vīn*) as a lute, and the *kannār* as a cithara, calls it a lute-cithara.⁴ Dr. Unvalla, on the authority of Dr. Curt Sachs, states that it was “a long-necked lute with its body [= sound-chest] in the shape of an ostrich egg”,⁵ a definition based, it would seem, on Tagore's description of the Indian *kinnarī vīṇā* in his *Yantra koshā*.⁶

The *shīshak* (Pahl.) of Sāsānian times is another elusive instrument. Dr. Unvalla, on the authority of Dr. Curt Sachs, points out that the modern *shīshak* is a four-stringed *rabāb*,⁷ i.e. a viol. As I have shown elsewhere,⁸ the name occurs in many forms, which is usual with loan words, and may be found in the Arabic *shūshak* of the *Ikhwān al-Ṣafā'* (tenth century),⁹ and the Persian *ghīshak* of the *Kanz al-tuḥaf*

¹ Al-Mas'ūdī, viii, 92. The text in both authors has ككلة which would appear to be a copyist's slip for ككرة. Cf. my *Studies . . .*, i, 62.

⁶ *Yantra koshā* (in Bengāli), Calcutta (1875), p. 24: and the same author's *Short Notices of Hindu Musical Instruments* (in English), Calcutta (1877), p. 20.

⁷ This word, through a printer's error, is written *rehāb*, i.e. an *h* instead of a *b*. The mistake is hardly worth mention, but the same slip occurs in several books.

⁸ *JRAS.* (1935), 353: *Studies . . .*, ii, 28, 32.

⁹ *Rasā'il* (Bombay ed.), iii, 97. The text has شوشل which must be a copyist's slip for شوشك.

(fourteenth century).¹ In the former probably, and in the latter undoubtedly, it was a bowed instrument, as it is to-day in Turkestan. The Sāsānian *shishak* could scarcely have been an instrument of this kind because we have no evidence of the bow as a musical implement prior to the ninth century.² It is far more likely that the Sāsānian *shishak* was akin to the Indian *ghoshaka* (Sanskrit), a species of *vīṇā* mentioned in the *Nātya sāstra* (fifth century).

Dr. Unvalla has also supposed that the *kapīk* (Pahl.) was a viol. He says that the modern Persian word *kapī* stands for a monkey, and since there is in India a viol called the *ṭā'ūs* (peacock), the sound-chest of which is in the form of this bird, he assumes that the *kapīk* was "surely a music-instrument played with a bow, whose body [= sound-chest] had the form of a monkey".³ For reasons expressed above we cannot admit that the *kapīk* was a viol. At the same time it ought to be pointed out that on the flagon attributed to the Sāsānian period there is an unidentified musical instrument in the framework of which an animal, perhaps a monkey, is represented.⁴

It is true that an instrument called the *rubāb* is mentioned in the *Shāh nāma*⁵ but, unlike the Arabian *rabāb*, the Persian *rubāb* was not a viol, not even in the fourteenth century.⁶ The latter was a lute with a waisted sound-chest, the face or "belly" being covered with a membrane, and an example (eighth to ninth century) may be seen in Koechlin and Migeon's *Oriental Art* (1925), pl. 1.⁷ It was not unlike the modern *rubāb* of Persia, Turkestan, and Afghanistan.

We have already seen that the straight trumpet was probably the *rūyīn nāy*, but in addition to this instrument

⁶ *Kanz al-tuhaf*, fol. 20 v.

⁷ The *rasan* of the Pahlavī text (Unvalla, 28), may very well be a copyist's slip for *ravav* (= Pers. *rubāb*).

there were three others of the same group mentioned in the *Shāh nāma*. The *karranāy* is frequently introduced into the battle scenes,¹ and in the fifteenth century it was a bent trumpet, as stated by Ibn *Ghaibī*.² The word is also written *garnāy*, *karnāy*, and *karnā*, which suggest a Semitic origin (Assyr. *qarnu*, Heb. *qeren*, Arab. *qarn*), although Persian lexicographers hint that it may originally have been *karnāy* (*khar* = ass), probably on account of its hoarse tone. Certainly its tone was sometimes likened to an ass's bray.³

Two instruments of the trumpet or horn kind, made probably of animal horn, were the *shaipūr* and *būq*, both mentioned in the *Shāh nāma*.⁴ The *shaipūr*, a word which reminds us of the Assyrian *shapparu*, the Hebrew *shophar*, and the Arabic *shabbūr*, was doubtless a crooked animal horn. An instrument of this form appears to be delineated on the Sāsānian silver dish in the British Museum, where it is to be found in the hands of the lowest figure.⁵

I suggested to Professor Arthur Christensen that the Pahlavī *spar*, occurring as the name of a musical instrument,⁶ may possibly be a copyist's slip for the Pahlavī equivalent to the Persian *shaipūr*. He does not accept my theory, although he does not deem it impossible.

The *būq* may be the instrument delineated on the Sāsānian dish in the collection of the Archaeological Commission at Leningrad, where six military trumpeters are shown with instruments in the shape of animal horns.⁷

Among the wood-wind instruments there are very few names of which we can be certain. Dr. Unvalla's suggestion that the *vanjak* (Pahl.) might be equated with the Indian

⁷ Sarre, op. cit., Nr. 105.

flute *vansikā* (Sanskrit) seems to be quite acceptable.¹ His identification, supported by Professor Christensen, of the *mār* (Pahl.) as the oboe, needs further proof.² I have already said that the *nāy* was an oboe or reed-pipe. It was a martial instrument³ and as such was more likely to have been an oboe rather than a "fife" as M. Benveniste translates the term.⁴ Indeed Al-Tha'ālibī, translating from the Pahlavī, speaks of the "single *nāy*" (*al-mizmār al-awhad*)⁵ so as to distinguish it from the "double *nāy*" or *dūnāy*.

The *dūnāy* was a double oboe or reed-pipe, better known to Turanian peoples as the *kūshnāy* or *qūshnāy*. It is mentioned by Al-Mas'ūdī (tenth century) as one of the instruments "invented" by the Persians.⁶ The instrument may be seen in the hands of one of the Elamite musicians on the Niniveh bas-reliefs in the British Museum.⁷

The *shamshīr* (Pahl.) has not been identified,⁸ but there is the Kurdish *shamshāl*, an oboe, which may be a survival of this instrument.

Two names of drums may be added to those already mentioned. The *dumbalak* (Pahl.) or *dunbalāk* (Pers.),⁹ was probably a small drum with a cylindrical body. The *dunbal* or *danbāl* (Pers.), of which the above is a diminutive, was still popular in the seventeenth century.¹⁰ The *tumbak* (Pahl.)¹⁰ or *dunbak*, *tunbak*, *tanbīk*, *tunbūk* (Pers.) was a goblet-shaped drum in the seventeenth century,¹¹ and was certainly not a bagpipe as some lexicographers aver.

¹⁰ Benveniste, *J.A.* (1932), 260. The editor suggests *tumba[la]k*.

¹¹ Kaempfer, op. cit., Nr. 6.

Other instruments of percussion were the *sīl* (Pahl.)¹ or *zīl* (Turk.). This term was probably used for the small finger cymbals, played in pairs, known nowadays as the *sinj* or *zinj*,² although they carry the older name in some Islāmic countries.³

The *zanchīr* (Pahl.) or *zanjīr* (Pers.)⁴ must have been, as the name suggests, a jingling chain like the modern *dabbūs* or *dubbūs* (Arab.) of the dervish fraternities, consisting of a sceptre with chains attached.

Finally, the art remains show us two other percussion instruments of the Sāsānian era, viz. the frame cymbals and the rattle, although we do not know their names in Pahlavī. The frame cymbals have been known as the *chaghāna* or *chaghāna* (Pers.) since the thirteenth century at least.⁵ Hoary legend says that the mythical *Sīrkhudā* of the *Shāh nāma* was its "inventor".⁶ It consisted of a frame like a pair of tongs, the open extremities being furnished with small cymbals which sounded when the extremities were closed together. A representation of the Sāsānian *chaghāna* is to be found in *Argenterie orientale*, Nr. 78, and in Curt Sach's *Die Musikinstrumente der alten Ägyptens*, p. 22. An instrument of a simpler type may be seen on a fifth century silver dish given in Sarre's *Die Kunst des alten Persien*, Nr. 111.

The rattle is known in Persia of modern times as the *qāshiq*. It is a Turkish word which means a spoon or ladle. The instrument of music consists of two pieces of wood hollowed out like ladles, the concave parts being placed together after the two hollow cavities have been filled with small sonorous substances, generally sonnettes, so as to produce a jingle or rattle. What would appear to be this instrument may be seen in the left hand of the female figure

⁶ Farmer, *Turkish Instruments of Music . . .*, 10.

on the left side of the monarch in the scene depicted on the Sāsānian silver dish in the British Museum.¹ The name *qāshiq* may have been known in Pahlavī if we can allow that Dr. Unvala's *kapīk* is a copyist's slip for *kashīk*.

The number and diversity of instruments of music used in Persia during the Sāsānian period are an eloquent testimony to the highly developed art of instrumental music at that time. Not only do the stories show how much instrumental music was appreciated in these days, but the art remains confirm the statements in every way.

¹ Dalton, loc. cit. *Argenterie orientale*, Nr. 66.

The Ancestral Message

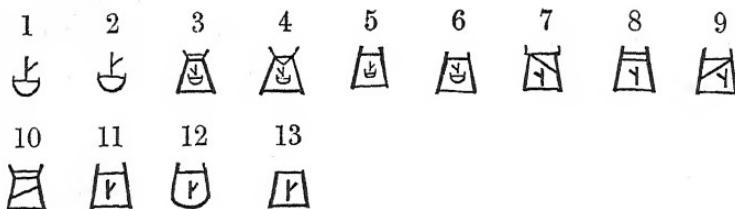

By L. C. HOPKINS

IN the passage of nearly forty years since the first discovery of the Honan relics and their strange inscriptions, great has been the progress in their decipherment. How much and how solid this gain in knowledge has been, the present writer can perhaps appreciate better than more recent students, when he looks back at his own notes and the correspondence that passed between the late Mr. Frank Chalfant and himself.

However, despite the competence and untiring industry of the scholars of *Academia Sinica* and others, there remain a fair number of recurring and obstinate forms in the Honan inscriptions that have so far defied detection. But there are others. On the fringe, as it were, of these obstructive diehards there are a number of archaic forms of which different Chinese specialists have deduced different and mutually incompatible modern equivalents. Thus, for example, a character occurring in the title of one Shang Sovereign has been equated by one expert with the word for sheep, by another with an ethnic and family name, and by a third with the word for dog.

It is with one of these borderland groups, at present ranged in a kind of suspense account, that this paper is concerned. Guided, and in a sense encouraged, by the criticism and insight of a now well-known Chinese specialist, Mr. Kuo Mo-jo, I hope to effect a "liquidation" of certain embarrassing difficulties of decipherment, and some "clarification" of obscurities attendant on the novelty of forms involved.

A selection of thirteen examples taken from published Chinese works on this subject will illustrate and explain the thesis, notes, and translations that follow. Those examples immediately below are from Mr. Jung Kêng's 殷契卜辭 *Yin Ch'i Pu T'zü*, vol. 3, p. 9, as illustrated in that work.

This list is an adequate selection from the thirty-six forms cited by Jung in three adjoining but separate columns of entries in volume 3. He attempts no identification with any known modern character, but contents himself by saying "Not found in the *Shuo Wêñ*", and inventing a modernized representative, .

There are two preliminary observations to be made on the members of the above group. In the first place the forms numbered 1 and 2 are essentially the same as the Lesser Seal and the modern versions, 占 *chan* "to divine". Only two examples on the Bones are known to me. They are cited by Shang Ch'êng-tsü in his *Yin Hsii Wêñ Tzü Lei Pien*,¹ and occur in Lo Chên-yü's work, vol. 4, p. 25, and vol. 8, p. 14, and Shang, in this following Lo Chên-yü, observes that it is uncertain whether these are identical with those placed within an enclosure, such as Figs. 3 to 6. And his caution seems wise. But, further, these two forms differ from all the remaining ones in being unenclosed in any surrounding outline. Now this surrounding outline varies considerably, and in the simpler instances tends to lose the peculiarity of the original norm, as seen in No. 3.

And this norm was, I am convinced, based and modelled upon a much stylized version of some animal scapula, some such ideal figure as , diagrammatized as . Within this boundary we find several small lines and combinations of lines, thus a diagonal line / in No. 10, and in Nos. 7 and 9 \ or / ; with ノ or ホ below the diagonal ; with ホ *pu* alone ; finally with 占 or 卦 (= 占 *chan*).

¹ 般盧文字類扁, sect. 3, p. 20.

Here, then, we are brought up against the puzzling question, Are all these distinguishable forms variations of a single type, and due to less or more conscious contraction, or are they not? It is the aim of this paper to show that the answer is to negative the single origin, to argue for the existence of two types, and to draw certain conclusions.

The first type appears in the four examples numbered 3 to 6. All the remainder fall under the second.

To my regret I have been hitherto unable to ascertain what is Mr. Kuo Mo-jo's view of this first compound, or with what modern character he would equate it. I must therefore propose my own solution. In the first place I agree with the conclusion of Mr. T'ang Lan 唐蘭, that this type should be read 占 *chan*. And it will be pertinent to add parenthetically a remark by the same writer on the brief and too compressed definition of the *Shuo Wen* of this character 占 *chan*, viz. 視兆問也 *shih chao wen yeh* "to scan the omen and inquire", on which T'ang observes, 則既卜之間 *tsê chi pu chih wen* "so then an inquiry made after the scorching", 已卜得兆發書而占其事也 *i pu té chao fa shu erh chan ch'i shih yeh* "is, after the scorching, getting the omen, and putting it into writing, to apprehend the event". This expansion of Mr. T'ang is lucid and helpful.

To return to the configuration of Type 1. This has been treated by the group of modern Chinese scholars in discussing the character in their comments and notes as though the outline were identical with □ *wei*, the *Shuo Wen*'s 226th Radical and the Kanghsia Dictionary's 31st. Though obviously convenient, this equation is misleading. For the original two sidelines are not parallel, the upper and lower terminals are in no way complementary, and the laterals are mostly continued beyond the upper crossline, and sometimes flare.

At this point I feel the urge to throw my bomb and if it should prove only a damp squib it would only be following a fair number of precedents in earlier numbers of the *Journal*.

I cannot at present prove it, but I suspect that our Type 1 is the actual if not the putative parent of the modern character 骨 *ku* "bone" (Lesser Seal 骨), but only so far as the outline is concerned and not when the whole complex with its contained 占 is in question. When this complex, see Figs. 3 to 6, is examined, it is found to occur frequently on the Bones in one phrase of three words, and in that phrase only. Assuming provisionally the equation of those Figs. 3 to 6 with 占 *chan*, we shall find that this phrase is always introductory to passages of varying length and import. It runs thus in modern Chinese, 王 占 曰 *Wang chan yueh* "The Royal response says . . ." If the equation with 占 *chan* is challenged the only possible alternative word that I can see would be 兆 *chao* "omen", a character that has not yet been discovered on the Honan inscriptions. If 兆 *chao* and not 占 *chan* were accepted as the reading, the sense of the formula would be left unchanged, for the context would provide a pragmatic justification of the word "response" in either case. We take note that the words, "The Royal response says," is sometimes followed by the character 吉 *chi* "favourable", "auspicious", but sometimes other and longer clauses form the predicate.

Finally, before leaving this initial formula of three words, it is necessary to ask who is meant by Wang, the King, whose response follows immediately? At first sight we should take it to refer to the reigning Shang Sovereign. But this would be to misunderstand the term as here used. For just as the expression 王賓 *Wang Pin* "the Royal guest", continually occurring on the Honan Relics, and connoting an apotheosized ancestor, does not refer to living "Princely guests", as the earlier Chinese commentators (followed by Legge) supposed,¹ but to those unseen but prepotent Presences whose favour and help it was a pious and not quite disinterested duty to beseech

¹ See Legge's *Chinese Classics*, vol. 3, part 2, p. 452.

with prayer and appetizing adjuncts.¹ So here in the case before us the royalty 王 Wang is not the Sovereign regnant, but a deceased descendant in the same genealogical line. To conclude otherwise would be to suppose that a Shang-Yin King would maintain a staff of expert diviners, as we know these rulers did, and then, the case arising, refuse or neglect to make use of their services.

* * * * *

We come to the scrutiny of the second type, Figs. 7 to 13.

This, as regards its *outline*, is either identical with that of Type 1, or a mere simplified contraction of it. But as a complex it stands for an entirely different word. But what word? And here I propose to let Mr. Kuo Mo-jo explain his views and conclusions on the character 𠂔 in his own way in a note on Bone 1428, translated from the passage on p. 189 of his 殷契粹編考釋 Yin Ch'i Sui Pien K'ao Shih. He writes: "The character 𠂔 I for a long time deciphered as 縱 chou or yu, holding that it depicted the omen marks presented by the scorching of bone. Later, on certain characters incised on an articular concave surface, 骨白 ku chiu, I found a passage running thus ☰ and deciphered

the latter form as 𠂔 kua, signifying 骨竈 ku wo 'bone cavity'. The form 𠂔, being a carelessly written version of these two examples 𠂔, 𠂔 [which both occur on Bone 1428
a b

in the collection Kuo is describing], becomes when abridged 𠂔 or 𠂔. Hence we may suspect that wherever we find the couplet 巳 𠂔 it is always 亡 𠂔, to be read as 無彌

¹ See my "Sovereigns of the Shang Dynasty", in *JRAS.*, January, 1917, p. 85.

wu huo [= 無 祛 *wu huo*] ‘no mischance’. But unfortunately there was no absolute proof. Now that we have this specimen before us [viz. Bone 1428, see above, Figs. *a* and *b*], this suspicion becomes a positive certainty.

“In the oracular sentences the formula 貞旬亡卜 *chèng hsün wu huo* ‘Inquired whether in the coming ten days there would be no mischance’, occurs numberless times, but on the Bone before us the third entry is singular in having 火 *huo* ‘fire’, as the last character. Now 火 *huo* and 獸 *huo* are of the same phonetic series 同 紐 *t'ung niu* [viz. in this case gutturals], while their finals are also very near. And in archaic speech 火 *huo* was pronounced *huai* [Kuo writes this in alphabetic script], and 獸 *huo* was pronounced *hua* [sic], so that they were mutually borrowable, 故 得 通 假 *ku tê t'ung chia*. Hence, that 卜 is 冂 *kua* and is [also] 獸 *huo* cannot be disputed, 是 則 卜 之 爲 冂 爲 獸 確 不 可 易 矣. By the time of 帝 乙 *Ti I* (the penultimate Shang-Yin sovereign, approx. 1191 B.C.), for the character

卜 was substituted the character 犀. This form is composed with an animal shape resembling a dog, but, in fact, *not* a dog. I,” Kuo continues, “at first deciphered this as 獻 *yu*, but now find the truth to be that it is a pictogram plus 冂 *kua* as phonetic, and thus is¹ the syllable 獸 *kuo* of the term 獸然 *kuo jan*, 乃 獸 然 之 獸 也 *nai kuo-jan chih kuo yeh*.” [Probably the Proboscis monkey, *Nasalis larvatus*.]

I must summarize Kuo’s more detailed final paragraph of the argument. The *kuo-jan*, he maintains, is a kind of ape like the 獠 *wu*, which has an upturned proboscis and long tail 仰 鼻 長 尾 *yang pi ch'ang wei*, a description exactly suiting the pictographic part of 犀, which composite must therefore be 獸 *kuo*, and in virtue of the principle of borrowing characters having the same finals, would be 獸 *huo* “mishap”, 而 以 同 音 假 借 爲 獸 *erh i t'ung yin chia chieh wei huo*.

¹ “thus stands for” is what the writer really means.

"In this way," he says, "the characters meet the requirements exactly, 如此則字字順適矣 *ju tz'u tsê tz'u tz'u shun shih i.*" Thus Kuo Mo-jo. In the first part of his argument he carries me with him. It is only in his endeavour

to show that  is composed with a figure *not* of a dog but of an ape, and is the original of the character now written 獸 *kuo*, that I have to part company with him. In my view this right-hand element *is* meant for dog, and when compared with other comparable forms is indistinguishable from that character when in combination. What is more, Kanghsí's Dictionary supports me by containing the modern representative 狐 *wo* "name of a dog". However, whether the beast apparently climbing up the character  is a dog or an ape is immaterial to my present purpose, for both Mr. Kuo and myself agree that the left-hand element is in modern guise  said to be read *kua*. (According to the *Shuo Wen*, this meant to scrape the flesh from a man's body and dispose of the bones 置其骨也 *chih ch'i ku yeh*.)

At this point we must note the existence of a rare, perhaps unique, compound, , reasonably treated by Mr. Kuo as the forerunner of the well-known so-called phonetic  *kua*, explained by the *Shuo Wen* as "a twisted mouth", perhaps an explanation by Hsü Shén at a venture. At any rate, that cannot account for its appearance, preceded by 王 *wang* "royal" on the fragment illustrated by Kuo Mo-jo on his No. 1427. Here it stands in a desolate isolation near a jagged fracture, and what the two characters of the truncated entry are trying to say we do not know, but certainly it was not "The king with the twisted mouth".

Before emerging from the ossuary in which our explorations have been conducted, we should turn a flashlight on two rather commonplace characters 別 *pieh* and 罷 *ngéh* (according to Karlgren the ancient reading was *ngát*), but later and now *tai* "bad". No one would suppose that the first of these

characters, 別 *pieh*, had anything to do with bones whether complete or in fragments. But it had, before the *li*, or modernized writing had disguised its left side from the original 冂 *kua* to the present erroneous 另 *ling*, which should have been 𠔁, the intermediate form preserved by the 玉篇 *Yü P'ien* Dictionary. Kanghsi inserts 分解 *fēn chieh* as the original transcription of *pieh*, defined by the *Shuo Wen* as 分解也 *fēn chieh yeh* “to divide by disparting”, a tautological expression certainly, but a painfully exact rendering in English nevertheless.

The other remaining character is 死 *tai* and need not detain us long. The modern form should have been 死, representing the Lesser Seal 彳, which itself is a scarcely modified shaping of the component in  and  ssū 死 “dead”, where a slight simplification of 冂 *kua* is seen.¹

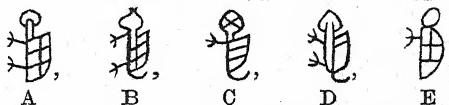

This paper concludes with a strange compound character which unfortunately has not been “liquidated”, and far from being reduced to a solution, must remain for the present in a sticky and colloidal condition. This character is uncommon and occurs only on the Honan Bones, and there only in a single formula, it is 占 and 且, a combination of a trifling variation of what we have seen above to be 冂 *kua*, and a unique minimal curve, detached but placed close to the right-hand lower corner of the *kua*. This tiny adjunct is unknown elsewhere, and its functional purpose is not clear. Another noticeable fact about this character, and about the formula in which it is the second word, is its obvious analogy with the second word of the formula given on p. 416, which runs 王 占 曰 吉 *wang chan yueh chi* “The Royal Response says Favourable”. So in this other formula we find 王 且 曰 吉 *wang [?] yueh chi*, in other instances 大 吉 *ta chi* or 弘 吉 *hung chi* “greatly favourable” or “vastly favourable”.

¹ See *Lo Chén-yü, Hou Pien* 下, p. 32, and *Ch'ien Pien*, 5, 41.

Clearly in these two formulas we have two almost identical or closely similar predication (which are also predictions) by the royal and ancestral respondent, though this does not enable us to equate the second character with a modern equivalent. But it greatly narrows the field of choice. And further it provides a reason why I cannot accept the conjecture or suggestion of Kuo Mo-jo¹ that 𠙴 is the primitive form of 𠂔 chi (in the *Shuo Wen* written 𠂔), for the *Shuo Wen*'s definition of the latter character is 卜以問疑也 *pu i wén i yeh* "by the scorching process to inquire about doubtful matters". This is a definitely questioning procedure and would not make sense if adopted in the formula above.

I had originally meant to end here, not because I had nothing more to say, but because the available evidence regarding the above character 𠙴 did not to me seem sufficiently favourable to a long entertained suspicion on my part of the real structure and meaning of this ambiguous form to warrant my propounding it in this *Journal*. But quite lately chance, where I could least have expected to meet it, seems now to justify me in urging a more confident argument.

This is in short that our ambiguous character is an ancient variant of the character 龜 *kuei* "tortoise", but not a variant of the normal ancient type such as appears below.²

Quite otherwise in fact, and if a tortoise at all, one of strong nonconformist tendencies, in whose testudinal convictions legs are a vanity suited only to those frivolous congeners who are marsh-bound and of the mud muddy. When the legs have been liquidated as superfluous, and the head modified

¹ Cited in the 甲骨學 (文字編), *Chia Ku Hsueh (Wén Tzü Pien)*, sect. 3, p. 21.

² A: *Tsang Kuei Chih Yü*, p. 17. B: *Yin Ch'i I Ts'un*, Bone 959. C: *Yin Hsü Shu Ch'i*, 4, 55. D: *Yin Hsü Shu Ch'i*, *Hou Pien* 𠂔, p. 19. E: *Yin Hsü Shu Ch'i*, 4, 54.

as in Fig. E, there remain the body and the tail. With regard to the former of these, we may take ䷂ as a fair average norm, and it is a reasonable supposition that the main element of our ambiguous form is based on this, and not, as Kuo Mo-jo assumes, on the early script of ䷂ *kua*. There is still the small curling tail, present in most of the variants, to be accounted for. In my view this small tail reappears as the insignificant detached arc curving round the right-hand lower corner of our form, always very close to it though not adhering. Surely this interpretation is to be preferred to Kuo Mo-jo's equation with ䷃ *i*. I am confident that no such variant of ䷃, of such a simple curvature and of such a disproportion to the main element of the complex, can be anywhere found. But if this little curve really represents a tail, the main component must be the body to which it was attached, and consequently the body of a tortoise, for there can be no question, the context being what it is, of any other animal.

One final, and to me convincing, link in my equation is afforded by a variant of 龜 *kuei*, namely ䷂, described by Eitel in his dictionary of the Canton dialect, as "vulgarily also written". It may be vulgar, but like other vulgarities it must own an ancient lineage as well as a current vogue, for it is used by that ultra modern scholar Kuo Mo-jo himself. In aspect it is a not much altered version of our ambiguous form, and it further undoubtedly represents *kuei*, the tortoise. And so we can return to our second formula, which I now render in modern Chinese 王 龜 曰 吉 *Wang kuei yüeh chi*, and in English literally, "The Royal Tortoise says Favourable," or, idiomatically, "The Royal Tortoise predicts Good Fortune." Such is the ancestral message before us, not one of those "ancestral voices prophesying war" that Coleridge dreamt of, but breathing a happier future and foretelling coming events that would be favourable and fair.

MISCELLANEOUS COMMUNICATIONS

NOTE ON REMAINS OF ROME'S MESOPOTAMIAN *LIMES* SURVEYED IN IRĀQ TERRITORY

When reviewing the results of the remarkable researches carried out by Père A. Poidebard, S.J., on the Roman *Limes* defending the province of Syria, as recorded in his masterly work "La Trace de Rome dans le désert de Syrie" (see *Geographical Journal*, January, 1936), I had pointed out how desirable it was to extend this archaeological survey of Rome's easternmost frontier defences to those territories which are or until recent years have been under a British mandate. My attention had been attracted to this congenial task partly by the explorations I had been able to carry out on my second and third Central Asian journeys on the protected route line of Han times, a true *Limes*, which served China's earliest expansion into Turkestan through the desert, and partly by what a rapid tour in 1929 had shown me of the Syrian portion of the Jazīrah and the desert south of the Euphrates.

P. Poidebard's protracted and very fruitful labours, carried out mainly with the help of the French Air Force in the Levant, had strikingly demonstrated the paramount importance of aerial observation for tracing such remains of ancient protected routes on desert ground. Thanks largely to the support of the British Academy, the Society of Antiquaries, and the Royal Geographical Society, it became possible to secure favourable consideration at the Air Ministry for the proposed survey as far as it involved help of the Royal Air Force.

Several practical reasons induced me to select for the initial portion of the task that *Limes* section which was to be looked for within Irāq territory between the Tigris and the Euphrates. The requisite permission for this survey was readily granted by the Irāq Government, on the recommendation of Mr. C. J. Edmonds, Adviser in the Ministry of the Interior, an Orientalist scholar of distinction. Arrangements

for survey work on the ground were greatly facilitated by the Irāq Petroleum Company which is interested in that area, generously according the loan of the services of Surveyor Iltifat Husain, late of the Survey of India, and of the requisite motor transport.

Regard for climatic conditions had indicated the months following the winter rains as specially suitable for the work in view. After a preliminary stay above Beirut had enabled me to profit much by Père Poidebard's experienced advice, and at the same time to acquire a modicum of practice in colloquial Arabic, I reached Baghdad at the close of February. On a visit paid to the Royal Air Force Headquarters at Dhibban, Air Vice-Marshal C. L. Courtney, C.B., C.B.E., D.S.O., Air Officer Commanding British Forces in Irāq, kindly sanctioned the use for the proposed survey of a "Vincent" aeroplane suited to carry, besides pilot and photographer, myself as observer. In order to assure needful facilities of communication between the Irāqi Aerodrome at Mosul, where the machine had to be based, and my camp, mainly on desert ground, a wireless telegraph installation was attached to my party.

It was solely due to the ever effective help thus afforded by the Royal Air Force that it became possible within less than two and a half months, in spite of adverse atmospheric conditions prevailing at times, to search by a long succession of flights an area extending approximately over 120 miles from north-west to south-east and 90 miles across with adequate care. I have reason to feel particularly grateful for the aid of Pilot Officer H. M. Hunt, R.A.F., who by his keen interest in the task soon proved a very helpful collaborator. The large series of aerial photographs secured were of great help in the field, and constitute a very valuable record. For all these advantages I owe a heavy debt of gratitude to the Royal Air Force.

The close examination on the ground of the widely scattered remains of Roman military stations, watch posts, and roads, and their exact location on the map provided an interesting

but also exacting task. Most of these remains were found on what is now trackless desert. Characteristic regular features made them readily recognizable from the air. But on the ground the abundant if short-lived growth of desert vegetation, following a season of unusual rainfall, was often apt to screen them until approached quite close. The prolonged motor drives needed for this search were impeded by the broken nature of the ground, much cut up by *wādīs*. Scantiness of water and the brackishness of such as could be found in wells or drainage beds made it difficult to find suitable camping places.

As regards the results of our survey the briefest indications must suffice here. A safe starting point was provided by the site of ancient *Singara*, the present Balad Sinjar, indicated by classical records as a main Roman base on this *Limes*. Close examination proved the ruined walls and bastions of the small town to be Roman in plan and foundations. A main protected line of the *Limes* was traced passing along the southern foot of the rugged Sinjar hill range and resting its flank on a marked westerly bend of the Tigris at "Old Mosul". In the desert plain to the south a string of advanced *castella* was traced forming an "Exterior *Limes*". It linked up in the west with the Roman defensive line along the Khabur river.

It was from the south-east, in the direction of the great Parthian stronghold of Hatra, still imposing in its ruins, that the danger of invasion chiefly threatened Roman territory. Hence special interest attached to the discovery of a series of *castella* pushed out into the desert towards Hatra. They were meant to guard gaps in the low hills flanking cultivated strips along the right bank of the Tigris. The wide open belt of fertile land to the north-west of Mosul had in Roman times, just as now, formed a natural corridor between the upper Mesopotamian plain and Northern Syria. Along it lay a main line of advance both for Parthian or Sāsānian invasions and for Roman offensives. It was significant to find that

this important line of communication leading from the vicinity of Mosul to Nisibin, the ancient Roman stronghold of Nisibis, and now followed by a railway under construction, was guarded by a succession of Roman fortified stations. Here, too, our survey linked up closely with the system of *Limes* roads which Père Poidebard had determined on the other side of the present Syro-Iraq frontier.

The increasing heat of May made me feel glad when my task on this ground was concluded. Its continuation by the Euphrates is an aim which I eagerly hope to see realized in the Autumn, if Fate is kind.

AUREL STEIN.

THE EARLIEST JAIN SCULPTURES IN KĀTHIĀWĀR

(PLATES III-IV)

While exploring Kāthiāwār for its antiquarian remains Burgess visited Dhank.¹ There, in a ravine, west of the hill near the modern town, he found a few sculptures cut out in low relief in cells and also on the face of the calcareous rock. He described these in his *Report*,² but published no photographs or drawings. Not satisfied with his description I decided to visit the place while on a similar tour as his.³ On examining the sculptures I found that they were not Buddhist, as Burgess thought them to be,⁴ but Jain. Moreover, they seem to be the earliest specimens of this or of any other school of sculpture found in Kāthiāwār.

The discussion may begin with the sculptures in cells

¹ A small sub-state, under a *darbār*, 30 miles W.N.W. from Junāgarh, in Gondal State. Formerly the place was known as Tilatila Paṭṭan. Traces of its ancient greatness besides the caves (to be described presently) are none as such. But even now, whenever the place is dug up for laying the foundation of a building, etc., images of the Jain and Hindu pantheons and remains of old houses are found.

² "Antiquities of Kachh and Kathiawad," *ASWI.*, vol. ii, p. 150.

³ Here I take the opportunity to thank Mr. Sambhuprasad Desai who kindly accompanied me all the way from Junāgarh; also Mr. Gordhandas Malaviya and the late Darbar of Dhank for their hospitality.

⁴ Burgess, op. cit., p. 150.

carved at the lower end of the hill. Here the first cave¹ has a small opening, about 4 feet high. Inside the cell, 7 ft. 9 in. by 8 ft. 4 in., there are three niches, one facing the opening and one on either side of it. Each side-niche has a nude (?)² figure seated in *padmāsana* (cross-legged) posture, its body erect and motionless. The right hand is placed over the left in the lap, with palm upwards. Over the head is a triple umbrella, shown by three strokes; on each side is a *cāmara*-bearer, and small *vidyādhara*s are above. The figure in the central niche is similarly seated on a *sinhāsana*, with a *cāmara*-bearer on each side. Burgess identified these sculptures as figures of Buddha. But they seem to be of Jain Tīrthaṅkaras, because, firstly, they are nude; secondly, their *mudrā*, the gesture of the hands, is typical of a Jain Tīrthaṅkara; lastly they are identical with the figures on the adjoining hill, which, as will be shown below, are undoubtedly those of Jain Tīrthaṅkaras. These figures, therefore, probably represent Ādinātha (Rśabhadeva), as there are two lions; the central symbol—the bull—is perhaps missing.³ Unfortunately, the heads of the figures are so weathered as to give no indication about the manner of wearing the hair, which would have made the comparison with Mathurā sculptures easier and would have been a fair index of the age of the figures.⁴

Higher up the ravine, there are a number of sculptures in very low relief on the face of the rock.⁵ Beginning from the lower end again, first there is a “woman”⁶ with a child on her

¹ The photograph is not clear enough for reproduction.

² It is difficult to be definite on this point. Some fifty years ago Burgess saw traces of drapery, etc., while at present there are none. On the analogy of the wall-figures on the adjoining hill I am inclined to think that the figures were originally nude.

³ Two lions on either side of a bull are found on an early image (*circa* A.D. 150) of Ādinātha from the Jain *stūpa* at Mathurā. See Vincent Smith, “The Jain Stupa and other Antiquities of Mathura,” *Arch. Survey of India*, vol. xx, pl. xcvi. If there were only one lion, the figure should have been identified with that of Mahāvīra.

⁴ In early Jain figures, the hair is worn in rolls or curls, but later it develops into a conventional style known as *usnīsa*.

⁵ See Pls. III and IV.

⁶ See Pl. III.

left knee, her right elbow resting on her right knee, and her hand pointing up. She has heavy ear-rings, and apparently a frontal ornament in the parting of her hair, which is wavy and clustering". Burgess left her unidentified. She is evidently the goddess Āmbā or Āmbikā, the Great Mother, who is usually sculptured with a child in Jain iconography. Figures of her have been found in the Jain *stūpa* at Mathurā,¹ and are an invariable feature of medieval Jain sculpture and painting.²

Adjoining Āmbikā is a nude figure,³ 27 inches high. It stands in *kāyotsarga* (meditation) pose on a triple-cut, pillow-like stool. The body is held erect and the arms hang down on either side. From behind the stool rises a serpent in five coils and makes a canopy of seven hoods over the head of the standing figure. The figure should be identified with that of the 23rd Jain Tīrthāṅkara, Pārśvanātha. Though it is common in Jain sculpture, the manner of representing the coils of the serpent is unique.⁴

To the right of Pārśvanātha is a small sitting figure about 8 inches high.⁵ Close to this is a nude figure⁶ in *padmāsana* posture; its right hand is laid over the left in the lap with the palm upwards. The *sinhāsana* has a wheel and deer in the

¹ Smith, op. cit., pl. xcvi. Note that the sitting posture of the goddess as well as of the child and the lion are identical.

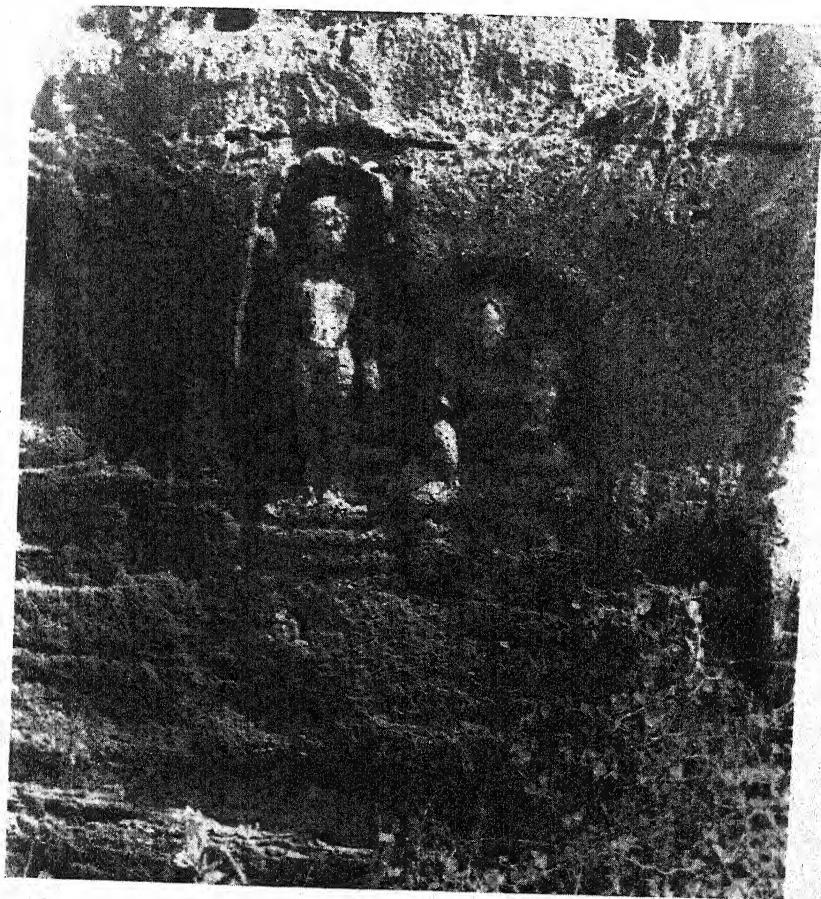

² A similar figure is found at Elura, ASWI., vol. v, pl. xl, fig. 2, and at Ankai caves. Ibid., p. 58. For paintings see Nawab, *Jain Citrakalpadruma*, fig. 45.

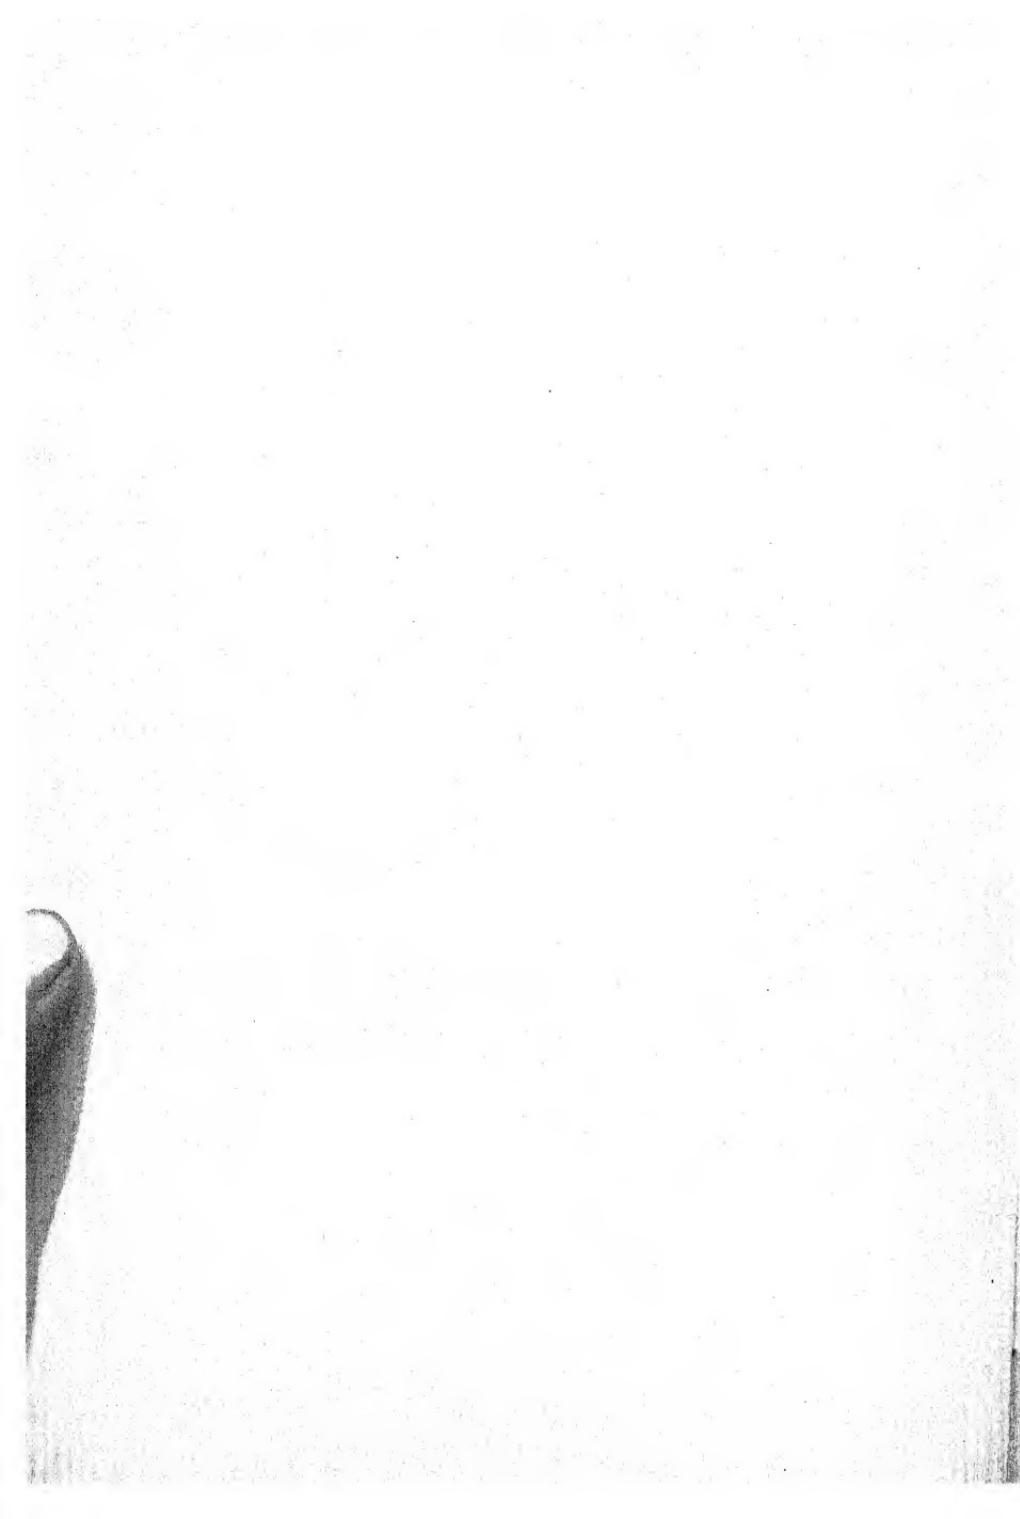

³ See fig. Pl. III.

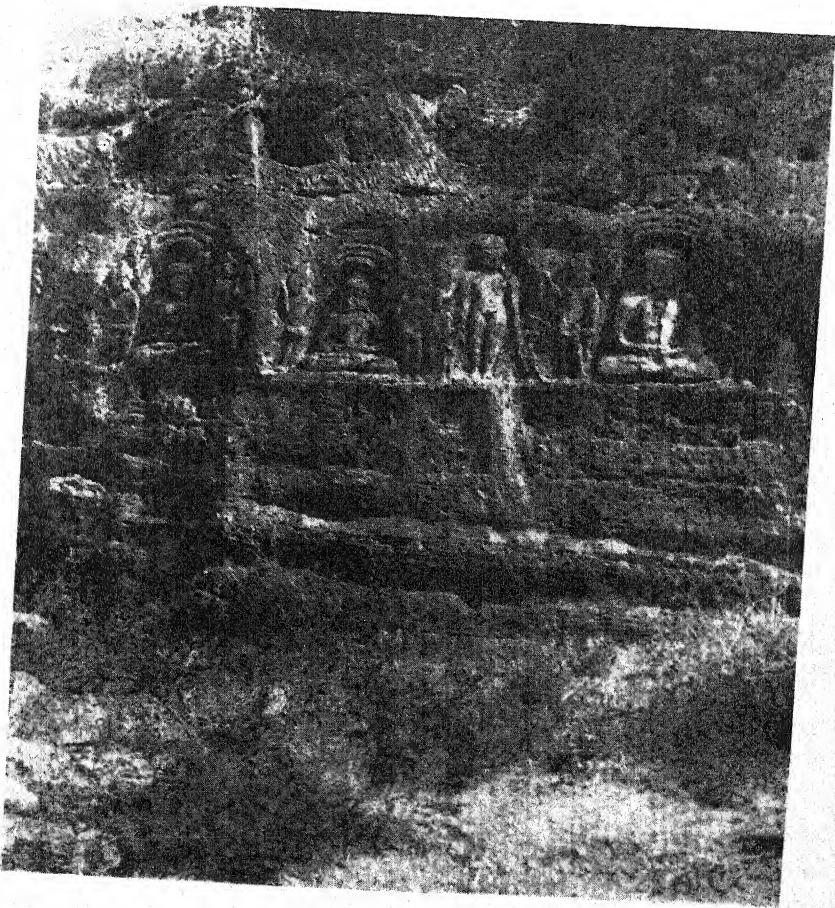

⁴ At Bharhut, the folds are similar but are two only (Cunningham, *The Stupa of Bharhut*, pl. xxviii). At Amarāvatī (Fergusson, *Tree and Serpent Worship*, pl. lxxvi) they are different. At Bādāmi (ASWI., "1874 Report, Belgam and Kaladgi," pl. xxxvi, fig. 3) the similarity is close, but the representation of the serpent is different. At Elura (Fergusson, *Cave Temples of India*, pl. lxxxvi) Pārśvanātha stands on a two-decked ornamental stool, but the serpent is very dissimilar from that at Dhank. It is interesting to note in this connection that a serpent with similar folds but without the hood is noticed on Roman coins of Tralles (Fergusson, op. cit., p. 19, No. 2), and on an image from Gwalior in the Indian Museum, South Kensington, London. Also, cf. Takshaka, from Takshakesvara, Indore State, where the folds are similar. ASIWC., 1920, pl. xiii; also p. 80.

⁵ See Pl. III.

⁶ See Pl. IV.

centre and a lion at each end. Over the head is a triple umbrella shown by three strokes. On either side is an attendant standing with a *cāmara* in his hand. I fail to notice "folds of the drapery of the seat hanging down" and "tuft of hair" on the head, as described by Burgess. Again, his identification of the figure as Buddha is to be discarded, though the symbols—wheel and deer—suggest it.¹ The deer is a *lāñchana* (symbol) of the Jain Tīrthaṅkara Śāntinātha. An identical figure is found in the late medieval Ankai caves.² The Dhank sculpture, therefore, seems to be no other than the 16th Tīrthaṅkara of the Śvetāmbara Jains, or Ara (whose *lāñchana* is also a deer) the 18th Tīrthaṅkara of the Digambara Jains.

Adjoining this is a nude figure³ standing in *kāyotsarga* pose. On either side is an attendant. It has long ears and ringlets of hair over each shoulder. It is a Jain Tīrthaṅkara; but it is difficult to say which in the absence of any *lāñchana*. The two following are again Jain Tīrthaṅkaras.⁴ And the last two⁵ are similar, but noteworthy for the "disproportionately big heads" of the *cāmara*-bearers and the three lions on the *simhāsana*, and the wheel that is carved below the central lion. Three lions make the identification difficult and uncertain. One lion on either side and a bull in the centre is the symbol of Ādinātha; and a lion in the centre, of Mahāvīra. Probably the figure is of the latter.⁶

Are the attendants of these figures ordinary *cāmara*-bearers, or *yakṣas* and *yakṣinīs*, who are associated with Tīrthaṅkaras both in the Śvetāmbara and Digambara Jain iconography? Indications for the second alternative are

¹ And even the wheel was worshipped by the Jains as is attested by numerous Jain sculptures from Mathurā. See Vogel, *Catalogue, Mathura*, p. 70.

² Fergusson, *Cave Temples of India*, p. 507.

³ See Pl. IV.

⁴ See Pl. IV.

⁵ These have not come out in the photograph.

⁶ Though Burgess finds great likeness in these figures with those of the Jinas at Bādāmi, Aihole, and Ajanta, he calls them Buddhas! *AKK.*, p. 151.

extremely few—only the high tapering head-dresses.¹ Excepting these, we miss the various attributes and weapons that are said to be found with *yakṣas* and *yakṣinīs*.² Moreover, there do not seem to be any *yakṣinīs* among the Dhank figures. It is possible, nevertheless, that the attendant figures do represent *yakṣas*, but they lack the decorative details. These must have been introduced into the Jain iconography at a much later period, as in the case of Hindu and Buddhist iconography; whereas the figures, both of Tīrthaṅkaras and attendants, belong to an earlier period. The same reason also accounts for the absence of *yakṣinīs*.

The rock sculptures at Dhank, therefore, are not Buddhist but Jain. But the fact that they seem to be the work of monks who were Digambaras, as many of the figures are without doubt *nirvāstra*, is surprising. For Digambara Jainism is never found to be strong in either Gujarāt or Kāthiāwār. It is not so at present, nor was it so under the Chaulukyas (*circa* A.D. 1000–1250). It is probable that Digambara Jainism was flourishing in these parts at a much earlier period—probably under the Kṣatrapas (*circa* A.D. 100–300), as the existence of Jain monks and nuns (the latter, of course, belonged to the Śvetāmbara school) is evidenced by inscriptions.³

Stylistically also the sculptures belong to the early fourth century, between the Kuśānas (or Kṣatrapas) and the Guptas. The posture of the Jain Tīrthaṅkaras (seated or standing) does not tell us much, being conventional. It compares, however, favourably with the Mathurā images.

Dhank sculptures, hitherto barely noticed, open up a new chapter in the history of Kāthiāwār sculpture.

¹ Cf. Burgess, *Digambara Jain Iconography*, p. 5. "All the Yakshas and Yakshinīs have similar high tapering head-dresses."

A FEW CORRECTIONS IN THE ENGLISH TRANSLATION
AND TRANSLITERATION OF THE CHRONOGRAPHY OF
GREGORY ABŪ'L FARAJ (BAR HEBRAEUS)

Mr. H. Kurdian sends the following corrections of the late E. W. Budge's *Chronography of Barhebraeus* :—

i, 237 : "One Khōj (i.e. lord) Basil, that is to say thief, who held Khishum and Ra'ban." The word *Khōj* is not, as Budge thought, the Persian *khwāja*, but the Armenian *qənq kogh*, "thief."

i, 371 : "Toros (Theodorus ?), the Armenian, the governor of Cilicia." The suggestion in parentheses is unnecessary, since the person referred to is Toros I, prince of Cilicia, A.D. 1099–1129.

i, 371 : "Adhōrbijān and 'Arrān (Arzān ?)." Arran is a district in Caucasian or Eastern Greater Armenia, whence the suggestion in parentheses is erroneous.

i, 375 : "The year six hundred and sixty-eight of the Armenians." This synchronizes with A.D. 1219. This is the only occasion on which B.H. uses the Armenian era in this work.

i, 505 : "righteous king Hitam (II ?) of Cilicia." The name should be spelt Haitum, and the reference is to the second king of Cilicia of that name (A.D. 1289–1297). The query is therefore unnecessary.

i, 375 : "Whose name was Zabil (Isabel ?)." The name should be read Zabel; the form Isabel is not used in Armenian.

REVIEWS OF BOOKS

Near East

TELL EDFOU. By MAURICE ALLIOT. (*Fouilles de l'Institut Français d'Archéologie Orientale du Caire. Rapports préliminaires. Tome dixième, deuxième partie.*) 13 × 10, pp. 40, pls. xxiii. Cairo : Imprimerie de l'Institut, 1935.

The preliminary report for the year 1933 of the excavations of the I.F.A.O. at Tell Edfou, directed by M. M. Alliot, announces the discovery of a mastaba of the Old-New Kingdom cemetery of Edfou dated to the reign of Pepi I, the owner of which entered upon his official career in the reign of Isesi of the Fifth Dynasty. A series of stelæ from this tomb, in the chambers of which they had been set up or deposited, shows that the cemetery was in use until the thirteenth dynasty.

The stelæ have been photographed and the texts from them and from the mastaba of Isi are published here. Two texts, however, Nos. 21 and 22, appear to come from stelæ which have not been photographed and are unaccounted for in the description. The inclusion of a scale in the photographs and of an index of references to the text in the list of plates would have been welcome. The titles of Pl. XV, 4, and XVIII, 1, have been inadvertently allowed to change places.

A. 666.

M. F. LAMING MACADAM.

DICTIONNAIRE ARABE-FRANÇAIS. *Dialectes de Syrie : Alep, Damas, Liban, Jérusalem.* By A. BARTHÉLEMY. Haut-Commissariat de France en Syrie et au Liban : Instruction Publique. 12 $\frac{1}{4}$ × 10, pp. xii + 224. Paris : Paul Geuthner, 1935. Frs. 45.

At last we have a dictionary of Syrian Arabic worthy the name, and it has wide margins for notes. The words are arranged under roots; the roots are in Arabic type in a

column by themselves (the choice of the root form in foreign words is arbitrary); the words are in a phonetic script; and the meanings are set out clearly with lots of idioms. The form in classical Arabic is given, and for foreign words the derivation whenever possible. Cookery recipes and bits of folklore are included. There is no preface to explain the principles which guided the work, so that one can only record the fact that in some places the note *mot savant* is surprising. There are many things to be noted for the history of language. Some sounds have become more emphatic, e.g.: > جدار, آذار > آذار > جرع > جرؤ, طراب > تراب, جرص > جرس, جضار.

Others have become weaker, e.g.: طریق > تریق, عهد > اهد. One sound has developed differently in two forms of the same word, e.g. جتّه has become in the singular جسّه but in the plural جسّاس. The change of غ to خ (خسل > غسل) has parallels in classical Arabic. The new meanings given under اهل and جحش are interesting developments. Quadrilateral roots are common.

A few criticisms can be made. On pp. 218-19 the roots have been left out. There is no reason for giving ابب and اخخ as the roots of *ab* and *akh* respectively. It would have been better to put all the words from the roots ایش, اش, ایش, اشی together, with cross-references if necessary. Probably the meaning of بخ has been softened down, and the word has nothing to do with بکع. Surely the common form is *bidak* and not *b'idak*. By this time بیدن might be naturalized in Arabic, for it is at home in the classical language and presumably came into the colloquial from it. There are omissions; *yōkul*, the imperfect of اکل, is used in Jerusalem, جلس “to sit straight” as opposed to lolling, and even

in its modern form *صَلِّ*. That some of the words seem to be borrowed from Syriac starts interesting speculation. Though one can find weaknesses, this dictionary is far and away better than anything existing, and it is to be hoped that it will soon be all published.

A. S. TRITTON.

FAKHR AD-DİN II E LA CORTE DI TOSCANA. Vol. I. By PAOLO CARALI. Reale Accademia d'Italia, Studie Documenti, 5. 10 x 7, pp. 489, pl. i. Roma : Reale Accademia d'Italia, 1936. L. 50.

A search among Italian archives has brought to light many documents relating to Fakhr ad-Din, the Druse emir of Lebanon. The editor has published in this volume a selection of them and has written a series of essays on the life and policy of Fakhr ad-Din as an introduction. He calls this the first volume ; the second is to be an Arabic translation of it. The only startling novelty is the fact that Fakhr ad-Din was baptized before his death, but the wealth of details accumulated make a living figure of the hero. Contemporaries give opposing accounts of his character ; the editor explains away the contradiction by showing that the unfavourable reports refer to the time when he was in exile in Italy, living on the charity of others, who hoped to use him as a tool to serve their own plans. When he had to rely on his wits alone he might appear a vacillating braggart ; a prince in his own land, he converted most of his talk into realities. Many of the documents show the care which the prince took of agriculture ; there are requests for irrigation engineers, for Italian peasants who will show the people of Lebanon improved methods of tilling the soil, and for cattle to improve the local breed. Fakhr ad-Din's pride in his own estates is seen in the presents to Tuscany of silk from his own garden. His dream of an independent Syria, backed up against Turkey by a Christian kingdom of Palestine and Cyprus, came too soon and collapsed before the

might of Turkey and the quarrels of Christendom. The man who dreamed that dream was a great man ; though he himself perished, yet he left much of his principality to his heirs. A curious incident is his deposit of money in a Florentine bank, money which his successors tried to recover a century later, apparently in vain, for there is no record of what happened in the end. The editor thinks that the money, which must now amount to millions, is still in Italy and is a testimony to the gratitude of Fakhr ad-Din to the hospitable and civilizing Italy. The book is dedicated to Signor Mussolini. There are a number of small misprints, the one English text comes off worst. Otherwise the book is all that a book ought to be, and is, further, a valuable and delightful addition to the history of the time.

A. 784.

A. S. TRITTON.

THE GROWTH OF LITERATURE. By H. MUNRO CHADWICK and N. KERSHAW CHADWICK. Vol. II. 8vo, $6\frac{1}{2} \times 9\frac{1}{2}$, pp. xvii + 783. Cambridge : Cambridge University Press, 1936. Price 30s.

Continuing their search for those "general principles" which "operate in the growth of literature", the authors here examine the oral literatures of Russia and Yugoslavia, and the written of early India and the Hebrews. The latter section of the work alone comes within the province of the Society's studies.

In their analysis of Hebrew literature the authors' lack of expert knowledge vitiates most of their conclusions. They prefer to construct a history of Hebrew letters from a subjective study of the English Bible and from largely obsolete views of the Higher Criticism, instead of starting from the safer ground of archaeological research. Thus, on the basis of Higher Criticism, they state categorically that the earliest Hebrew literature was prose, and not verse. This, however, is vitiated by the recent discovery of the Ras Shamra texts and by the fact that the cultural ancestors of the Hebrews,

viz. the Mesopotamians and earliest Arabs, possess scarcely any literature (in the fullest sense of the word) which is not verse.

Again, the authors tend to isolate the literature of the Old Testament from its cultural environment, and fail to understand that the evolution of the Hebrew literary genius cannot adequately be traced except in relation to the evolution of Hebrew civilization generally, and for this purpose it is necessary to consider it in the cultural context of the Ancient East. Thus, whilst they appreciate the religious *note* in that literature, they fail to appreciate the fact that ancient Semitic literature was of sacral origin, being animated in the first place by the necessity of conserving a standard set of words in ritual. Similarly they do not realize the essentially ritualistic basis of much Semitic myth, or the fact that the seasonal pantomimes enacted in ritual created a body of letters in the form of *libretti*. The Ras Shamra texts are of this class.

Then in discussing the evolution of saga into literature, they do not consider the subject in relation to the actual growth of Israel itself. A modern critic, in examining the stories of the Old Testament, has, above all, to consider the process whereby duplicate sagas, preserved by distinct tribes and caravans, had necessarily to be welded into a single sequence when those tribes and caravans fused together and desired to put their history on record. This, for instance, accounts for the manifest duplications in the stories of Abraham and Isaac, and we have recently been given a glimpse of how an original story, concerning the invasion of the Terachids into Palestine, was transformed by Israelite writers in order to integrate it into the body of their people's distinctive history.

Further, the authors tend to confuse the date of a document with the date of a literary form. Because, for instance, a given psalm, or even body of psalms, may be later than a given piece of prose, or collection of prose writings, this does not imply that *all* psalms are later than *all* prose, or that psalm-writing is *per se* of late date. Many psalms may, indeed, be

Israelitic transformations of very ancient Canaanite hymns, and the analogies from Mesopotamia, together with Jirku's recent discovery of psalm-quotations in the Amarna Letters, should compel caution. The Old Testament does not exhaust Hebrew literature. It is a fortuitous collection, and, because the verse it contains may be later than the prose, this is no more reason for deducing the relative antiquity of each form than for concluding that prose must *ipso facto* be earlier than verse because the works of Hallam may be bound up with those of Browning.

It must also be remembered that the Israelites were only one part of the Hebrews, and hence that their literary forms must be discussed in relation to other monuments of Hebrew literature and that of its prototypes.

Novel is the authors' view that the David-stories must have been written by or for women because of their large dose of feminine interest (Elisheba, Michal, Abishag, etc.). This recalls Samuel Butler's famous argument about the *Odyssey*, and is open to the same objections. "All the world loves a lover", and the intrigues of kings have popular interest not confined to women. What is more, the importance of pedigree and genealogy naturally leads a writer to mention every king's mistress he knows of.

There is an excellent chapter on historical and unhistorical elements in Hebrew saga, and this largely atones for errors elsewhere. One notices, however, that the authors rely for their archæological data on Marston's *The Bible is True*, which is a tendentious volume not free of inaccuracies.

I am incompetent to consider the Indian section of this work, the plan of which follows that pursued in the section reviewed. It is to be hoped that some student in this department will let us have an opinion.

The work is impressive and painstaking, but in so far as Hebrew literature is concerned, it lacks sound basis.

Far East

FUNDAMENTAL PRINCIPLES OF MONGOL LAW. By V. A. RIASANOVSKY. 9 x 6½, pp. 338. Tientsin: Telberg's International Bookstores, 1937.

The author of this valuable work needs no introduction to Orientalists, for his previously published works on Chinese Civil Law and the Customary Law of various Mongol tribes are familiar works of reference. The social anthropologist in particular will be grateful for the indications so clearly given of the development of tribal juridical consciousness and the careful balance established and maintained between obligations and privileges.

To provide a setting for the detailed exposition which follows, the author has written a valuable historical introduction showing Mongolia as a territory in twentieth century times and its relation to its past. Chapter I then discusses the actual records of Mongol Law in a descriptive rather than a literal sense. General and local law and the impact of Chinese legislation thereon and the effects of this influence and the laws of the nomads of the Steppes are all discussed, and much vital information concerning the various tribes, northern (Khalkha), western (Dzungaria), the Buriats and the Kalmucks is adduced in the course of a close examination of the differing legal systems. Chapter II goes somewhat deeper into the records themselves and detailed accounts are given of the Great Yassa of Jenghiz Khan, the ancient Tsādjin Bichik, the Mongol-Oirat Regulations of 1640, and the authoritative Khalkha-Djirom, as well as accounts of supplementary laws and codes up to the present enactments of autonomous Mongolia.

We are then invited to examine the sources of Mongol Law, and the author does not unduly labour the interaction of Mongol Customary Law and Chinese Law. Indeed, it is difficult to see how in the present state of our knowledge this could satisfactorily be investigated and pronounced on by

one so scholarly as Professor Riasanovsky, for the student will pause in his reading here and there to ask himself whether many seeming "central" points of Mongol Customary Law are not in fact decayed Chinese legal principles thinly disguised with a Mongol custom lacquer. A particularly valuable section is that on the Canonical Law of the Lamaists.

An examination of the Fundamental Institutions of Mongol Law is followed by an illuminating series of parallels and notes on comparative jurisprudence. The learned author's fifteen years of research into Mongol Law and Tribal Institutions have led him, through caution, to a shrewd judgment and a satisfying assessment of comparative legal standards and values. There is particular value, therefore, in the sections treating comparatively Mongol Law and Russian Law: Mongol Law and Chinese Law: the law systems of other conquered settled peoples and the law of the nomadic tribes of Asia. An appendix provides excerpts (in translation only) from the text of the Khalkha Djiron so frequently drawn upon in the earlier pages, and the work is rounded off by a valuable bibliography of eleven pages.

It is, perhaps, ungrateful to express the wish that the author had found time to add to his arduous labours the task of preparing a detailed index to this excellent work. But in fairness to the student whose memory is not so good as it might be one must say that so much of value is *hidden* here that it would be well for him, while reading, to prepare his own index and thus save much time in re-reading whole pages to verify one cross-reference. The reader will find some of the material here presented familiar. Professor Riasanovsky has wisely drawn upon his own previous researches and publications in order to present a balanced thesis.

A. 853.

NEVILLE WHYMANT.

PETIT PRÉCIS DE GRAMMAIRE CHINOISE ÉCRITE. By GEORGES MARGOULIES. $7\frac{1}{2} \times 5\frac{1}{4}$, pp. 64. Paris : Librairie d'Amérique et d'Orient, 1934. Frs. 10.

The author of this pamphlet does not claim to have written a complete grammar, but only a guide to foreigners in understanding the structure of a Chinese text, and in helping them to analyse phrases with the object of making grammatical translations of Chinese. He has obviously taken a great deal of trouble to achieve this difficult simplification, but I cannot find that his results are satisfactory. Even in such a small pamphlet, he has tackled serious and important topics in the Chinese language ; these are of necessity so briefly and roughly explained that I doubt the helpfulness to students : the treatment may puzzle rather than elucidate. To my way of thinking, should the book be intended for beginners, these more complicated linguistic problems ought not to have been posed at all ; should it be intended for more advanced students, they should have been dealt with far more comprehensively.

The Chinese *particle* is a linguistic element peculiar to Chinese. It has a great variety of forms and varies in meaning with its position in the sentence, as well as with its context. The writer has included sixty-nine in his small book, but the reader should certainly realize there are many others in wide current use. He claimed to have found the nearest French equivalent to these particles, but his findings hardly cover the variety of meanings commonly employed. For instance, he says of the first particle 夫, "caractère à des emplois variés," but does not give a nearly clear enough definition of these uses, and it would be very hard for an average student to understand the implication of the character 夫 in the following sentences, either as to meaning or grammatical construction :—

- 夫天地者，萬物之逆旅。(李白春夜宴桃李園序)
- 仁夫，公子重耳(檀弓)
- 來，吾導夫先路(離騷)
- 加夫橈與劍焉(禮記少儀)
- 甚矣夫，人之難說也，道之難明邪！(莊子天運)

The author is wise not to involve himself and his readers in the complicated uses of the particles, but it is no way of helping students to meet their difficulties in construing and constructing Chinese.

The explanation of Parallelism and Rhythm in the Chinese language is also rather obscure, mainly for the reason that it is over-simplified. The structure of a Chinese sentence is largely a matter of musical ear and of instinct derived from wide reading. There are few sentences so symmetrically put together as Dr. Margoulies makes out, nor is it true that the particles form no great part in parallelism.

I should not advise a student of Chinese who is just beginning his work on grammar to use this little pamphlet, since it attempts problems above his head.

A. 464.

CHIANG YEE.

GREAT BRITAIN AND CHINA, 1833-1860. By W. C. COSTIN, M.A., Fellow of St. John's College, Oxford. 9 x 6, pp. 362 + vi, with a bibliography, index, and 3 maps. Oxford : The Clarendon Press, 1937. 15s.

A very useful work, clearly and concisely written, and eminently easy to read.

Of the eight chapters, apart from introduction and epilogue, into which it is divided the first covers the period from 1834 to 1839, in which year the consistently intransigent attitude of the Chinese authorities over questions of trade, residence, and jurisdiction led to the outbreak of hostilities with Great Britain. The second describes the fighting which followed and carries the narrative to the point at which the Chinese unwillingly signed the Treaty of Nanking. Despite, however, the reverse their arms had just suffered, contempt for the "red-haired" barbarians remained completely unchanged ; nothing was further from their intention than the implementing

of the terms of the treaty to which they had become a party ; and in the third and fourth chapters of the book will be found an account of the " period of strain " which was the inevitable consequence. The culminating point was the affair of the lorcha " Arrow " in 1856 (v. Cap. V) ; when once again Great Britain, but on this occasion in company with France, found herself involved in armed strife with China. Canton was occupied by the allied forces, and a move was made to the north, where the Taku forts were also taken. Fresh treaties were then negotiated ; but the Chinese were bitterly opposed, *inter alia*, to the clause in them providing for the residence in Peking of the representatives of the various Powers ; and when in 1859 Mr. Bruce, the first British Minister to China, arrived at Tientsin on his way to Peking to exchange ratifications, he found the river Peiho barred against him. An attempt to force a passage ended in failure, and the British and French envoys thereupon retired " defeated and frustrated " to Shanghai. An account of these events will be found in Chapters VI and VII (Lord Elgin's First Mission and Mr. Bruce's Mission). On the receipt of the news of this reverse the British and French Governments promptly determined on decisive measures. Chapter VIII describes what thereupon happened—the dispatch of Lord Elgin for a second time, the preparation of an adequate allied force, the capture of the forts at Taku, the occupation of Peking, and the burning of the Imperial Summer Palace. Then at last the Chinese capitulated ; a Peace Convention was signed in the capital, and the treaty of 1858 was finally ratified. The history of later years was, however, to demonstrate that the old spirit of hatred of the foreigner was not dead and that China had still much to learn.

Mr. Costin's work covers the same period of time as the first volume of Mr. H. B. Morse's *International Relations of the Chinese Empire*, and the two can with advantage be read side by side. Differences of view will be found ; but they are not many, and both narratives make it amply clear that the

real *fons et origo mali* during those early years of intercourse was not, as even now tendentious propagandists occasionally assert, the opium question—regarding this the attention of the reader is drawn to the brief fragment of a draft dispatch of Lord Palmerston's on page 60—but the obstinate refusal of the Chinese, arrogant in the possession of a civilization of almost immemorial antiquity, to treat Western nations on a basis of equality.

The latter part of the introductory chapter of Mr. Costin's work contains an admirable but all too brief little essay describing the structure of Chinese Society and Government at the time when the British trader first appeared on the scene. Of great interest too is his account of the relations existing between the British community at Canton and their Superintendent of Trade. It shows that the Chinese authorities were by no means the only thorn in the side of that much harassed official.

This work comes from the Clarendon Press; in other words, it is excellently printed and edited.

H. PARLETT.

India

A DICTIONARY OF THE CLASSICAL NEWĀRĪ. By HANS JØRGENSEN. Det Kgl. Danske Videnskabernes Selskab Historisk-filologiske Meddelelser, XXIII, i. $9\frac{1}{2} \times 6$, pp. 178. København: Levin and Munksgaard, 1936. Kr. 9.50.

This work—a Newārī-English Dictionary—registers a distinct advance in our knowledge of the vocabulary of Newārī. As the author states, it is “a considerable enlargement and improvement” upon his “Versuch eines Wörterbuches der Nevarī Sprache”, which appeared in *Acta Orientalia*, VI (1927).

As "Classical Newārī" the language dealt with is that of the manuscripts. Traces of the more modern speech found therein have been taken into consideration only to a very limited extent, the main characteristics having to do with changes in, and disappearance of, final consonants.

The material itself is drawn from some seventeen manuscripts in the British Museum and Cambridge University Libraries. Eleven of these are dated and range from the fourteenth to the nineteenth centuries, A.D. The author has also used his edition of the *Vicitrakarnikāvadānoddhṛta*, published by this Society in 1931, and the relevant Hodgson papers in the India Office.

Loan words, wherever possible, are explained, but no reference of true Newārī words to their relatives in cognate languages is given, as the author rightly holds that in the present state of Tibeto-Burman comparative studies the number of reliable equations would be small. He has, however, given this some attention in *Acta Orientalia*, XIV (1936), pp. 281-2.

The present dictionary offers abundant materials towards the solution of the problems presented by the final consonants of Newārī verbs, which are often obscured by the amalgamation of a suffix with the root. Such final consonants are added, wherever known, throughout, e.g. *jyāya* (-t), to work, and point directly to the relatives of such words in Tibetan and allied languages. In the present case T. *byed-pa* at once comes to mind as a relative of *jyā-t*. A different, and interesting, type of case is *puya* (-l), to blow (of the wind). Here -l appears in what is in Tibetan a -d ~ -n ~ -o family : *abud-pa*, to blow, *spun-pa* (blown by wind) : chaff, husks, *pu*, a puff of breath (cf. Newārī *phu-phu dhāya* to pant, to gasp), and others, and we may be able eventually to gain some idea of the causes for the appearance of -l as a final in such families, at least in Newārī, as it is almost certainly not original. In still other instances we can assign Newārī words to definite final classes only by comparison with other languages. Representative

cases are *punē*, to be covered, and *puya*, to cover, where dentals are indicated by Kachin *pun*, to cover, *lă-put* (covered part) knee, Burmese *pūnō*, to cover, *punō* (cover oneself) to hide, etc. In a few cases it is possible that comparative methods will eliminate as loan words some so regarded by the author, as, for instance, *kun*, a corner, an angle. This may be a real Newārī word related to Kachin *kun*, to be bent, *mă-kun*, to crouch down, *tiñ-kun*, to bend, to be pliable, rather than a loan from Hindī *kon*.

For the pursuit of all such problems as these, as well as for the more practical ends of the translator, the author has given us an invaluable piece of work. He is to be congratulated upon having produced a dictionary which will prove indispensable in any future study of the language.

A. 696.

STUART N. WOLFENDEN.

ARMENIANS IN INDIA FROM THE EARLIEST TIMES TO THE PRESENT DAY. By MESROVB JACOB SETH. $8\frac{1}{2} \times 5$, pp. xv + 629. Calcutta: Published by the Author, 1937. Rs. 10 or 15s.

It is over forty years since the veteran author of this book published a History of the Armenians in India, and he has now expanded and enriched his previous work by incorporating in it the labour and enthusiasm of a lifetime. The thick volume now published is, indeed, less a history than a collection of materials for some more concise and critical historian of the future. It contains copious extracts from authorities, is written in a pleasing discursive style with many pardonable digressions, and bears throughout strong evidence of the author's untiring diligence in unearthing every kind of record bearing on his interesting subject. The migrations of his fellow countrymen to India from Armenia and Julfa and their varied experiences in their Indian surroundings contribute

a series of quiet romances which he has done well to record. He takes us from one city to another, beginning with the Agra of Akbar's era and ending with the Madras of to-day, and not the least attractive of the pictures he presents is that of his own Calcutta with its well-known families of Apcars, Stephens, Gregorys, Arathoons, Galstauns, and the rest. He gives us, one after another, sketches of the many prominent men in various walks of life who have emerged from the small but highly intelligent community to which he belongs, and one is only sorry that he feels obliged to end with a somewhat pessimistic outlook on the future of the community. As regards its past history, the author has done one admirable service in presenting translations of the numerous inscriptions on Armenian monuments in various cemeteries throughout India. There has always been some misgiving as to the accuracy of such translations as have hitherto been given, and it is well to have interpretations from such an authoritative source. If he is still able, as he proposes, to publish these hereafter in a separate "Armenian Obituary" he will do a good service to historical research.

There is no index to this large book, but the author disarms criticism on this score by pleading ill health, and his volume is after all of a type for which an index is not indispensable.

A. 902.

E. D. MACLAGAN.

STUDIEN ZUR TEXTGESCHICHTE DES RĀMĀYĀNA. Von
WALTER RUBEN. Bonner Orientalische Studien, Heft 19.
9½ × 6½, pp. xvii + 263. Stuttgart: W. Kohlhammer,
1936.

The University of Bonn has a fine record in the past for critical work on the *Rāmāyāna*, and the revival of the tradition in the present volume is welcome. Dr. Ruben has selected six passages, four from the *Kiskindhākānda* and one each from the *Bālakānda* and *Ayodhyākānda*, examined the textual evidence, both in manuscripts and printed editions, and worked out a

text for them showing the variations and common matter. Before discussing his conclusions, I may be allowed a preliminary complaint that he has had insufficient regard for his readers in presenting the material ; it requires much hard work to understand what he is doing, and as regards his texts I am still in the dark on many points. In these circumstances I have only been able to check his results by comparing his presentation of the North-Western recension for the first four passages with the text of the *Kiṣkindhākāṇḍa*, recently published in somewhat uncritical fashion in Lahore ; though resting on different MSS., the two agree in the main, and evidently the MS. material used by Dr. Ruben is adequate.

As for his general views, he divides each recension into two versions, those for the southern recension being based on Rāmānuja's commentary and the *Amṛtakatakāṭikā* ; this latter novelty does not appear absolutely necessary, but may be accepted. Incidentally his analysis of the various commentaries is perhaps the best part of the book. He further holds that these four versions all derive from a single archetype, a remodelling of the epic in roughly 12,000 verses which was carried out before the time of Kālidāsa, say, about A.D. 400 ; his evidence for this, for the reason given above, is not easy to follow, but I for one am satisfied on general grounds that he is on the right lines. For, as I have pointed out elsewhere, the *Rāmāyaṇa* in the form known to Aśvaghoṣa differed materially in certain points from that which can be seen to have been the common basis of the existing versions ; and the acceptance of a late date for an archetype, drawn up by a single hand, seems to meet all the difficulties. Behind this archetype he places an "Urtext", which was not necessarily the same as Vālmiki's original poem. On the composition and date of this Urtext he wisely refuses to commit himself, but believes he has discovered a portion of its opening in the *Bālakāṇḍa* of the North-Western recension ; again he may be right in this, as Jacobi's reconstruction of the first *sarga* omits many verses which were certainly known to Aśvaghoṣa.

Let me conclude by hoping that Dr. Ruben will continue his studies on the nature of the archetype and give us an extract of considerable length from it in a more perspicuous form, and that he will abandon the idea (p. 57) that a *kāvya* text is necessarily preserved in greater purity by the existence of commentaries; for *kāvya*, as distinct from other departments of Sanskrit literature, there is much to be said for the diametrically opposite view, since commentators often believed themselves capable of "improving" the poetry which they professed to be explaining.

A. 804.

E. H. JOHNSTON.

RGVEDASĀMHIṬĀ WITH THE COMMENTARY OF SĀYANĀCHĀRYA.

Edited by N. S. SONTAKKE and Others. Vols. I and II.
 $10\frac{3}{4} \times 7$, pp. 20 + 1115 + 2, 46 + 998 + 2. Poona :
 Tilak Mahārāshtra University, Vaidika Samshodhana
 Maṇḍala (*sic*), N.D. [1933 ?], 1936. Rs. 12 each.

Max Müller's great edition of Sāyana's commentary is now so difficult to procure in view of its rarity and the high price which it commands, that a sound new edition at a reasonable cost must be welcome to scholars. The volumes under review cover the first five *maṇḍalas*, and the work has proceeded far enough for a preliminary estimate of its value to be formed, though final judgment must be deferred till its completion. It is based on the collation of a considerable number of MSS., and, having compared a substantial portion of it word for word with the *editio princeps*, two points have impressed themselves on me, firstly, as might have been expected, that Max Müller's edition settled the text in all but a small number of trivial cases for all time, and secondly that this edition may be safely used by itself. On the one hand I failed to discover any new readings or differences of importance; on the other the text has been printed with unusual care, misprints being few in number and being nearly

all registered in the corrigenda. The only misleading one that I have noted as overlooked is at vol. i, p. 931, line 3, where "apādāna" should read "āpādana".

A. 113.

E. H. JOHNSTON.

INFLUENCE OF ISLAM ON INDIAN CULTURE. By TARA CHAND.

$8\frac{3}{4} \times 5\frac{3}{4}$, pp. vi + 327, pls. Ixi. Allahabad : The Indian Press, Ltd., 1936.

This pleasant and well written work provides us with an interesting review of ideas held by a long list of Hindu thinkers as to the nature of God, and of man's relation to God, and other kindred subjects. Some account of Sūfiism and other forms of Islamic mysticism is given, and we are shown how Sūfiistic teaching impressed itself on the systems of Hindu reformers and saints. Certainly the description of Hindu religious ideas is adequate and may be thoroughly commended. There are also sixty-one plates at the end of the book, which add to its attractiveness.

But the business of a reviewer is to criticize ; and two criticisms must occur at once to any reader. It is, indeed, obvious that Islām must have had a great influence on Indian culture. How could it be otherwise, considering that most of India has been under Muslim rulers for centuries, and that even to-day there are more Muslims in India than in any other country in the world ? There is hardly any need to elaborate the point, and it is a question whether Mr. Tara Chand's book offers us any fresh ideas.

Secondly, this book, save for the last two chapters on architecture and painting, is concerned solely with theological speculation. Is culture merely this ? What about music and sculpture, history, literature, language, drama, science, social life and customs ? Does theological speculation on matters which are beyond actual experience and knowledge really sum up almost the whole of culture ? What is culture ? The *Oxford Dictionary* says it is intellectual development.

Perhaps, however, Mr. Tara Chand's treatment is right. He understands the dominant feature of Indian culture. The Hindu mind naturally turns to contemplative and speculative philosophy. It tends to ignore the development of practical activities. One would suppose that the immigration and invasion of vigorous Muslim stocks would have done something to modify this attitude of mind. Does Mr. Tara Chand fail to find any evidence that it did ?

The chapter on painting does not show how Hindu art was affected by the Muslims, but how Persian painting was modified by Hindu artists.

Art, Archæology, Anthropology

BUDDHIST ART IN INDIA, CEYLON, AND JAVA. By J. PH. VOGEL. Translated from the Dutch by A. J. BARNOUW. $7\frac{1}{2} \times 4\frac{3}{4}$, pp. xii + 115, pls. 39, map 1. Oxford : Clarendon Press, 1936. 7s. 6d.

This little "handbook", as the author calls it, comprises an English translation of *De Buddhistische Kunst van Voor-Indië*, which was published in 1932, with the addition of chapters on Ceylon and Java. After a short, appropriate introduction, seven chapters are devoted to India, treating of the monuments of Asoka and the "National School of Sculpture of Central India", Gandhāra, Mathurā, Amarāvatī, the "Golden Age" of the Guptas, the cave temples, and the aftermath and decline. There follow a chapter on Ceylon, and one on Java, where Buddhist art perhaps attained its highest standard in the great Barabudur. Each chapter is illustrated by well-chosen, representative sculptures, which have been excellently reproduced in the plates. The work, covering so wide a field in so short a space, has been skilfully arranged on historical and regional lines, due regard being paid to the relative importance of the phases of art described. It presents the main outlines of the subject, and, having been

written by one of the foremost living authorities, provides a reliable foundation for more detailed study, to facilitate which the principal works of reference have been cited in the Bibliography.

While drawing attention to the salient features which characterize each period and region, Dr. Vogel wisely avoids "the quicksands of æsthetic disquisition, which is too often biased by personal prejudice" (p. vii). In a concise survey of this nature he has also had to avoid discussion of many debatable points. Regarding the origin of the practice of making images of the Buddha—so definitely avoided in the early art of Sāñchī and Bharhut, where symbols alone appear—he writes, "the Buddha image may have originated in Gandhāra but the sculptors of Mathurā, while copying it, transformed it into something quite different." He would attribute the first impetus to the rise of Buddhist art to the commandments stated, in the Pāli *Parinibbānasutta*, to have been given to Ānanda by the Buddha shortly before he passed away, to the effect that the four sites associated with the chief events of his life should be visited "with feelings of reverence", and that a *stūpa* should be erected over his remains. He does not deal with the more elaborated suggestions of M. Foucher as to the part played in the development of Buddhist art by the preparation of mementoes or *ex-voto* objects for the use of pilgrims to the sacred places.

Biblical Archæology

EXÉGÈSE TARGUMIQUE DES PROPHÉTIES MESSIANIQUES. By JEAN JOSEPH BRIERRE-NARBONNE. 13 × 10, pp. 109. Paris : Paul Geuthner, 1935. Frs. 50.

By the publication of this volume M. Brierre-Narbonne has almost completed his survey of the Jewish interpretations of the Messianic prophecies. He here gathers together most of those which are contained in the Targums, following his

usual method of exhibiting the Aramaic texts, with translation into French, short explanatory notes, and a selection of parallel passages in Apocryphal, Rabbinic, and New Testament literature. A short introduction gives an account of the various Targums and an indication of their Messianic contents (see, however, p. 36, where he explains that he has not included those passages, of which a list is given, open to doubt). The bibliography is incomplete; critical editions of Targumic texts from Yemenite MSS. are not listed; translations by English scholars of particular books are apparently unknown; and with the exception of Dr. Robert Young's tractate there is no mention of any of the English monographs on the particular subject dealt with by our compiler. The indices (pp. 94–106) are complete, and will be useful as a guide to further study. The whole work is reproduced from M. Brierre-Narbonne's manuscript by the Dorel process, and is pleasant to read owing to his fine calligraphy.

A. W. GREENUP.

Cuneiform

LA LÉGENDE PHÉNICIENNE DE DANEL. Par CHARLES VIROLLEAUD. Haut-Commissariat de la République Française en Syrie et au Liban, Service des Antiquités : Bibliothèque Archéologique et Historique, Tome XXI. Mission de Ras-Shamra, Tome I. 11 × 9, pp. viii + 241, pls. 17. Paris : Geuthner, 1936. Frs. 150.

In this volume M. Viroolleaud edits one of the most important of the cuneiform texts recently discovered at Ras Shamra. The text, which is poetic in character, is concerned with the adventures of a certain Aqhat, son of an ancient hero named Danel. Because Aqhat is about to become prince of the earth and therefore to receive first fruits as tribute, the goddess Anat is roused to jealousy against him. She thinks that she has been cheated out of what should be the privilege of her own offspring, of whom as yet she has none. Therefore

she threatens Aqhat with hurt, but he assuages her by promise of lavish offerings. Nevertheless, her henchman Yaṭpan is not so easily appeased, and he encompasses the death of Aqhat. Thereupon Danel repairs to the high god El, who promises him that in the end Aqhat will yet triumph. The text closes with a fragmentary description of a festival in which offerings are indeed brought to him, and in which even Yaṭpan is compelled to pay tribute to him. It is thus evident that Aqhat was believed to be restored to life.

The text, as edited by M. Virolleaud, does not allow for so ready a comprehension of the story, since it is to be feared that he has arranged the tablets in the wrong order, placing Tablet I after Tablet II. Moreover, he does not appear to have seen that, though clothed in quasi-historical garb, this text is really the *mythos* of an autumn pantomime representing the assault of autumnal rains upon summer crops. Yaṭpan is simply the genius of those smaller rains which precede the autumn downpour, his name connecting with Arabic *w-t-f*, Hebrew *n-t-f*, etc., "drip, distil". He may thus be said to "pierce to the root" the fruits of summer. The other minor characters are likewise projected from mythology, and, in theme, this text is parallel to the Lay of Aleyan-Baal and Mot, already published in this journal.

Failure to recognize this vitiates much of M. Virolleaud's general interpretation, but it does not diminish our debt to him for his acute elucidation of the document on purely philological lines. Here he has been peculiarly happy, and although in several places it would be possible to introduce improvements, there can be no doubt that in the main, he has laid sure foundations for future work.

A few particular points : *bl tl bl rd* in I D. 44 surely means "no dew there was nor rain", *rd* being the Arabic *ذِذَر*. *my hspt* (ib., 51, etc.) surely means "the waters of the early showers", *hspt* being a metathesis of *s-h-p* (Prov. xxviii, 3) and *s-p-h* (Job xiv, 19). What is meant is the Arabic *sahab*. In I D. 62 *palt* (|| *aklt*, i.e. "consumed land") surely connects

with Ar. حَلْ “dried soil”, etc., whilst *bṣql* (denoting a herb) is a crossing of *bql* “greenstuff, vegetable”, with *bṣl* “onion”. In the scene describing augury (I D. 110, etc.) *smt* is the Assyrian *šimātē* “marks, signs”, whilst *‘sm* connects with Arabic وَعْظَةٌ “monition”, i.e. “portent, omen”. In the scene describing the fate invoked by Danel on Yaṭpan (I D. 156) *tÿll bnr* means “bind upon him a yoke”, for cf. Arabic غَلْ and Hebrew גַּל, and Hebrew נִיר, Assyr. *niru*. In I D. 167 *B'l lht* denotes a plague, the latter word standing for *lhdt* after Arabic لَهُدٌ “afflict”; cf. Prov. xviii, 9, בָּעֵל מְשֻׁחָת.

There are several other suggestions which might be made. Readers who are interested in the subject may perhaps be referred to the reviewer's edition of the text in *Studi e Materiali di Storia delle Religioni*, Jan. and Oct., 1937.

M. Viroilleaud prefaces his edition with an account of what can be learned about the history of Ugarit (Ras Shamra) from the tablets found there. In this he discusses several texts previously published. Unfortunately, he eschews an account of social life and custom.

At the end of the volume there is a Glossary-Concordance, as well as excellent facsimile reproductions of the tablets and photographs.

If it must be candidly stated that this edition falls somewhat short of the standard previously set by M. Viroilleaud, students none the less owe a deep debt of gratitude to him for the masterly way in which he has solved the major riddles of a difficult text. The defects are, indeed, those which might readily be expected in a pioneer work.

One final point: the title is a misnomer, for one of the tablets itself bears the superscription “Myth of Aqhat”. Danel is doubtless the wise man mentioned in Ezekiel xiv, 14, but there is no reason to alter the title, as known to the men of Ugarit, in order to stress a single Biblical parallel.

VORSARGONISCHE UND SARGONISCHE WIRTSCHAFTSTEXTE.

By A. POHL, S.J. Hilprecht Collection of Babylonian Antiquities. Vol. V. $12\frac{3}{4} \times 9\frac{1}{2}$, pp. 29, pls. 44. Leipzig : J. C. Hinrichs, 1935. M. 15.

Here are 216 pieces. The majority are pre-Sargonic ; the oldest are not very old (late Fara onwards) and the youngest are Akkadian. They are briefly introduced by Father Pohl who has copied the tablets and compiled the usual lists of names with competence. The matter of the tablets is undistinguished, but important for the story of Nippur, though there is little that is properly historical. There are school-tablets, lists of workers and their allowances, lists of cereals and products, notices of a few sales and purchases.

The "Hauskauf" tablets (Nos. 71, 75, 78) are very like those found at Fara in script and in form. On these of Nippur, as on those of Fara, occurs the formula *bal* plus proper name, Thureau-Dangin regards this as a date formula, but P. Deimel contradicts, making the phrase mean "zerbrochen (ist die Schuldtafel) von NN". (Fara, i, p. 1.) To the seven examples of this formula known hitherto the Nippur texts add one new one (*bal Ur-sukkal-nun-zid-še-an-gid*) and repeat two already known. It is odd that the same names occur in the formulæ on tablets of different provenance : Telloh, Fara, and Nippur. P. Deimel's theory is by no means proved.

Of the script : no very early specimens here. Clue signs to relative chronological order are the signs *šu* and *da* with the vertical wedge made head downwards (earlier), and upright (later), and the sign *a* with both strokes unbroken (earlier), and the right stroke broken (later). An examination of the copies shows that in the same *copy* there appear the earlier *šu* and, in the compound *K.A.ŠU*, the later *šu* (Nos. 17, 35, 46) ; and the earlier and later forms of the sign *a* (Nos. 25, 34, 46, 102, 138, 150, 181), even in the writing of the same name (No. 114) ; and the simple *a* in later form, but the earlier *a* in the compound *K.A.A* (i.e. *nag*) on the same tablet (No. 122).

There are Nippur variants of formulæ used elsewhere, e.g. *še-/*, *gan-/*, *šu-nigin-/*, *gu-an-šù-/ PI* (for the regular *bi*). At Ur, *gu-an-šù* is usual, *šu-nigin* never occurs; at Fara both occur but *gu-an-šù* more frequently; at Nippur both are used, and twice (Nos. 39, 67) both occur on the same text.

The large number of personal names are mostly Sumerian. Few have a divine element; of these *Ur-^aN* is by far the commonest style. There is only one *lú-^aN* name and only four *hugal-^aN*. It might be better to read Lu-la-la for Udu-la-la; *Í-lí-a-hí* for Ni-ni-a-dùg; *La-gi-pù* (m) for La-gi-šub; *Ib-lul-il* for Ib-nar-il; *Í-lí-be,-lí* for Ni-ni-pi-ni.

The names of deities are got chiefly from personal names. As might be expected at Nippur, Enlil is the most popular in personal names. But his consort Ninlil occurs only in two names. Dumuzi is here and the form Enkidu but not Gilgameš. The moon god is written "Sin", never "Nannar". And Ninurta and Nintiugga which are said to appear first in Ur III, make a much earlier appearance on these tablets. The information concerning the cult of the gods is meagre. Each of Nos. 155-9 is described as "Opferliste". This is doubtful.

Names of places are fairly numerous. But surely *In-maš-ga-ni-ki* is an error; *in* being prepositional. The phrase recalls the various forms of *in Maš-gan-ki* on Meek's Nuzi tablets of the Akkadian age.

T. FISH.

TABLETTES CAPPADOCIENNES. Par J. LEWY. Troisième
Série, Première Partie. (Musée du Louvre. Textes Cunéiformes. Tome XIX.) $12\frac{1}{2} \times 8\frac{1}{2}$, pp. 3, pls. lxxx. Paris :
Paul Geuthner, 1935.

This volume contains exclusively business documents of the "letter" class. The tablets are for the greater part well preserved, and the eighty-one documents here published serve to confirm, correct, and sometimes add to our knowledge. There is, perhaps, in all the extensive field of cuneiform

business documents no single class more difficult to understand than the "Cappadocian" business "letter". This is partly because the matter is allusive, referring to unknown relationships and conditions of a private nature, partly because the writing represents a living dialect (too often called "Old Assyrian") of the Eastern Semitic group, adapted to the needs of a group without ethnic, religious, or political unity, following grammatical rules and exhibiting peculiarities not yet clearly understood, but principally because the social structure of this society was much more complicated and more moulded by the conditions of international trade than any yet known to us in early times.

The very first text in this book serves to illustrate these points. It is apparently addressed to three persons, Puzur-Ašir, Amua, and Ašir-Samši; yet throughout the document these three are addressed in the second pers. sing.; even if *amua* is to be taken as *emua*, a view favoured by the presence of a single wedge before it not used with the other names, there is still some reason for treating two persons as one which escapes us, and yet is important for the understanding of the position. The dialectic use of *ula* to present an alternative, a grammatical use peculiar to these texts, occurs in the string of imperatives, 11. 28-9, *tib'ama atalkam ula kaspam šukunam*, "rise, come or, if not, deposit cash." The use of a word in a dialect sense appears in 1. 12 ff., *ina ellat(at) ellat(at) dubbuni ilukunimakum matima tirtaga ula ilikam*, "though our tablets have come to you by one caravan after another, your instructions have still not come to me"; elsewhere *ellatu* means "military forces, succour". Finally, the understanding of the letter depends on a usage with regard to credit which has never yet, to my knowledge, been pointed out in the many discussions by legal authorities; a sharp difference was drawn between "men", that is men of honour, and men without honour, "not men." In the instance of this text, men had been trading in two different towns on a mutual account, without cash deposit (1. 8),

and without deducting a percentage from transactions for security (11. 9-10), on the understanding that if there was a deficiency in the balance of goods in stock (11. 20-1, *šuma ata babtiga zahrati* = *šumma atta babtika sehrat*, "if your stock goods [lit. things in the gate] are short," viz. of the amount owing) to cover payments due, a deposit of cash should be made (1. 22). Zilalabum (*Silli-abi*) and Elani, closely associated with him, complain that owing to the breach of such an arrangement they are themselves reduced to "not men", *ata ana la awelim ina eliga šaknuni*, "Why are we made into 'not men' on your account?" (11. 26-7). They threaten legal action to discredit Puzur-Ašir in the foreign settlement (1. 33, *i garim nibašga*) so that he can no longer be treated as an equal (1. 34, *u ata ana la ahini taduar*). It is probable that certain sections of Hammurabi's Code are to be understood with reference to this social distinction. Above all, the much discussed *šalmu-kenu* clause in the Old Babylonian documents, which cannot possibly refer to "Solidar haftung" as it appears where there is no plurality of debtors (the complicated explanation most recently given implies that the ancients did not understand the expressions they used themselves), must refer to this same distinction. The words *šalmu* and *kenu*, "whole" and "regular", can quite well refer to the social standing of an individual as a "man", *awelu*, and the attempt to restrict the meaning to a sense implying a different reference is merely pontifical.

Much more of great interest will result from a close study of this volume. We may be allowed here to express the hope that Dr. Lewy, whose work has suffered owing to causes from which scholarship ought to be immune, may yet find means in America to pursue his work on this class of documents.

Islam

THE HISTORY OF IBN AL-FURĀT. Vol. IX, Part I. Edited by COSTI K. ZURAYK. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 243, pl. i. Beirut: American Press, 1936.

This history is in ungrammatical and unclassical Arabic, but these faults are easily forgiven to an author who compels his reader to follow him to the last page. It is part of a vast chronicle beginning with Adam and continuing to the writer's time ; but this volume of 243 pages deals with four years of the final period, from A.H. 789 to A.H. 792 (A.D. 1387 to 1390), and records extraordinary peripeteias of Mamluke Egypt, the dethronement of the Sultan Barquq by a viceroy who very soon had to flee before another rebel, and helped Barquq, who displayed both personal courage and sagacity, to recover his throne. Although Ibn al-Furāt frequently quotes contemporary writers for his material, he is here describing events which he himself witnessed, and in which he took some part ; and indeed his accounts reflect the anxiety of one who is waiting for a dénouement whose nature he cannot foretell. The narrative is rendered all the more impressive by its proceeding according to the system adopted. Appointments made by the ephemeral rulers are scrupulously enumerated ; at the end of a year the story is interrupted by obituary notices of important persons.

The editor has noticed differences between Ibn al-Furāt's statements and those of other historians of Egypt, and explained difficult expressions ; his work is throughout pains-taking and scholarly. His brief Introduction is to be enlarged in a monograph on Ibn al-Furāt and his sources ; and in addition to a Part II, which is to complete this volume, he contemplates editing as much as is known to be in existence of the earlier volumes. One could scarcely expect those which cover the periods of Tabari and Ibn al-Athir to add much to our knowledge.

ASH'ĀR AWLĀD AL-KHULAFĀ' WA AKHBĀRUHUM. From the Kitāb al-Awraq. By Aṣ-Ṣūlī. Edited by J. HEYWORTH-DUNNE. 9½ × 6¼, pp. 11 + 361. London: Luzac and Co., 1936.

Sections of the *Kitāb al-Awraq* continue to appear and there is no need to repeat what has been said in notices of the earlier parts. As there is a gap in the photograph in the Cairo library, corresponding to p. 320 of the printed text, a few pages have been extracted from the *Kitāb al-Aghāni* to give some continuity to the story. The interest in this part, as in the first, is mainly literary, but Aṣ-Ṣūlī was not bound slavishly by his title and included poems about the royal family as well as by them. The longest section is given to Ibn al-Mu'tazz and contains much that is not in the *dīwān*. The extracts from his letters, which vary from a page to half a line, are chosen for reasons of style only. The poems about wine make good reading, even though they are not very original. Al-Nazzām anticipated him in the conceit that wine is the spirit and the jar the body. In this connection "cobwebbed jars" is quite orthodox. The Mesopotamian poet welcomed autumn as eagerly as the Elizabethans welcomed the spring. His love poems are monotonous. 'Aliya, the sister of Hārūn al-Rashīd, had a reputation for piety, "she was either praying or singing," yet she seems to have been flighty, and we are not surprised that her brother objected to her writing poems to servants of the palace. One anecdote is told against her. Startled by a noise, a man said, "Till now I have never believed that the Greek organ murders music." Al-Ma'mūn told him, "That is your aunt 'Aliya teaching your uncle Ibrāhīm a song."

ARABIC INSCRIPTIONS IN THE COLLECTION OF THE HISPANIC SOCIETY OF AMERICA. By WERNER CASKEL; translation from the German by BEATRICE GILMAN PROSKE. 12 × 9, pp. xiii + 44, ills. 60. New York: Hispanic Society of America, 1936.

Though the Arabs were settled in Spain and parts of Portugal for over 700 years, for a long time as supreme power, and left in the shape of buildings some of the choicest monuments of architecture, the quantity of inscriptions preserved is comparatively small considering the long period. With great erudition Mr. Provençal published in 1931, in two volumes, a description of all inscriptions, whether on buildings or tombstones, found scattered over the whole of Spain. It is by a happy chance that a further number of such inscriptions, principally on tombstones, got into the possession of the Hispanic Society of America and the detailed description with very good photographs of the most conspicuous specimens is the subject of this small, but sumptuously printed, volume.

As most of the stones came from the collection of Spanish gentlemen living in Almeria, an important port on the south-east of Spain during the Middle Ages, it is not surprising that most of the inscriptions came from that town. They exceed in number even those recorded by Mr. Provençal and date from 312/927 to 528/1138, with one exception of a later date. The tombstones are of two types, slabs of about a yard in height with half its width of comparatively thin marble, and prismatic stones which lay on the top of the graves varying in length. The execution is in all cases beautiful and the writing is the monumental Kufic which we find for the early centuries of the Hijra from Syria to Spain. In judging the script on monuments we have always to bear in mind that the more cursive script was more difficult for the mason to execute, though it is fair to assume that the text of the inscription was probably drawn upon the slab by some educated person, and that the mason's work was solely to execute the inscription with

as much skill as possible. We find phrases like حمدی الاول ; the editor believes that they may be due to the ignorance of a Christian sculptor. I cannot agree to this ; for similar errors occur in manuscripts written about the same time in Persia by undoubted Muslims. While most of the tombs belong to unknown persons, two stones, Nos. XVIII and XIX, give the graves of two ladies of high rank. Though they themselves are unknown to history, the author has established their identity and gives a short but clear account of the importance of their family. Did both of them die young and unmarried ?

The two stones described under Nos. 52 and 53 belong no doubt to another part of Spain as the material is different, and, on account of the much later date, in entirely different script.

A. 709.

F. KRENKOW.

MUGHULTAI'S BIOGRAPHICAL DICTIONARY OF THE MARTYRS
OF LOVE. Edited from the two extant manuscripts in
Istanbul. Bonner Orientalistische Studien, Heft 18.
By OTTO SPIES. Vol. I. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. ii + 224. Stuttgart :
W. Kohlhammer, 1936. RM. 10.

A short account of this encyclopaedia of lovers was given by Professor Otto Spies in his contribution to the P. Kahle *Festschrift* (Leiden, 1935, pp. 145–155). The importance of the compilation is stressed by Dr. H. Ritter in his *Philologika VII* (*Der Islam*, 1933, pp. 88–9), who calls attention in particular to the many quotations from rare works which occur in the book. Mughlatai, who is otherwise known as a traditionist, died in the year 762/1361. The present work was written during 740–1/1339–1340 ; and as one of the two manuscripts on which Professor Spies bases his edition was written as early as 742/1341, it will be appreciated that the text

rests on an unusually secure foundation. Since the editor intends in a second volume to deal with all textual and literary problems arising out of the book, as well as providing full indices, it is not necessary at present to give more than the unqualified welcome which such a valuable contribution to a fascinating branch of knowledge deserves. The book is well and on the whole accurately printed, although we agree with the editor that it is a misfortune that the Indian press which issued it did not possess sufficient fount to print the verses with vowel-marks. An erratum slip corrects all the serious errors.

A. 803.

A. J. ARBERRY.

Miscellaneous

THE HEBREW-ARABIC DICTIONARY OF THE BIBLE KNOWN AS KITĀB JĀMI' AL-ALFĀZ (AGRŌN) OF DAVID BEN ABRAHAM AL-FĀSĪ (TENTH CENTURY). Edited by SOLOMON L. KROSS, Vol. I. Yale University Series, Researches, Vol. XX. 10 × 7 $\frac{1}{2}$, pp. cli + 600. New Haven: Yale University Press, 1936. 35s.

Editors of *Anecdota* are at times harassed by the thought that the works which they bring to light had best have remained "unpublished"; Professor Kross is fortunate in being free from such anxiety, since according to him "the importance of this Dictionary, as one of the earliest sources for Hebrew and comparative Semitic philology, can hardly be overestimated". He has certainly bestowed on it as much care as even according to his estimate it can deserve, and the results of his researches, communicated in the Introduction, are of great interest. The author was a Karaite, originally of Fez, but settled, it would appear, in Jerusalem, and acquainted with the geography of Palestine. Like the Israelite with whom the author of *Al-Mathal al-Sa'ir* conversed (Cairo, 1282, p. 113), he seems to have regarded Arabic as a sort of modification of Hebrew, whence he uses **עלִי מסמועה** "according to

its sound " of Hebrew words with the sense " according to its meaning in Arabic ". The editor has with much research enucleated the relations of this dictionary to previous and subsequent works. Hebrew grammar, if not quite in its infancy, had made little progress when it was compiled. The observations in the Introduction on the use of grammatical terms, and in general on the author's language, are instructive.

The employment of the Hebrew character, which would appear to be that of all the MSS., is obviously right ; and the printing is in every way admirable. My use of the Arabic character in the edition of Jepheth's Daniel was, I think, justified by the fact that the oldest MSS., of which there are fragments in the British Museum, were in that character, and those in the Hebrew script showed clear signs of transliteration from the other. Hebrew written in it looks so strange that this Karaite must have had some adequate ground for adopting it in the case of biblical quotations. Did he think that the addition of vowel-signs to the original text violated the rule of Deut. iv, 2, just as we may suspect that the vocalization of the Qur'ān had something to do with the fall of the Umayyad dynasty ?

Since this volume only deals with eight letters out of twenty-two it would be premature to base upon it any opinion as to the extent to which the work justifies the editor's view of its importance. It cannot well have the merit which gives old dictionaries like those of Hesychius and Suidas their value, i.e. their preserving fragments of ancient lore which would otherwise have been lost. And the specimens of exegesis which strike the eye as one glances through its pages seem curious rather than scholarly. That the editor has done his work well will, however, be agreed, whatever judgment may be passed on the author.

D. S. MARGOLIOUTH.

YRJÖ WICHMANN'S WÖRTERBUCH DES UNGARISCHEN MOLDAUER NORDCSÁNGÓ- UND DES HÉTFALUER CsÁNGÓDIALEKTES NEBST GRAMMATIKALISCHEN AUFZEICHNUNGEN UND TEXTEN AUS DEM NORDCSÁNGÓDIALEKT herausgegeben von B. CSÚRY und A. KANNISTO. 10 $\frac{1}{4}$ × 7 $\frac{1}{2}$, pp. xv + 219, pl. 1. Helsinki: *Lexica Societatis Fennō-Ugricæ* IV. 1936. 160 Finnish marks.

Like the rest of the series to which it belongs, this work is excellently produced. It well exemplifies that close collaboration of Finnish and Hungarian scholars which has always been such a happy feature of Finno-Ugrian philology.

In 1906-7 the great Finnish Finno-Ugrist Professor Yrjö Wichmann (b. 1868, d. 1932) made a journey to the areas in question with the object of carrying out linguistic field-work—a type of research which, by reason of his earlier expeditions to the Udmurt-Votyaks (1891-2 and 1894), the Komi-Syrjänes (1901-2), and the Mari-Cheremiss (1905-6), he was peculiarly fitted for. His material is here presented under the editorship of a Finn, Professor A. Kannisto, and a Hungarian, Professor B. Csúry.

The dialects dealt with in this work are Csángó dialects. According to Z. Gombocz and J. Melich, *Magyar etymologiai szótár* s.v. 1. *csángó*, the word *csángó* (of doubtful etymology) is used by the Székelys to designate the Hungarians of Moldavia and also those of certain parts of Transylvania; the Hungarians of Moldavia call themselves—and also their compatriots in the Bukowina—by this name. Of the situation of the Moldavian Csángós Kannisto and Csúry say (p. vii): “Die Moldau-Csángós sitzen hauptsächlich in zwei Kreisen: in dem nördlichen Roman und in dem südlichen Bacău. Einige Csángó-Dörfer gibt es ausserdem noch in den Kreisen Neamț und Tecuci.” Wichmann's North Csángó material was collected in Săbăoani = Szabófalva (“komitat” of Roman), the largest Csángó village of Moldavia (c. 3,500), over a period of nearly five months. He then proceeded to Satulung = Hosszúfalu

= Langendorf (near Brașov = Brassó = Kronstadt) where, for about two months, he studied the "Hétfalu" Csángó dialect which, despite its name, does not stand in any particularly close relationship to that of the Moldavian Csángós.

It is the results of these two studies which are presented in this work. After an introduction (pp. vii-xv) there follows first (pp. 1-173) the dictionary of the two dialects, arranged in one alphabet. The flexional type is indicated, the corresponding standard Hungarian form given, and the meaning explained in German; the numerous Roumanian loan-words are pointed out. There follow next (pp. 177-198) the paradigms of the Szabófalva dialect—a most useful feature which should figure more often than it does in the dialect dictionaries of "difficult" languages—and, finally (pp. 201-219), texts from Szabófalva in phonetic transcription and with German translation.

This is the first account of the Hétfalu Csángó dialect and by far the most detailed and clear account of that of the Moldavian Csángós. The present exhaustive work will be welcomed by all Finno-Ugrists as a most important contribution to Hungarian philology.

Detailed criticism cannot be attempted by one without personal knowledge of the dialects, and I will, therefore, only call attention to two secondary points: (1) it is unfortunate that modern Finno-Ugrian philology—exemplified here—tends so much towards "narrow" phonetics and away from phonematology that works containing standard Finno-Ugrian forms can virtually only be printed at one or two presses (cf. *BSOS.*, viii, 234-5); (2) the finding of words would have been facilitated if the standard Hungarian forms had been made to stand out (e.g. by the employment of clarendon).

ALAN S. C. ROSS.

BIBLIOGRAPHY OF JEWISH BIBLIOGRAPHIES. By SHLOMO SHUNAMI. 10 x 7, pp. iv + 399 + ix. Jerusalem: University Press, London: W. and G. Foyle, 1936. 30s.

This excellent publication provides a classified list of bibliographies covering all aspects of Judaica. In twenty-six chapters the compiler registers catalogues of public and private libraries, lists of Jewish periodicals, indexes to works dealing with Bible, Talmud, Qabalah, Hebrew language, Liturgies, Music, Yiddish, Ladino, Zionism, Sects, Typography, Manuscripts, etc. There are no less than 2,035 entries, and at the end there is a complete index of authors' names and subjects.

A general and superficial test does not reveal any omissions, and readers will be glad to have such detailed information as is here afforded concerning the printed catalogues of lesser-known libraries and collections.

Sometimes the compiler finds it difficult to draw the line between general catalogues and specific bibliographies touching one or other very particular inquiry. Thus it seems scarcely necessary to enter in this list Joachim Jeremias' list of descriptions of the Samaritan Passover, contained in his work *Die Passahfeier der Samaritaner*, for on this basis one could go on reproducing the bibliography quoted by any scholar in any work on any subject. It is also not quite clear on what basis the author has made his selection of booksellers' catalogues. These are, of course, valuable, but one wonders, for instance, why Messrs. Maggs' sumptuous catalogue of Hebraica is not included. Again, on what principle is Hirschfeld's *History of Jewish Lexicographers* and Margolis' work on Jewish Translations of the Bible excluded?

These, however, are really unimportant points, and it would be ungrateful to cavil. Especially welcome is the long list of bibliographies of distinguished Jewish scholars.

Librarians and scholars will find this work extremely useful, and Mr. Shunami is to be both thanked and congratulated on the excellent manner in which he has accomplished it.

The thanks of the Society are also due for the following volumes :—

SAUNDARYA-LAHIRĪ (The Ocean of Beauty). Ed. by Pt. S. S. SĀSTRI and T. R. S. AYYĀNGAR. Theosophical Publishing House : Adyar : Madras, 1937.

GENESIS VEERTIEN. By J. H. KROEZE. Hilversum : J. Schipper, Jr., 1937.

THE HOLY SCRIPTURES : DEUTERONOMY. By JOSEPH REIDER. Philadelphia : The Jewish Publication Society of America, 1937.

SELF-EXPRESSION AND THE INDIAN SOCIAL PROBLEM. By SATYA DASS. Lahore : Sharma Niwas, 1937.

KITĀB AL-TAWAHHUM. By HĀRITH IBN ASAD AL-MUHĀSIBĪ. Ed. by A. J. ARBERRY. Cairo : Association of Authorship, Translation and Publication Press, 1937.

CHINA BODY AND SOUL. Ed. by E. R. HUGHES. Contributions by L. BINYON, R. FRY, E. R. HUGHES, I. JACKSON, H. J. LASKI, B. MATHEWS, G. MURRAY, RUSSELL PASHA, E. POWER, A. SALTER and A. WALEY. $7\frac{1}{4} \times 4\frac{3}{4}$, pp. 166. London : Secker and Warburg, 1938.

NOTES OF THE QUARTER

Presentation of the Triennial Gold Medal

The ceremony of the Anniversary General Meeting was preceded by the presentation of the Society's Triennial Gold Medal to Professor R. A. Nicholson for his outstanding services to Islamic Literature. After an introduction by Professor Margoliouth, the Director, in the absence of the President owing to illness, the presentation was made by Sir E. Denison Ross on behalf of the Society.

ANNIVERSARY GENERAL MEETING

12th May, 1938

Professor D. S. Margoliouth, Director, in the chair.

The proceedings began with the reading and confirmation of the Minutes of the last Anniversary General Meeting on 20th May, 1937.

We regret to announce the death of the following Honorary Members and others since the last Anniversary Meeting :—

Professor A. V. Williams Jackson	Hon. Desmond Parsons
Professor Hermann Jacobi	H.H. The Maharaja of Patiala
Mrs. M. Griffith	Professor L. de la Vallée Poussin
Dr. K. P. Jayaswal	Dr. J. N. Reuter
Sir Reginald Johnston	Prince Svasti Sobhana
Professor S. H. Langdon	Rev. P. C. Jinavaravansa
Dr. A. Mingana	"Lieut.-Col." H. V. Rohu (S.A.)

The following Members have resigned :—

Sir T. M. Ainscough	Mr. C. Haller
Mr. C. Bamber	Rai Bahadur P. N. Mullick
Mr. M. V. Bhide	Mr. P. S. O'Brien-Butler
Mrs. Halley Brown	Rev. W. S. Urquhart
Mr. N. Deerr	Mr. P. W. Whittlesey

The following have taken up their election :—

As Resident Members

Mr. E. S. Bates	Professor V. Minorsky
Mr. L. M. Chefdeville	Mr. C. H. Reid
Mrs. Winifred Holmes	Miss Marie Seton

The following has taken up his election as Resident Member Compounding for Subscription :—

Colonel D. M. F. Hoysted

As Non-Resident Members

Mr. A. N. Bansiramani	Khan Sahib Ch. Bashir Ahmad Khan
Rev. R. Bell	Captain H. Lloyd-Morris
Dr. S. Birnbaum	Sir T. Stewart Macpherson
Mr. J. F. Blakiston	Mr. R. B. Lal Mathur
Mr. J. H. Breasted, jnr.	Mr. Niranjan Nath
Rev. A. Cameron	Mr. L. Parmanand
Mrs. E. M. Clark	Mr. Gopu Ramchandra Rao
Dr. Austin Craig	Kunwar Gordhan Singh
Mr. H. I. Husain Hilmi Didi	Rathore
Miss Margaret Drower	Sardar Sahib Balbhadra Singh
Rev. A. J. Fonseca	Mr. N. D. Waknis
Mr. Y. A. Godbole	Professor J. Dennis Ward
Mr. M. Md. Hamid	Miss E. M. Watts
Mr. M. Abdul Haq	Madame Negib Wissa
Mr. S. E. Ingemann	
H.H. The Maharaja of Jhala-war	

As Library Associates

Miss E. Ramsden	Mrs. E. S. Keen
-----------------	-----------------

As Student Associate

Mr. J. A. C. Pearce.

The President and Council have elected the undermentioned Orientalists to take the places of Professors Adolf Erman, A. V. Williams Jackson, and Hermann Jacobi as Hon. Members of the Society :—

Professor René Dussaud
Professor Arthur Christensen
Mahamahopadhyaya Ganganath Jha

Ill health has unhappily rendered it impossible for our President, Lord Hailey, to carry out his duties since last summer. They have, therefore, been discharged by the Director for most of the year. The Society is indeed grateful to Professor Margoliouth for his generous help, as he had only just completed his turn of duty as President.

Under the terms of Rule 25, 33 persons ceased to be members of the Society owing to non-payment of their annual subscriptions, a decrease of 4 since 1936. The total number of members is 734 (17th March, 1938) : this number shows an increase of 2 during the past year. The number of subscribing libraries is 246, that is to say 6 less than in the previous year. The number of Library Associates has decreased from 24 to 20, and Student Associates decreased from 5 to 3, though two of them have become Library Associates at an increased subscription.

The number of visits paid to the Library by Students during the year was 861, and the number of books lent to members was 800. 148 books were lent to affiliated libraries through the National Central Library, and 80 were borrowed by members of the Society through that clearing house.

Lectures.—One of the items of interest provided for members of the Society consisted of the lectures, which are given from time to time on different Oriental subjects. The following were given during the past year ; almost all were illustrated by lantern slides :—

“Richard Burton.” By Sir Arnold Wilson. Burton Memorial Lecture.

“What the Modern World owes to Ancient Egypt.” By Professor Blackman.

“The Hittites : some aspects of their Art and History.” By Mr. R. D. Barnett.

“A Visit to Bali and Java.” By Lady Hosie.

“A Journey of Archæological Exploration in South Western Iran (1935–36).” By Sir Aurel Stein.

“Japanese Myth.” By Professor Kochi Doi.

"Exploring the Past in Cyprus." By Mrs. Olive Murray Chapman.

"Among the Naga Tribes of Assam." By Dr. Christophe von Führer-Haimendorf.

"Extracts from the Chronicle of Yunini." By Professor Margoliouth.

"The Archæology of Hindoo Sumatra." By Dr. F. M. Schnitger.

"The Earliest Hebrew Writings: from Ras Shamra." By Mr. Theodore H. Gaster.

Universities Prize Essay.—Two alternative subjects were prescribed by the Council for the Universities Prize Essay Competition for 1937: either "Tamerlane" or "The Relations of the Greeks with the East". The prize of £20 and Diploma were awarded to Mr. D. P. Costello of Trinity College, Cambridge, for his essay on the second of the two subjects. Other essays submitted were of such a high standard that a special prize consisting of a book was awarded to Mr. John Bowman, of Glasgow University, for his essay on the first subject. Cambridge has now won the prize twice, Bristol twice, and Oxford once.

The following books were published by the Society during the past year:—

Oriental Translation Fund, No. 34: *Ibn Abi'l Dunyā's Kitāb al-Malāḥī*, by J. Robson.

Prize Publication Fund, No. 15: *Early Sāṃkhya*, by E. H. Johnston.

Forlong Fund, No. 16: *Kashmīri Sounds*, by T. Grahame Bailey.

Mr. Vicaji D. B. Taraporevala of Poona has very generously offered to endow a Trust Fund for the publication, under the auspices of the Society, of original works on Zoroaster and Zoroastrianism. The details are being arranged by the Hon. Treasurer.

It is interesting to note that, notwithstanding the curtailment of the size of the *Journal*, its sale has not only not been prejudiced thereby, but has steadily risen.

Countersigned { R. E. ENTHOVEN, Auditor for the Council.
 C. N. SEDDON, Auditor for the Society.

6th April, 1938.

By the provisions of Rules 28 to 30, an influx of new members of Council is ensured every year. During the present Session we lose the services of Sir Edward Maclagan as the senior Vice-President and four Members of Council after four years of office under Rules 30-32. Your Council recommends that these vacancies be filled by the election, through the appointed method, of :—

As Vice-President : Dr. M. Gaster.

As Members of Council : Professor H. W. Bailey, M.A., D.Phil.
J. Heyworth-Dunne, Esq.
Sir Edward Maclagan, K.C.S.I.,
K.C.I.E., M.A.
H. N. Spalding, Esq.
Sir Richard Winstedt, K.B.E., C.M.G.,
D.Litt.

The three Honorary Officers must retire as required by the Rules ; but they are eligible for and are recommended for re-election to their respective offices. We regret that ill-health has led Dr. Blagden to resign his place on the Council as Vice-President, where his great experience and wide knowledge in all matters connected with the Malayan Archipelago has been of the utmost assistance to the Society. Their places are recommended to be filled as under :—

As Vice-President : L. C. Hopkins, Esq.

As Hon. Librarian : A. G. Ellis, Esq.

As Hon. Secretary : C. E. A. W. Oldham, Esq.

As Hon. Treasurer : E. S. M. Perowne, Esq.

Dr. Blagden is recommended for appointment as Honorary Vice-President in grateful recognition of his valuable services to the Society over a long period.

The accounts of the Society for 1937 have been audited as usual, both by a professional firm and by a board appointed by you at the last Anniversary General Meeting. This board consisted of Mr. R. E. Enthoven, for the Council, Mr. C. N. Seddon, for the Members, and Sir Nicholas Waterhouse for the

professional auditors. The meeting was held on 6th April, and the auditors reported as under:—

“The Professional Auditor has explained the accounts to us, and as usual complimented the officials of the Society on their accuracy and completeness. We note again that the statement of receipts and expenditure does not give an accurate presentation of the financial position. In addition to the decrease in the final balance compared with 1936, there is to be noted the usual encroachment on assets due to utilizing full commuted subscriptions for the current expenses of the Society instead of investing them. In spite of special efforts to secure donations and subscriptions, the annual income appears to have fallen short of expenditure by about £80. Some additional source of revenue or an alteration in the expenditure is desirable if the Society's resources are to be saved from gradual dissipation. We view the position with some alarm.

R. E. ENTHOVEN (for the Council).
C. N. SEDDON (for the Society).”

The accounts are now presented for examination in detail.

Under Rule 81 the Professional Auditors, Messrs. Price, Waterhouse and Co., retire, but, being eligible, they offer themselves for re-election. They kindly give their services to the Society at a very much reduced fee, for which the Society is grateful. It is recommended that the Auditors for the ensuing Session be Lt.-Col. D. L. R. Lorimer for the Council, Sir Richard Burn for the Members, and Messrs. Price, Waterhouse and Co. as the professional auditors.

The Honorary Solicitors, who have kindly assisted us for so many years, freely and without fee, are still Messrs. T. L. Wilson and Co.; Mr. D. H. Bramall has always been most generous and helpful in giving his professional advice whenever required by the Society, which is very grateful to him.

The congratulations of the Society are due to our Director, Emeritus Professor D. S. Margoliouth upon the dinner held

in his honour in the Hall of New College, Oxford, of which he was a Fellow for 57 years, in recognition of the distinguished services rendered by him as Laudian Professor of Arabic at that University ; also to Professor H. A. R. Gibb on his succession to that Chair, and to Professor E. Hamilton Johnston on his appointment as Boden Professor of Sanskrit at the same University.

Mr. Lewis C. Loyd, of 25 Moore Street, S.W. 3, has, very generously, presented to the Society the Eckenstein Collection of all the works of Sir Richard Burton. The presentation takes us one step nearer to the realization of a worthy Burton Memorial. The donor writes :—“ I believe the collection to be practically complete, that is, that it contains a copy of every edition of the books properly so-called, and also copies of, at any rate, the great bulk of miscellaneous papers and articles contributed by Burton to periodicals.”

The Islamic Research Association

This Association was founded in 1933 with headquarters in Bombay, its objects being “ the promotion of research in all branches of Islamic learning, the giving of aid, financial and other, to scholars doing research, and of authoritative information on Islamic subjects to those who desired it ”. The six Founder Members were A. M. Mecklai, Dr. M. B. Rehman, Dr. U. M. Daudpota, W. Ivanow, Saif F. B. Tyabji, and Asaf A. A. Fyzee. The first of these is President of the Association, the others, with him, constitute the Executive Committee. The Agha Khan (a liberal benefactor to the Association) is its Patron, and Fellowship was conferred on twelve persons who have written on Islamic subjects, nine of them Europeans. The membership (open to “ every person, regardless of sex, religion, or nationality ”, with an annual subscription of 3 rupees or 5s.) now stands at eighty-three, each year showing some increase.

The occasion for its foundation was the preparation by W. Ivanow of a number of works bearing on the Ismā'īlī sect, of which the Royal Asiatic Society published his valuable bibliography. The first four volumes issued by the Association all bear his name ; they are all Persian texts reproduced by lithography, with Introductions and in two cases English translations ; they were all very favourably reviewed by Professor Nicholson in this *Journal* for April, 1937. The Association has earned the gratitude of Islamic students and indeed of students of religion generally by publishing them.

The fifth volume is a treatise on Arab Navigation in Urdu by Sulaiman Nadwi of Lucknow, who is known to scholars as editor of the posthumous folios of Shibli Nu'man's Urdu Biography of the Prophet. The treatise is mainly historical and geographical, and gives in parallel columns passages from Arabic authors with Urdu translation. The author traverses M. Hartmann's assertion that the Muslims in general were afraid of the sea and unsuccessful in naval warfare.

Of the sixth volume, Dr. Arberry's edition of *The Book of Truthfulness* by al-Kharrāz, in Arabic with English translation, a review will shortly appear in this *Journal*.

Since the Association has been in existence for only a few years and its financial resources are at present very modest, this constitutes a fine record. In his Presidential Address delivered on 5th April, 1937, Mr. A. M. Mecklai gave an account of the origin, the aims, and the work of the institution, emphasizing its freedom from political and religious propaganda, and the care taken to follow the most approved methods of research, involving "patient, exhaustive, and critical examination of all relevant material". Its ideals being identical with those of our own Society, which deals with a much vaster field, we can only wish it continued success and extension.

Notices

On account of the summer vacation, it would be greatly appreciated if correspondence could be reduced to a minimum during the months of August and September.

Members and subscribing libraries are reminded that, by Rule 24, the annual subscriptions for the coming year are due on 1st January, without application from the Secretary. A great saving would be effected if all members would kindly comply with this rule.

By authority of the Council, the Library and Offices of the Society will be closed from 25th till 31st December, inclusive.

DR. B. C. LAW TRUST SERIES

The first period during which MSS. may be submitted by competitors for publication in the above series, lately founded by Dr. Bimala Churn Law, of Calcutta, will close on 31st December, 1938. Details are given in the loose sheet enclosed in this number of the *Journal*. They may also be obtained on application to the Secretary, Royal Asiatic Society, 24 Grosvenor Street, W. 1.

FORTHCOMING EVENTS

The Second Session of the International Congress of Anthropological and Ethnological Sciences will take place at Copenhagen, between 31st July and 6th August, 1938.

We offer our congratulations to Sir James G. Frazer, O.M., F.R.S., upon the honour bestowed upon him by the Greek Minister in London, on 26th May, 1938. The Diploma of Doctor of Philosophy of the University of Athens was presented to him in recognition of his distinguished contributions to Greek classical learning. We also congratulate Prof. A. S. Tritton, M.A., D.Litt., upon his recent appointment to the post of Professor of Arabic in the University of London. He has been the Head of the Department of The Near and Middle East at the School of Oriental Studies for some time.

PART IV.—OCTOBER

The Instructions of the East India Company to
Lord Macartney on his Embassy to China
and his Reports to the Company, 1792-4.

Part III: Later Reports and a Statement of the Cost of the Embassy.¹

EDITED BY EARL H. PRITCHARD

(Concluded from p. 396.)

[Document No. 4]

LORD MACARTNEY'S SECOND REPORT TO THE EAST INDIA
COMPANY²

Canton, January 7th, 1794.

To the Chairman and Deputy Chairman,
of the Honorable East India Company.

Gentlemen,

In a letter which I had the honor of writing to Mr. Dundas Secretary of State in November [9-11th] last, I communicated to him my intention of convoying in the Lion, if necessary, your Ships of this Season to England and in my letter of last month,³ I gave him my reasons why I suffered the five

¹ The editor is indebted to the India Office for kind permission, obtained through Mr. W. T. Ottewill, Superintendent of Records, to publish Documents Nos. 4, 5 and 6 to follow, and to Cornell University Library, Ithaca, New York, for a similar kind permission to publish Document No. 7, extended by Mr. Otto Kinkeldy, the Librarian.

² MSS. India Office, *China: Macartney Embassy*, xcii, 439-440 and xciii, 245-6, of Part 3.

³ Besides the letter of 9-11th November, 1793, to Dundas, Lord Macartney wrote two further letters to him, one on 23rd December, 1793, and one on 7th January, 1794. These letters are in MSS. India Office, *China: Macartney Embassy*, xcii, 393-406 and 443-6, also xciii, 217-228 and 249-250 of Part 3. The necessity of convoying the Indiamen was of course caused by the outbreak of the war with France.

Ships which I found laden on my arrival at Canton to sail from thence without waiting for the remainder, which tho more in number, were represented as more in need of protection. I am confirmed in my resolution of accompanying the latter, by the accounts received within these few days, of the Enemy having been in force in the straits of Sunda, where one of your Ships the *Princess Royal* has been captured.¹ As this event must give you some alarm with regard to the safety of your homeward bound Ships now lying here, it will be some satisfaction to you to know that nothing shall prevent me from accompanying them in His Majesty's ship the *Lion*, whose force will, I trust, be sufficient for their protection.

The Vice-roy of Canton to whom I have given a full account of the hardships under which your trade as well as your agents labor here,² has already begun to take them under consideration. He has accordingly published two edicts for the general protection of Foreigners from the insults and impositions of the Natives.³ He has agreed that our Ships shall not for the

¹ The five ships were allowed to depart without convoy to avoid demurrage charges and because they were heavily armed and probably capable of taking care of themselves. The *Princess Royal*, Indiaman, was captured off Anger Point, in the Straits of Sunda, between Java and Sumatra, in September, 1793, by three French ships. A small Country ship from India, the *Polly*, was captured by a French privateer in October (Morse, *Chronicles*, ii, 211).

² Two lists of grievances and requests for privileges were given by Lord Macartney to the new Viceroy, Ch'ang Lin 長麟, one on 20th November, 1793, the other on 1st January, 1794. The first is printed and the second is summarized in Morse, *Chronicles*, ii, 252-4, and an abstract of both are given in Pritchard, op. cit., pp. 357, 362. The originals are found in MSS. India Office, *China*: *Macartney Embassy*, xciii, 229-231, 253-263, of Part 3. The second document in particular is a long and reasoned statement of great importance.

³ The edicts referred to were issued on 2nd and 5th January, 1794, and were for the most part hollow verbiage. The first threatened with dire punishment anyone who molested, plundered, annoyed, abused, or defrauded the English and was especially directed against persons who maintained night boats near the factories and by means of liquor and loose women inveigled foreigners into iniquities. The second prohibited extortion from Europeans by the magistrates, military, or other persons (MSS. India Office, *China*: *Macartney Embassy*, xcii, 475-8, 483-6, and 513-14, 517-18).

future be exposed to the delay or danger of stopping in the open roads of Macao¹; but may proceed immediately to the Island of Lintin [nearer Whampoa and in a less exposed position]; where they will be in safety; a point considered of material consequence, and among the objects I pressed upon him. He promises in every other instance, to grant whatever shall not be found inconsistent with the laws and customs of the Chinese.²

I have the honor to be,
Gentlemen,
Your most obedient and most faithful humble
servant

MACARTNEY.

[Document No. 5]

LORD MACARTNEY'S THIRD REPORT TO THE EAST INDIA COMPANY³

Lion, *in the Channel*,
September 4th, 1794.

To the Chairman and Deputy Chairman,
of the Honorable East India Company.

Gentlemen,

Immediately on my arrival at Canton from Pekin in December last, I had the honor of addressing to you a sketch of my negotiations at that Court; referring you for a more circumstantial account to my dispatches for the Secretary of State, under whose immediate direction my mission was undertaken, as I did him to my letter to you for my proceedings,

¹ The ordinary procedure was for incoming ships to stop outside Macao, where pilots were obtained to take them on to Whampoa. It does not seem that the Viceroy's promise produced any essential change in procedure.

² The Viceroy's reply to Macartney's requests admitted abuses and oppressions, promised care and speed in prohibiting them, and promised "that so far as the Laws of China will permit, we shall be peculiarly desirous and ready to settle every thing to your entire Satisfaction". Nothing further was done (MSS. India Office, *China: Macartney Embassy*, xcii, 467-8, 509).

³ MSS. India Office, *China: Macartney Embassy*, xcii, 487-9.

and observations in regard to your particular instructions to me¹; thus desirous to spare, as much as possible, to each, in your mutual communications, the trouble of perusing the same things in my letters to both. From the same motive, I deemed it unnecessary to enumerate separately to you the prospects of public Advantage, that might have resulted from my protracting somewhat longer my stay in Asia, especially as the more pressing, and indeed immediately essential object of affording protection to the great embarked property of the Company, under the alarming circumstances of the Enemy lying in wait to seize it, had superseded every other consideration; and as the intelligence in the Indian Seas of the capture of two² outward bound ships in your employ, must have occasioned you no slight anxiety for the safety of those returning to Europe, I took the opportunity of assuring you, by a Swedish Ship [*Sophia Magdalena*], of my determination of accompanying them home in His Majesty's Ship the Lion, as their Convoy. And I now with much pleasure hasten to inform you that, not only the thirteen Ships, which left China with us, but [three] others from Bengal, and [two from] Bombay, that joined us at St. Helena, laden with Cargoes for the Company to the amount of several millions, are now safely arrived in the Channel. I postpone to the time of my being able to wait upon you in London, to relate to you the Steps I took, and the advances I made, at Canton, for putting your trade, and agents there on a footing very different from what has been hitherto experienced. The papers (No. 1 and 2)³ which I addressed at different times to the Viceroy at Canton, explain perhaps more fully the extent of the hardships suffered there, than is contained in any former communication to you. The general answer of the Viceroy (No. 3)⁴ and the copy of the two edicts (No. 4

¹ Macartney's last official report to Dundas was on 4th September, 1794, and is found in *ibid.*, xciii, 281-5, of Part 3.

² See *supra*, page 494, note 1.

³ See *supra*, page 494, note 2.

⁴ See *supra*, page 495, note 2.

and 5)¹ immediately published by him, may enable you to form some idea of what may be expected from him ; and his exalted character for justice, and benevolence adds much to the prospect. The Natives, indeed, in Office, and in Trade, are interested in deceiving him to the prejudice of Foreigners, and no slight efforts are required to be constantly exerted by the latter in their own defence. On this occasion, I must observe that your Commissioners at Canton appear to have conducted your Affairs, as far as I was concerned in them, with much prudence, and ability. I had the ready assistance of their advice, and information ; and among other of their regulations likely to redound to the future prosperity of your trade there, They have encouraged in the Junior Servants a desire of acquiring a knowledge of the language of the Country,² without which your Agents will be always at the mercy of men [the Chinese linguists who spoke pidgin English] sufficiently inclined to impose upon them thro dishonesty, or to betray them thro fear. The exterior marks of respect shewn [*sic*] to the Embassy by order of the Emperor has had however already a good effect, in preventing the People of the Country from treating Englishmen, as formerly with contempt, and from considering them as objects of easy prey, and unpunishable insult.³ The disposition of the Chinese is certainly become more favorable towards us, and it will be the interest of the Company to maintain and improve it.

(Signed) MACARTNEY.

¹ See *supra*, page 494, note 3.

² Prior to this time only two of the Company's servants, James Flint (in China from 1736 to 1762) and Thomas Bevan (in China from 1753 to 1780), had acquired any knowledge of Chinese. In 1792 the Secret and Superintending Committee, after some difficulty because of the prohibition upon the teaching of Chinese to foreigners, obtained a teacher, and three of the writers at the factory, Thomas Charles Pattle, John William Roberts, and John W. Travers began the study (Morse, *Chronicles*, ii, 209). None of these men progressed very far in their studies, and the Canton factory had to wait until the arrival in 1800 of George Thomas Staunton, who had begun his study of Chinese while accompanying his father on the Macartney Embassy, before it had a competent interpreter.

³ Macartney here seems to be too optimistic.

[Document No. 6]

LETTER FROM LORD MACARTNEY TO SIR JOHN SHORE¹

Macao, February [3], 1794.

To the Honorable Sir John Shore Bart.

Governor General of Bengal &c. &c. &c.

Sir,

I make no doubt that you were made acquainted by His Majesty's Ministers before you left England with the occasion and object of my Embassy to this quarter of the World. I took also the opportunities which offered in the course of my voyage hither, to communicate the same to Lord Cornwallis, who was still then in the Government of Bengal.² Since that period I have been at the Court of the Emperor of China, whose reception was honorable, and gracious. And in consequence of his orders, two edicts have already been published at Canton for the redress of the grievances, under which our trade had hitherto labored there; and the Viceroy has promised, and seems disposed to grant every indulgence to our Merchants, which may be consistent with the laws, and customs of the Country.

A variety of circumstances has impeded, for the present the attainment of other objects in regard to opening new Channels for the introduction of British manufactures into every part of the Empire. The very great age of his Imperial Majesty tends to disincline his mind against suddenly giving way to novelties, or alterations of any kind. And the Government itself is become, of late, more than usually cautious, since they heard of the confusions in France, and of the attempts made by the Revolutionists there to disseminate

¹ This letter has been included here, although it is enclosure No. 3 in Macartney's letter of 4th September, 1794, to Henry Dundas, because it relates primarily to the carrying out of instructions given to Lord Macartney by the Company. It is found in MSS. India Office, *China: Macartney Embassy*, xciii, 295-8.

² Sir John Shore succeeded Lord Cornwallis as Governor-General in October, 1793.

their principles every where else. These accounts have had such an effect in the first moments, as to induce the Mandarines to intercept the correspondence of all the European Missionaries at Pekin, tho no set of men can hold the late changes in greater horror, and by which, indeed, they are deprived of the annual stipends that had until then been regularly remitted to them. The Chinese Ministers could not, under such impressions, be much disposed to relax from their usual system of confining all mercantile connexions with the western world to a remote corner of their Empire. In addition to those circumstances, it seems likewise that the Commander of the Emperor's Troops in Thibet [Fu K'ang-an 福康安], on his return from thence, had misrepresented to his Imperial Majesty the procedure of the Bengal Government on his application against the Raja of Napaul, notwithstanding which, succours were said to be afforded to him.¹ While we were supposed to have given assistance to an Enemy of the Chinese, they could not be in the humour of granting to us any signal favors. Tho I was convinced the assertion was ungrounded, and denied it accordingly, yet I happened not to be possessed while at Pekin of the documents I have since lately received from Bengal, and England, which place the transaction in its true light, and prove the friendly disposition shewn [sic] by us on the occasion. This business, however, will be soon explained, I trust, to the satisfaction of the Emperor, and the advantage we took of our power in India, to render him service, can scarcely fail to remove the jealousy he might have been excited to entertain of it. Our political situation in Bengal may even contribute with other motives, to procure for us the full extension, we desire, of our commerce throughout the Empire.

It was thought likewise possible to form mercantile con-

¹ A complete account of this affair is given in Colonel W. Kirkpatrick, *An Account of the Kingdom of Nepaul, Being the Substance of Observations Made during a Mission in That Country in 1793* (London, 1811), especially the Appendix.

nexions to advantage with other parts of the East,¹ for which places I was also honored with full powers of treating in case opportunities should be favorable; but as his Majesty's Ship the Lyon had orders to convey me out, and home, I think myself bound to avail myself of that circumstance, to accompany the principal fleet of the Company's ships this season from Canton, where no slight apprehensions are formed of their danger, if they attempted to proceed without a convoy; especially as intelligence has lately been received of the Enemy being in force in the Chinese, or Indian seas, and of the Princess Royal outward bound, having been captured in the Straits of Sunda. No service I conceive, can be more immediately important than that of guarding so much property belonging to the Company, as is now embarked here for England.

Beside the general instructions, which I received from His Majesty, thro one of His principal Secretaries of State, relative to my mission to China, several matters were particularly recommended to me by the Secret Committee of the Court of Directors. Among others they observe that on many accounts it would be desirable to raise the tea plant within their own territories in India, for which purpose they request I should endeavour to procure, if possible, some of the plants, of the best kind, and to transmit them to Bengal, where it seems indeed that persons conversant in Agriculture were of opinion, that in the district of Rungpoor [Rangpur], the soil, and situation were fit for the cultivation of it. Fortunately the present Viceroy of Canton [Ch'ang Lin], as he travelled with me thro the Province of Chekiang to take possession of his new Government, led us thro places, where the tea grows to perfection, and very liberally allowed me to take up several young plants of the best kind, which I ordered to be put up in proper boxes, with earth, in which

¹ Macartney was given Credentials to the Emperor of Japan, the King of Cochin China, and blank Credentials to all other kings and princes of the East Indies (MSS. Cornell, *Macartney Correspondence*, viii, No. 329; v, No. 210; and i, miscellaneous unnumbered Credentials).

they continue still to thrive. I have appointed Dr. [James] Dinwiddie,¹ a Gentleman of Science, who accompanied me to China, to take those plants to Calcutta, to be delivered to your orders, and as they are to be carried on board a Vessel, the Jackall, belonging to the Company, and commanded by a careful Officer (of the Bombay Marine) Mr. [John] Procter, I flatter myself they will arrive in good order and fit for the trial the Company wishes to make of them.² I take the same opportunity of sending some plants of the varnish tree, and the Tallow tree, both which as they are esteemed highly valuable in this Country, they may prove likewise beneficial in Bengal.

The Company having observed, that the silk of the Province of Nanking is superior to what is made in their own possessions, is desirous of finding out the causes of the difference in order to a discovery of what, if possible, may render their own equal to the Chinese. With this view a set of queries relative to the management of the silk mulberry tree in Nanking was put into my hands. The only answers I could as yet obtain

¹ According to W. J. Proudfoot's *Biographical Memoir of J. Dinwiddie*, mentioned in Part II of this paper, Dinwiddie was born 8th December, 1746, and died 19th March, 1815. He received his Master of Arts degree from the University of Edinburgh in January, 1778, and was granted the LL.D. degree by the same institution in 1792. While in India he delivered lectures on experimental philosophy at Calcutta under the patronage of the Governor-Generals, and was for a time employed in practical experimentation by the Board of Trade at Calcutta. He also lectured at Madras and was a teacher of mathematics in the College of Fort William from 1800 until his resignation in 1805. He departed for England in 1806 (see also *Catalogue of the Edinburgh Graduates* [Edinburgh, 1858], pp. 213, 259, and J. Dinwiddie, *Syllabus of a Course of Lectures on Experimental Philosophy* [London, 1789]).

² It appears that the tea plants reached India and were planted in the Botanical Gardens at Calcutta, where other tea plants had been cultivated since 1780. In spite of the apparent interest of the Court of Directors in the commercial cultivation of the tea plant in India, as shown in the letter of instructions to Lord Macartney, "political and commercial objections connected with the company's highly profitable tea trade with China conspired to prevent the carrying out of" any such schemes (W. H. Ukers, *All About Tea* [New York, 1935], i, 134, 133). This is an interesting point and deserves further investigation.

I have given to Dr. Dinwiddie,¹ to be delivered to you, for the use of those, who are concerned in that manufacture in Bengal; and as some persons have suspected, that the insects which produce the silk in different Countries are not every where the same, I send by the Doctor also some of the Eggs of the China silk worm, which may ascertain that fact, as far as relates to India, and serve to propagate a new breed, if it should prove to be different from what is now reared there. As Dr. Dinwiddie is going upon the Public service, I have promised him that you will grant him whatever allowance you will think reasonable; and his services may not be confined to the care of the objects I have entrusted to him; for the Company having very liberally extended its views beyond mere commercial advantages, had, I understand, maintained an Astronomer in Bengal, who is now deceased²; his loss may be supplied by Dr. Dinwiddie, who is indeed considered as conversant with several other branches of science connected with the mathematics; his attention, indeed, to the very curious, and complicated machines, I brought from England, which required to be properly put together, after they were brought on shore, prevented him from attending me to the Emperor's Court at Gehol in Tartary, where his Imperial Majesty always spends the summer season. I have supplied the Doctor with several instruments belonging to the Company, agreeably to the inclosed list,³ the amount of which may be deducted

¹ For a list of these questions with answers to them see MSS. Cornell, *Macartney Correspondence*, ix, No. 379. The answers relate to the culture of the mulberry tree. No answers relating to the silk-worms were obtained. See also *infra*, page 507, note 3.

² Probably Reuben Burrow (1747-1792), an astronomer and mathematician who went to India in 1782 and was appointed to teach mathematics to the Engineers, and on the Survey of Bengal. He was an early member of the Asiatic Society of Bengal and contributed eleven papers on Hindu mathematics and astronomy to the Society and to *Asiatic Researches* (Buckland's *Dictionary of Indian Biography*).

³ The articles given to Dr. Dinwiddie, valued at £279, included a pile driver, a small steam engine, several silk reeling machines, several pumps,

from his salary, or allowances. I take the liberty to recommend him to you as a man of learning and merit.

I have the honor to be &c. &c.

(Signed) MACARTNEY.

P.S.—You will please to pay Lieutenant Procter a reasonable allowance for Dr. Dinwiddie's passage.

[Document No. 7]

LORD MACARTNEY'S FOURTH REPORT TO THE EAST INDIA COMPANY¹

Curzon Street

November 26th, 1794.

Wm. Devaynes Esq., Chairman
of the East India Company.

Sir,

I received from Mr. Inglis the Extract you were pleased to send me from the proceedings of the Secret and Superintending Committee of Supercargoes at Canton, dated the 3rd of February last.² As it contains a list of articles which

an electrical machine, an artificial eye, some lamps, a theodolite, several microscopes, a camera, a magic lantern, a number of electrical and mathematical instruments, an assortment of chemical supplies, and various other items (MSS. Cornell, *Macartney Correspondence*, x, No. 422).

¹ MSS. Cornell, *Macartney Correspondence*, vii, No. 312, and MSS. India Office, *China: Macartney Embassy*, xcii, 529–532. William Devaynes became Chairman of the Court of Directors in the spring of 1794. The letter in the Cornell manuscript is unsigned.

² At Canton on 28th December, 1793, Lord Macartney gave to Henry Browne, Eyles Irwin, and William Jackson a long list of products which he thought could be sold to advantage in North China. The list included bronze figures, agates and bloodstones, Derbyshire globes, green serpentine stones, Gill's sword blades, firelocks, writing paper, girdle buckles, saddles, whip-lashes, knives, forks and spoons, brushes, snuffers, combs, nut-crackers, scissors, pocket knives, files, toys, necklaces and earrings, looking glasses and plate glass, Virginia cloths, fleecy hosiery, and garters. In their proceedings for 3rd February, 1794, the Secret and Superintending Committee recorded that Shy Kinqua and Mowqua, two of the leading Hong Merchants, were sceptical as to the market value of the articles. Shy Kinqua, however, promised to attempt to dispose of small trial shipments by sending them

I delivered to the Supercargoes, as what in my opinion might be introduced with advantage at Pekin, and their consequent recommendation to the Court of Directors, to send Specimens of such goods to China, their recommendation accompanied however with a declaration that those Articles appeared to them better calculated for the speculation of the Individual Trader than for the extensive Scale of the honorable Company's Investment. The intention of communicating this Extract to me, was no doubt either to be informed whether I persevered in my former opinion on this Subject, or whether I agreed with the suggestion of the Supercargoes, or lastly how soon I should think it advisable to make the experiment of sending out the Specimens alluded to, and I thought it possible that a specific question might be put to me in writing, to which an answer would be expected from me, but in order to lose no time, I shall freely mention to you at once whatever occurs to my mind at present on these points.

I certainly still think, that the Articles I had specified and indeed others of British Manufacture might be introduced with advantage at Pekin, and in most other parts of the Chinese Empire. Its Inhabitants however wedded to their ancient manners and opinions, did not appear to me to entertain any particular predilection for articles of consumption on account of being produced or prepared in their

to North China under the direction of one of his men. The Committee therefore recommended that specimens of these articles be sent to China, but expressed the view that such articles were better adapted to Private trade than to the Company's trade (MSS. Cornell, *Macartney Correspondence*, vii, No. 322). Mr. Inglis was presumably a secretary at the India House. The Hong merchant Shy Kinqua mentioned here is the son, Gonqua, of the merchant mentioned in Part I of this article. As business was carried on in his father's name, he too was known as Shih Chung-ho 石中和, and was proprietor of the *Erh-i hang* 而益行. Mowqua became a Hongist in 1792. His official name was Lu Kuan-hêng 盧觀恆, his business name, Lu Mao-kuan 盧茂官, and the name of his Hong was Kuang-li 廣利. See Liang Chia-pin 梁嘉彬, *Kuang-tung Shih-san Hang K'ao* 廣東十三行考, pp. 216, 218, 284-7, 302-7.

own Country, but on the contrary seemed quick enough in finding out any superior quality or convenience in goods, presented to them from abroad, and equally eager to possess them. It is, however, to be observed peculiarly of China, as indeed in some degree of most other Countries, that it supplies to the natives in abundance all the real necessaries, and most of the luxuries of life, and therefore that foreign Goods are so far superfluous among them until new wants shall be excited in their minds by the display of somewhat more convenient or more pleasing than what they had hitherto enjoyed, and in this sense every foreign Trade may be considered as in some measure forced, requiring consequently no slight degree of management, patience and zealous attention to push it on, as the history and gradual progress of the Company's trade hitherto to China has sufficiently evinced.

Whether the Articles I have specified be introduced into China as part of the Honorable Company's Investment, or by the Individual Trader, does not, in a national consideration, appear to be of material importance, provided the amount be the same. But that any trade cannot be carried on with China to great extent by Individuals is among the causes which have occasioned the Establishment and continuance of the Company. The case applies much stronger when relating to the introduction of new Articles, in which the risk is certainly the greater, and which requires not only the friends and advances, but also the influence with the Natives of a great and united body. The Natives will scarcely purchase from Individuals except what is already in demand ; nor can afford to make the speedy payments necessary to private traders in return for goods to be sent on speculation above a thousand miles. Individuals ought certainly to be allowed to deal in those Articles in concurrence with the Company, as they are allowed to deal in Teas in the returning Cargoes, and in proportion as the means which the Company alone possesses, shall have procured a vent for such Commodities, Individuals will partake in the Trade, thus gaining

instead of loosing by the part which the Company shall have taken in it. The objects themselves indeed might have appeared too minute and insignificant to the Supercargoes, and thus unworthy the notice of a great commercial body, and so they certainly will be while confined to the small quantity of them which Individuals can contrive to introduce, or even to what the Company can effect in the beginning; but no Article continues to be trifling, for which millions of consumers may gradually as in China be procured; and Scissars [sic] or Snuffers may like the cuttings or shreds of cloth,¹ be found in future fit to enter into the Company's Investment; much of the success may depend however on the time and manner of making the experiment. The Hong Merchants at Canton satisfied with the Trade already in their hand, will not naturally be forward in embarking in new enterprizes, for which they must take new measures and precautions. Among many Articles some will turn out not suitable, and others will be long on hand. These Merchants will certainly be little anxious unless they find your Agents particularly and heartily urgent with them on the occasion. A mere and cold acquittal of duty on the part of your Agents, recommending to the Hong Merchants to take and spread those Articles, as they do to you to send them out, does not promise much effect; and while the Supercargoes continue in opinion that such goods should be left to the Speculation of the individual Trader, it may be difficult for them to express sentiments of a contrary nature to the Hong Merchants, or to inspire them with all the zeal which may be necessary to overcome the difficulties and hazards of such undertakings. I cannot therefore be sanguine in proposing the experiment to be made, until your Agents shall be brought to think as favorably of the prospect as I do.²

I have the honor to be with
great consideration

Sir,

MACARTNEY.

(For notes 1 and 2 see p. 507.)

P.S.—I have the honor to send you such answers as I could obtain to the Queries relative to Silk,³ which I was desired to make in China by the Chairman & deputy Chairman in their letter of the 8th of September, 1792.

[Document No. 8]

COST OF THE MACARTNEY EMBASSY⁴

No detailed account of the cost of the Macartney Embassy has been published, although John Barrow in his *Life . . . of the Earl*

¹ Considerable quantities of cloth cuttings were imported in Private trade (Pritchard, op. cit., p. 171).

² An experimental shipment of Irish linens in 1794–5 was disposed of at invoice cost (£845), and in 1795–6, as a result of Lord Macartney's recommendations, Irish linens invoiced at £589, stationery invoiced at £276, and sword blades valued at £248 arrived at Canton. Mowqua sent the linens to Manila at two-thirds prime cost because there was no market for them in China. Puankhequa sent one case of stationery to Peking as an experiment, but the Chinese merchants in general insisted that it could be used only as presents. No merchant would touch the sword blades because they could be used only as presents, and they were finally sent back to Europe (Morse, *Chronicles*, ii, 153, 256, 266–7). Puankhequa was the son of Puankhequa (P'an Wen-yen 潘文巖) who died in 1788. He at times may have been known by his father's name, but his official name appears to have been P'an Chih-hsiang 潘致祥, his business name, the same as his father's, was P'an Chi-kuan 潘啓官, and the Hong name was T'ung-wen 同文. See Liang Chia-pin, op. cit., pp. 218, 280, 259–273, 286–8.

³ See *supra*, page 502, note 1. The answers obtained contained the following information: that there were two species of the mulberry tree, one of which bore white, the other black berries, and that the tree bearing white berries was preferable; that the first leaves to sprout were better for the silkworm; that young leaves were given to young worms and mature leaves to full-grown worms; that mulberry trees were planted in the spring; that leaves first appeared in the spring and then two or three times later in the year; that the leaves were sold to persons in the cities who reared the worms; that mulberry trees thrived better on dry soil than did rice; and that no leaves other than those of the mulberry tree were fed to the silkworm (MSS. Cornell, *Macartney Correspondence*, ix, No. 379).

⁴ MSS. Cornell, *Macartney Correspondence*, Nos. 92, 131, 144, 177, 180, 185, 188, 219, 221, 243–8, 290, 307, 343, 345, 347, 349, 354, 395, 411, 422, 436a, 437, 442; MSS. India Office, *China: Macartney Embassy*, xci, 543–590, and xcii, 5–6, 9, 15–18, 23–4, 521, and xciii, 48, 219, 264–270, 280, 603–619; Morse, *Chronicles*, ii, 205, 216, 223, 255–6; Pritchard, op. cit., pp. 291, 294–5, 303–6; and especially Document No. 1 of this paper.

of Macartney (i, 353-4), states that it cost about £80,000. From various papers remaining in the India Office and the Wason Collection at Cornell it is possible to calculate the approximate cost of the mission.

SOURCE OF FUNDS

	£
Presents from the Cathcart Embassy	2,394
Grant of credit from the Directors on 19th January and 8th August, 1792	30,000
Spent beyond grant of credit before leaving London	809
Bills on the Court at Portsmouth (£800 less £35 refunded), September, 1792	765
Gained on exchange of \$20,000 purchased for £4,547	453
Bills on the Court of Directors at Madeira Islands, October, 1792	959
Gross funds provided by the Commissioners at Canton	16,933
Cash to Lord Macartney	£1,200
Bills drawn by Macartney on the Com- missioners	£4,823
Cost of the ship <i>Iphigenia</i> (\$10,500)	£2,625
Supplies and services	<u>£8,285</u>
Total	£16,933
Less property returned to Commissioners	<u>£6,583</u>
Net expense at Canton (T. 31,050)	£10,350
Cash given to Lord Macartney at Portsmouth, September, 1794	7,278
Instalments on Lord Macartney's salary not advanced	23,000
Instalments on Sir George Leonard Staunton's salary	6,000
Court's vote of an Honorarium to Staunton, 5th August, 1795 .	3,000
Court's grant to Messrs. Cobb and Malben, November, 1792, and April, 1793	350
Court's grant to officers of <i>Hindostan</i> , 15th April, 1795, about	300
Total gross funds	<u>92,241</u>

DISTRIBUTION OF FUNDS

Presents bought in London including present to Viceroy	15,953
Other miscellaneous expense in London	2,100
Staunton's expense in Italy in search of interpreters	960
Cost of the <i>Jackall</i>	1,500
Expenses in Portsmouth, September, 1792	750
Presents purchased by Lord Macartney in China	3,582

Cost of the <i>Clarence</i> purchased by Lord Macartney (\$5,000)	1,250
Current expense during the Embassy	5,510
Cost of the <i>Iphigenia</i> purchased by the Commissioners (\$10,500)	2,625
Telescope, services, and supplies purchased by Commissioners	8,285
Lord Macartney's total salary	30,000
Sir George Leonard Staunton's salary	6,000
Honorarium to Staunton	3,000
Salary of the civil suite	7,160
Salary of the guard	2,041
Sir Erasmus Gower's salary	583
Salary of the officers of the <i>Lion</i>	292
Remuneration to Messrs. Cobb and Malben	350
Remuneration to the officers of the <i>Hindostan</i> , about	300
 Total gross expense	 92,241
Deduct resources remaining at the end of the Embassy	13,719
 Value of presents returned to Com- missioners at Canton	 £4,333
Sales value of <i>Iphigenia</i> at Canton (\$6,000)	£1,500
Sales value of <i>Clarence</i> at Canton (\$3,000)	£750
Estimated sales value of the <i>Jackall</i> in India	£1,000
Supplies given to Dr. Dinwiddie at Canton	£279
Amount refunded on carriages in London	£372
Value of wine returned	£370
Duties refunded on <i>Hindostan</i> at Canton in 1794-5	£5,115
 Total resources remaining	 £13,719
Net expense of the Embassy to the East India Company	78,522

364.

The Pargana Headman (Chaudhri) in the Mogul Empire

By W. H. MORELAND

(PLATE V.)

CASUAL references in the chronicles of the time show that the Turkish kings of Delhi recognized, and on occasion utilized, the local functionaries—the headmen and registrar-accountants of villages and parganas—who formed an integral part of the Hindu administrative system. No references to these functionaries have been traced under the Afghan kings, but they reappear in the Mogul period, the literature of which enables us to form some idea of the position and duties, as then understood, of three out of the four. The village headman, renamed *mugaddam*, represented the village in its dealings with the officials, and he was required in particular to be active in agricultural development by bringing the waste land of the village under the plough. The village registrar-accountant, who retained his Hindī name of *patwārī*, kept the records and accounts of the village, and was required to assist the officials in the assessment and collection of the revenue. In the same way the registrar-accountant of the pargana, renamed *qānūngō*, kept the records of the pargana ; and when assessment was made on the village as a unit, his estimate of its capacity to pay was one of the indispensable data. The remaining functionary, the *chaudhrī*¹ or headman of the pargana, scarcely appears in the chronicles of the period, while the administrative literature contains practically nothing to show what he was expected to do, or how he was remunerated ; indeed the only reference to him which has

¹ To prevent misapprehension, it may be explained that this designation has other meanings in towns and markets, and is also occasionally assumed as an honorific prefix to a person's name.

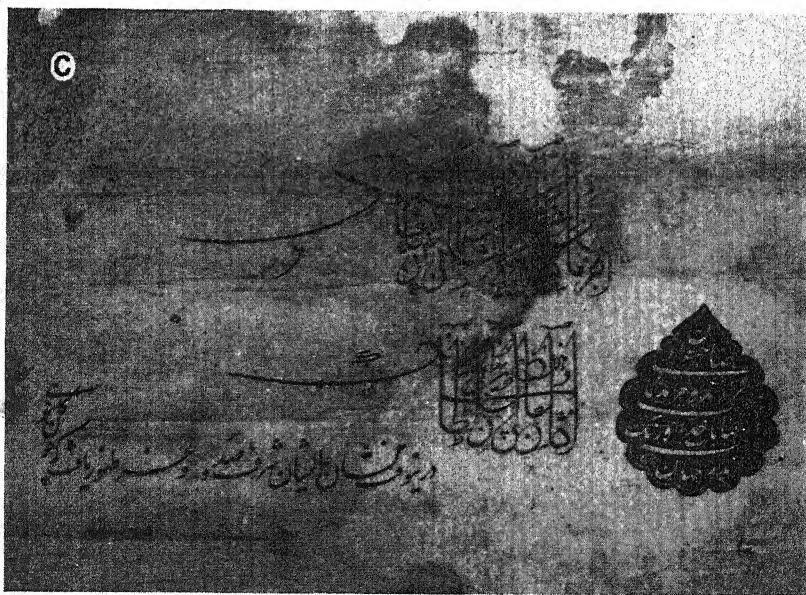

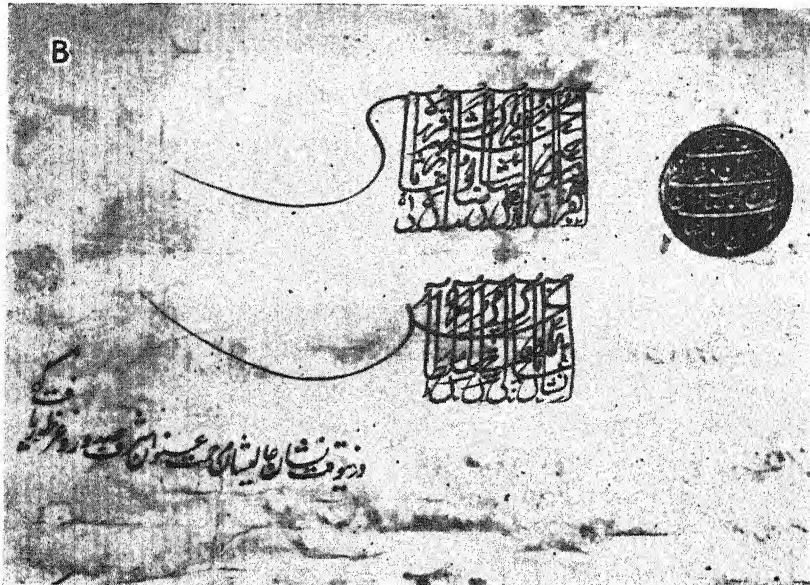

been traced in the *Āīn-i Akbarī* is the statement (Jarrett, ii, 228) that in the province of Berār the *chaudhrī* was known as *desmukh*. This statement shows that the *chaudhrī* was a familiar figure in the north, but it shows nothing more.

The gap in our knowledge can be filled to some extent from some documents preserved in the Revenue Office of the State of Hyderabad, photographs of which have reached me through the good offices of Sir Reginald Glancy, K.C.S.I., K.C.I.E. These documents may be described briefly as follows :—

A. *Parwāna*, dated A.H. 1027, 13th regnal year (of Jahāngīr). Invocation (*Allāhu akbar*) at top ; seal in margin, opposite the second line. The seal is blurred and partly damaged, and the grantor cannot be identified ; presumably he was either the viceroy or the provincial dīwān. The reverse of the document has the names of the villages concerned. Recites that the *desājī*¹ and *desmukh* of pargana Pāthrī had "come to service" (*ba malāzamat āmad*), and that his loyalty had been established ; grants an addition of ten *chāwar* of waste land to his existing *inām* or holding of land free of revenue ; and orders the local officials to give him possession free of all demands for revenue.

Pāthrī (Jarrett, ii, 236, and *Imperial Gazetteer*, xx, 30) lay on the road from Daulatābād to Golconda, and comparison of the diaries kept by two well-known Dutchmen, van Ravesteyn (printed as App. V of Terpstra's *Opkomst der Wester-Kwartieren*), and van den Broeke (Leiden University MS.), shows that the Moguls captured it from Malik Ambar in 1616–17, so that this grant to the *desmukh* of their new acquisition may be taken as a result of his adhesion to the conquerors. The word *chāwar* has not been found in Persian, Hindi, or Marāthī dictionaries, but Sir Henry Elliot (*Supplemental Glossary*, ed. J. Beames, ii, 304) equated it to *chau-har*, denoting land ploughed four times. In the *parwāna* it is

¹ The form *desājī* has not been traced, and is perhaps an error for *desāī*, the Marāthī designation of the pargana headman.

CIPHERS AND SEALS ON NISHANS.

B (above). Cipher of Shāh Jahān : cipher and seal of Murād Bakhsh.
C (below). Cipher of Shāh Jahān : cipher and seal of Aurangzīb.

obviously a unit of area, and may be referred to the *har*, or “plough-land”, which is still known as a unit in the central parts of India. The size of this unit naturally varies with the soil, but it may be thought of as ranging about 12 acres, and a “four-plough-land”, the next higher unit in a scale mounting by fours, would thus be about 50 acres, making the grant some 500 acres in all.

B. *Nishān*, dated A.H. 1059, 23rd regnal year (of Shāh Jahān). Invocation (the *bismillāh* formula) at top: then two ciphers (*tughrā*). The upper and larger cipher is that of Shāh Jahān; the lower and smaller one is of Prince Murād Baksh, whose seal is on the right. On the reverse is a blurred seal (not deciphered) and an office endorsement.

Settles the succession as *desmukh* of the division (*taraf*) of Amwal in pargana Bālgarh, Sūba Telingāna; the viceroy had allowed an adoptive son a half-share, but the emperor overruled this, and accepted the natural son as sole *desmukh*. Orders the local officials to recognize him, and reminds him of the duties he has to perform.

No Bālgarh, and no Amwal, is mentioned in this part of the country in the *Āīn* or the *Imperial Gazetteer*; the reference may be to Balgaon or Walgaon, now in the Amraoti district (*Impl. Gaz.*, xxiv, 352), or to Bālapur in Akola (vi, 234).

C. *Nishān*, dated 19th regnal year (of Shāh Jahān). Invocation (*Allāhu akbar*) at top; then two ciphers as in B, that of Shāh Jahān above, and that of Prince Aurangzib below, with his seal to the right. On the reverse are some endorsements and a seal (not deciphered).

Recites that the son of the late *desmukh* of pargana Pāthrī has given an engagement of loyalty; orders the local authorities and the inhabitants in general to accept him as *desmukh*, and reminds him of his duties.

D. *Farmān*, dated 30th regnal year (of Aurangzib). Invocation (the *bismillāh* formula) at top; below it a cipher, and below it the square seal of ‘Ālamgīr (Aurangzib).

The cipher contains, not the emperor's style, but a verse from the Qur'ān, which Professor Margoliouth has identified as Sūrah iv, 62; "O ye that believe, obey Allāh and obey the Apostle and those in authority among you." The change from *tughrā* to text is in accordance with Aurangzib's well-known character.

Makes an appointment as *desmukh* of pargana Narsī, sarkār Bāsim, Sūba Berār, reminds the *desmukh* of his duties, and orders the local officials to recognize him. Pargana Narsī is mentioned in the *Āīn* (Jarrett, ii, 235).

E. *Farmān*, dated 5th regnal year. Invocation (the *bismillāh* formula) at top; below it a cipher, with round seal to the right. The cipher appears to be a text, but has not been read. The seal too is illegible, and it is uncertain whether the document was issued by Aurangzib or by one of his successors. The latter alternative is suggested by the description of Aurangābād as *Khujasta-bunyād*; for Sir Richard Burn informs me that this description appears on coins only from the year A.H. 1100, which is long after Aurangzib's fifth year. Probably then the *farmān* was issued by Bahādur Shāh or Farrukh-siyar.

Recites that pargana Pāthrī (above) had been divided between two *desmukhs* by Khān Khānān 'Abdur-rahīm when he held it in *jāgīr*, that this arrangement had continued in force, and that the present holder of one portion had offered a *peshkash* (gift) of Rs. 2000 for a *farmān* confirming the partition; confirms it, enumerates the duties, and orders the local officials to comply, and to collect the *peshkash*.

These documents are of three kinds: *farmān*, *nishān*, and *parwāna*. A *farmān* was an order issued by the emperor, and ordinarily bore at the top the imperial cipher (*tughrā*) with the emperor's seal usually to its right, though in D it is below; the first and second lines were written short, the words in them occupying from one-half to one-third of

the full space. No definition of *nishān* has been found in the official literature, but the English records show¹ that the word was used consistently to denote an order issued by a prince holding an executive position such as viceroy, while *parwāna* was applied to an order issued by an executive officer other than a prince.

Document A, the *parwāna*, is plain script, with no cipher, all the lines of equal length, and the seal in the right margin opposite the second line. The *nishāns* (B and C) are in the same form as the *farmān*, with two short lines, but they have two ciphers, the emperor's above and the prince's below, the latter being somewhat smaller than the former. The article on these *tughrā*-ciphers in the *Encyclopædia of Islam* does not deal with Mogul practice, and it will therefore be useful to reproduce the upper portions of these two *nishāns*, showing the ciphers and seals, with the first, shortened, line of the text (see Plate).

The upper and larger *tughrā* in each specimen is that of the emperor ; beginning in the south-east corner, it reads : *Ba farmān Abū'l Muẓaffar Shihābuddīn Muḥammad Ṣāhib Qirān Sānī Shāh Jahān Bādshāh Ghāzī* ; and this agrees with the form of *tughrā* given in the *Bādshāhnāma* (*Bibl. Ind.*, i, 91).

The smaller *tughrā* in B is that of Prince Murād Baksh, and reads : *Nishān 'ālīshān Sultān Shāhzāda Murād Baksh*. The round seal to the right reads (from the bottom up) : *Murād Baksh ibn Shihābuddīn Muḥammad Ṣāhib Qirān Sānī Shāh Jahān Bādshāh Ghāzī san 10 ? ?, the last two digits of the year being illegible.*

The smaller *tughrā* in C has not been completely deciphered, but it is clearly that of Prince Aurangzib. The pear-shaped seal to the right is read by Mr. C. N. Seddon as a couplet :—

*Az 'ināyāt-i khudā Aurangzib andar jahān
Hast farzand ū murid-i sānī Ṣāhib Qirān.*

¹ See the index entries in the first twelve volumes of *The English Factories in India* (Oxford, 1906-1927).

Turning now from form to substance, it will be seen that these documents relate only to the southern provinces of the empire, and to functionaries described as *desmukh*; but the equation of this term to *chaudhrī* in the *Āīn* justifies the inference that the Mogul administration regarded the *desmukh* in the south as equivalent to the *chaudhrī* in the north, and the stock phrases which recur in the documents may reasonably be taken as applying to pargana headmen throughout the empire. On this view we may describe the headman's position, emoluments, and obligations as follows.

Position.—Four of the five documents (B, C, D, E) recognize implicitly that the position was hereditary, and two of them (B, E) show that under the Hindu law of inheritance it might be held jointly by co-heirs, but in one of these (B) Shāh Jahān ruled that adoption gave no title to succeed. Succession was not, however, automatic, for a claimant had to secure recognition by the authorities, and three of the documents (B, C, E) mention an engagement ('ahd, ta'ahhud), which was presumably a written undertaking. The charge was not invariable, for document E recites that an assignee had partitioned a pargana among the joint holders, and confirms the separate charge given to one of them.

Emoluments.—On recognition the headman became entitled to remuneration in two forms. First, there was a grant of land free of revenue, which was described as *in'ām*. Document A shows that this could be increased by the authorities, and the general practice of the empire suggests that it could also be diminished. The word *in'ām* however, covered allowances in cash as well as grants of land, and a document in the possession of Sir Richard Burn shows that in the reign of Aurangzib the *chaudhrī* of Sandila in Oudh was allowed Rs. 500 as a deduction from the land-revenue due from him, that this allowance was reduced to Rs. 200, and that later on it was restored to the original figure. We may take it then that the *chaudhrī* was dependent on the officials for this part of his remuneration. The other part consisted of fees.

The documents do not show the amount of these fees, or who paid them, but the phrase “according to the ancient practice (*m'amūl-i qadīm*) of the pargana”, which occurs in C and E, suggests that practice may have varied with the locality, while the prohibition of innovations and exactions (C, D, E) indicates that there was a natural tendency to increase these customary demands.

Against this remuneration must be set a possible liability to pay a gift (*peshkash*) into the treasury. This liability is mentioned only in document E, which recites that the *desmukh* who desired formal confirmation of the partition of the charge had bound himself to pay Rs. 2,000 in addition to the existing *peshkash*, and it requires him to pay into the provincial treasury not only that sum, but the *tatimma* of the former *peshkash*. The force of *tatimma* is uncertain, but the most probable meaning here seems to be “balance”, indicating that the former *peshkash* had not been paid in full. It is certain then that at this time liability to such payments existed in this particular pargana, but the evidence does not suffice to establish its generality, and the conjecture may be hazarded that this document reflects the financial stringency characteristic of the later days of the empire. The partition which was confirmed dated from the reign of Jahāngīr, for Khān Khānān 'Abdurrahīm, who made it, died in 1626-7; the fact that, nearly a century later, it was confirmed in return for a substantial payment suggests that some keen-eyed official had detected the irregularity which had passed unnoticed for so long, and had taken the opportunity to levy something for the treasury. On this view, there would not be justification for inferring that substantial gifts were part of the regular system, though doubtless formal presents (*nazr*) were made periodically.

Obligations.—The primary obligation was loyalty (*daulat-khwāhī*). Apart from it we have reference to various functions, some of them executive, the others concerned more specifically with the land-revenue.

The executive functions were twofold, extension of cultivation, and protection and encouragement of the peasants. Stress is laid on the first of these in all the four documents which refer to functions ; and, seeing that the village headman was held responsible for extension within the village, we may infer that the *chaudhrī* was expected to operate over a wider area, and distribute the peasants of his pargana, besides attracting peasants from outside, so that the waste land might be rendered productive. Encouragement and protection of peasants likewise appears in all the documents, though in varying phrases ; and in one case (D) we find the additional duty of dealing effectively with bad characters (*mufsidān wa mutamarridān*). The *chaudhrī* thus stands out as an important agent in securing an approach to the Mogul ideal of an empire fully cultivated by a contented peasantry protected from evil-doers.

On the other hand, there are no general orders regarding the *chaudhrī*'s revenue duties. One document (B) reminds him of his functions in regard to the collection of the land-revenue, but does not say what he had to do ; and another (E) requires him to see that no item of revenue remains concealed. We may reasonably assume that these injunctions are general, and that the *chaudhrī* was expected to assist with his local knowledge the salaried revenue staff. There is only one reference to anything that can be called clerical work ; in E the *chaudhrī* of a portion of pargana Pāthrī was required to file annually the *tagṣīm-i manfi* or “apportionment of profits” of the villages in his charge. The name of this record has not been found elsewhere, and its nature is matter for conjecture ; the most probable view is that we have here the Persian term for the annual estimate of the revenue due from a pargana, which was usually known by its Hindī name, *daul*.

It is not easy to bring the *chaudhrī* of Mogul times into relation with the shadowy figure we meet in the earliest

British records, and in order to do so we must assume that his position was materially affected by the anarchy of the eighteenth century, when a strong *chaudhri* would naturally emerge as a *talugdār* (in the contemporary sense), and the weak ones would atrophy. In Bengal, the Amini Report of 1778 described the *chaudhri* as merely a smaller *zamīndār* (in the Bengal sense of the word). In Benares, Jonathan Duncan wrote of the *chaudhris* in 1788 as "a kind of revenue officers somewhat similar to the canoongoes", and as being "in a most forlorn condition, having for many years past had little more than a nominal official authority, and many of them had no settled allowances whatever". Duncan assigned them no place in his general scheme of administration, but one case is recorded where a *chaudhri's daul*, or estimate of the revenue, was used as a check on the *qānūngō*. The early records of the Ceded and Conquered Provinces show only that *chaudhris* were known, and had in some cases set up as *talugdārs*, but here, too, no use was made of them in the administration. In the Delhi territory the position was similar. In the rest of the Punjab the *chaudhri* appears to have functioned as a collector of revenue under the Sikh government, but he was practically ignored by the early British administration, though something like him was subsequently re-created in the person of the *zaildār*.¹

The fullest account of the *chaudhri's* position just before annexation is contained in the reconstruction of the administration of Oudh offered by Mr. (later Sir Charles) Elliott in

¹ The authorities on which this paragraph is based are as follows. For Bengal, the Amini Report, pp. 103–110, as reproduced in R. B. Ramsbotham's *Studies in the Land Revenue History of Bengal* (Oxford, 1926). For Benares, *Selections from the Duncan Records* (Benares, 1873), especially p. 41 and Appendix xxix. For the Ceded and Conquered Provinces, *Selections from the Revenue Records of the North-West Provinces, 1818–1820* (Calcutta, 1866) and 1822–1833 (Allahabad, 1872). For Delhi, *Records of the Delhi Residency and Agency* (Lahore, 1911). For the Punjab, R. Cust, *Revenue Manual* (Lahore, 1866), p. 62; and H. K. Trevaskis, *The Land of the Five Rivers* (Oxford, 1928), pp. 180, 257.

chapter v of the *Chronicles of Oonao* (Allahabad, 1862).¹ "No material differences existed between the work done by the *qānūngō* and *chaudhrī*, but the former appointment was always held by one of the *kāyasth* class, the latter was generally given to the chief *zamīndār* of the pargana. Occasionally, where there were rival *zamīndārs*, the appointment was used to give political influence to a Muhammadan over a Hindu, or a subservient man over one more independent, but as a general rule the most important and respectable families in each pargana seem to have held it. There is no instance in the Unaо district where the title has been taken from one family and given to another . . . There can be no doubt that the original² intention of the double appointments was that one should be a check on the other . . . In the course of time the *qānūngos*, taking advantage of their opportunities for cajoling or frightening the villagers, and supported by the *Āmil's* [Collector's] influence, managed to become landholders themselves, and thus they broke down the separation which existed between them and the *chaudhrīs*. The latter, at the same time, not being bred to the study of accounts, as the *qānūngos* were, and taking greater interest in their work as landowners than as Government officials, gradually dropped their attendance at the *Āmil's* court, and left the *qānūngos* in undisputed authority . . .

"The duties of the *qānūngō* and *chaudhrī* lay entirely on the revenue side, and almost all work of this kind passed through their hands. They may be said to have been the Settlement Officers for the pargana, for every year they laid before the *Āmil* the *daul* or taxation register in which they recorded the sum which in their opinion each landowner ought to pay. This register was generally accepted without demur, but if the *Āmil* insisted on a higher total of revenue,

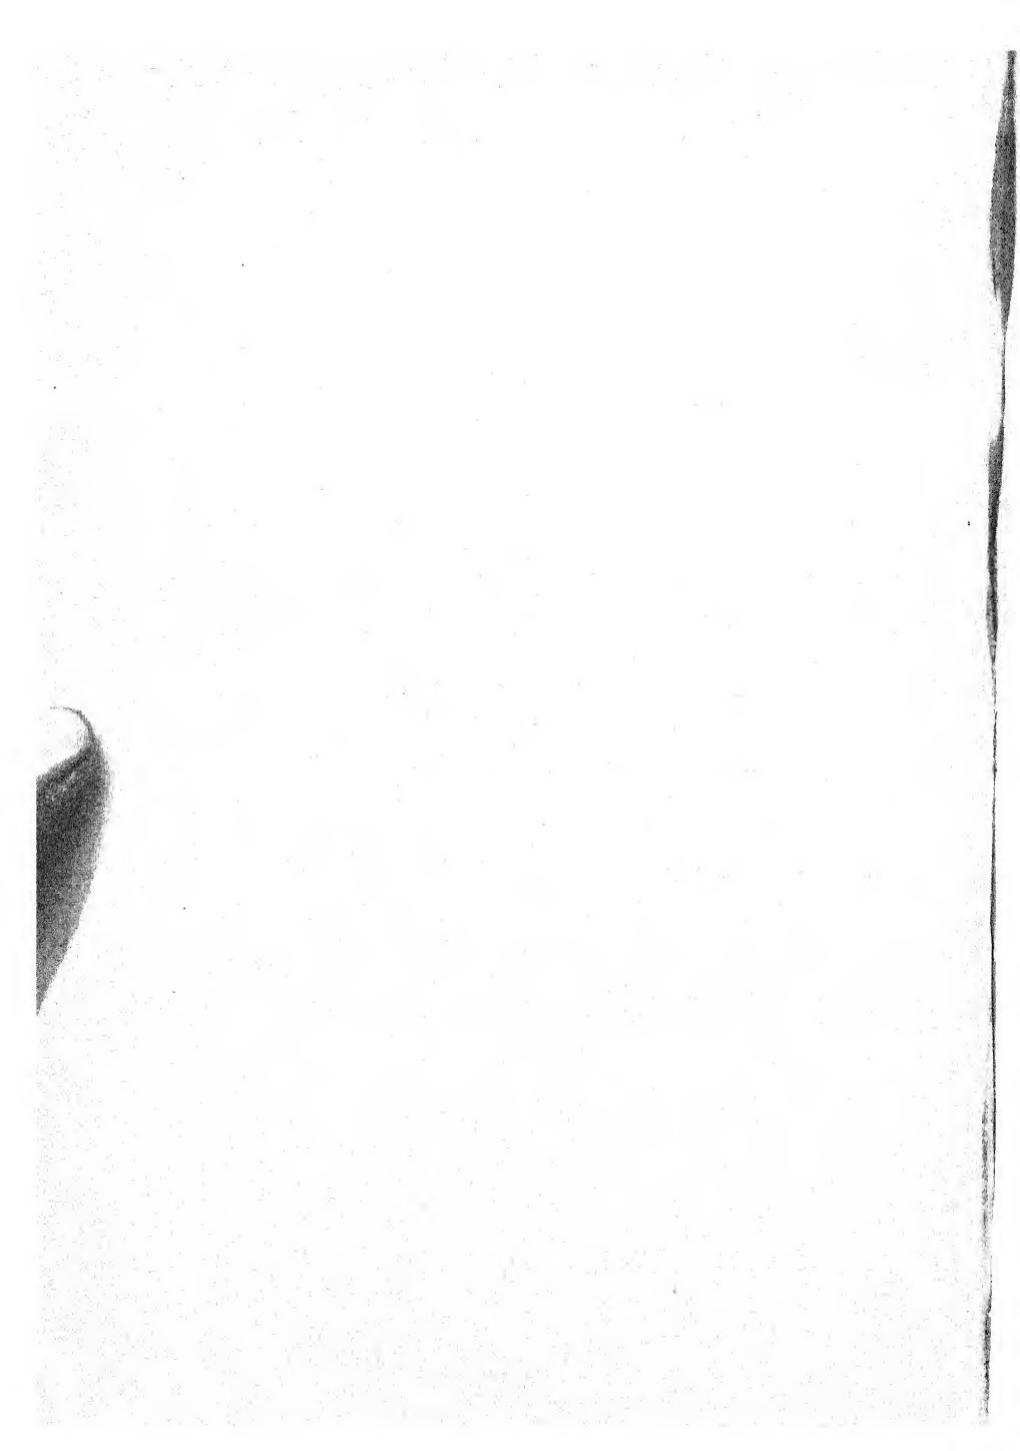

¹ The quotations are from pp. 112, 113. I have modernized the spelling of Indian words.

² The word "original" is, I think, incorrect. Originally the two offices were complementary, one executive and the other clerical; and the assimilation of their positions described by Elliott is a later stage.

it then fell to these officials to distribute to each village its quota of the whole. They also, assisted by some clerks in the *Āmil's* office, kept the accounts of collection, reported any default or evasion of payment, and superintended the carrying out of the *Āmil's* orders respecting distress or any other mode of recovering the balance due. They investigated the claims to succession of the heirs of a landowner, and their yearly books were the sole records of past possession and of former collections, from which there was no appeal."

It will be gathered from what has been said above that while the executive functions of the *chaudhrī* had disappeared, his connection with the revenue had for a time been emphasized, for Duncan's employment of a *chaudhrī's* figures to check those of the *qānūngō* squares with the position which had developed in Oudh. A probable explanation of this development is the change in methods of assessment which took place in the seventeenth century. Akbar assessed each peasant separately, and then the *qānūngō*'s importance was not great; but after the change to assessment on the village as a unit, his records of the past and present condition of each village in his pargana became indispensable to the assessors, and it is easy to suppose, though precise evidence is wanting, that he was considered to be too powerful, and that the *chaudhrī* was required to furnish independent information, so that each might be a check on the other. The paucity of English references, however, must be taken to show that the men of the pen more than held their own against the executive functionaries.

In conclusion, I have to acknowledge the generous help I have received from Sir Richard Burn, Professor Margoliouth, and Dr. A. J. Arberry in deciphering the *tughrās* on these documents, which, as the specimens reproduced in the Plate will show, are entirely beyond the scope of the ordinary reader.

The Date of the Hsia Calendar *Hsia Hsiao Chêng*

By HERBERT CHATLEY, D.Sc.

IN a well-known collection of ritual notes, the *Ta Tai Li* 大戴禮 (*The Rites of the Elder Tai*), considered to be earlier than the Han period (206 B.C.), there is a calendar section (No. 47), termed *Hsia Hsiao Chêng* 夏小正 (*The Lesser Canon of the Hsia*), which is traditionally regarded as a true relic of the Hsia dynasty (about 2000 B.C.). It was translated by Professor R. K. Douglas (*Orientalia Antiqua*, 1882) and was regarded by him and some other students as of great antiquity. On the other hand, it is very difficult to understand, in the light of modern discoveries as to the Shang culture (*circa* 1200 B.C.), how such a document could have been produced in 2000 B.C., and the more conservative students are unwilling to admit that it can be much older than, say, 500 B.C.

The document is practically a farmer's calendar, but it includes comments on weather, the stars, animal and vegetable life, all arranged under the twelve moons of the year. The style is very terse, but includes explanatory remarks which seem to indicate that it has absorbed a brief commentary into the text.

It is the object of the following notes to discuss the astronomical content of this calendar and hence the date of its composition. The latter can be deduced to a certain extent by the shift of the star positions at a given time of day on a given day of the year, due to the precession of the equinoxes resulting from the earth's third rotation (about the axis of the ecliptic once in 26,000 years).

The botanical and zoological matters it contains (e.g. in the eleventh moon the words "stags' antlers fall") cannot, of course, serve to date it, but do fix the position of its months in the tropical or climatic year. There is, however, no doubt

about the latter from an astronomical point of view. Although the calendar refers to "moons" 月 (the customary Chinese civil reckoning being by lunations) it is definitely a tropical one with the winter solstice (23rd December, Gregorian style) in the eleventh moon. Hence a reference to a particular moon must only be taken as relating to the average position of that lunation in the tropical year, maintained by the intercalation every two or three years of an extra moon. Since a "moon" is slightly over $29\frac{1}{2}$ days and a "month" is slightly over $30\frac{1}{2}$ days, in any one particular year a particular moon may shift backwards or forwards from the average position by an amount less than fifteen days. This would seem to introduce an uncertainty of over 1,000 years in the precessional dating, but it seems clear that the calendar refers definitely to the average position, and hence for the purpose of comparison it is not necessary to consider the lunation as distinguished from one-twelfth of the tropical year.

The essential arrangement of the Hsia calendar, which was officially adopted for civil reckonings in 104 B.C. in the Han dynasty and remained (with short interruptions) in use as a standard in China until A.D. 1927, was that the first, fourth, seventh, and tenth moons should inaugurate the four seasons and that the second, fifth, eighth, and eleventh moons should contain (more or less centrally) the equinoxes and solstices. It should be remarked that what the Greek and modern astronomers consider the beginnings of the four seasons the Chinese consider the middles, e.g. the Chinese consider that spring commences halfway between the winter solstice (23rd December) and the vernal equinox (21st March), i.e. on 4th or 5th February,¹ and not at the vernal equinox.

Given this system, the dates in the year and the times of dawn and dusk, in latitude 35 degrees north (Hsi-an, Lo-yang, and K'ai-fêng all lie near this latitude), during the Hsia year are as follows:—

¹ Two days later if the sun's motion is assumed to be uniform, as was thought to be the case in Han times.

Moon.	"Normal" beginning.	Dawn. a.m.	Dusk. p.m.
	hr. min.	hr. min.	hr. min.
First	5th February	5 18	6 42
Second	6th March	4 48	7 12
(Vernal Equinox)	21st March	4 45	7 15
Third	6th April	4 02	7 58
Fourth	6th May	3 32	8 28
Fifth	7th June	3 02	8 58
(Summer Solstice)	22nd June	2 58	9 02
Sixth	8th July	3 02	8 58
Seventh	8th August	3 32	8 28
Eighth	8th September	4 02	7 58
(Autumnal Equinox)	23rd September	4 45	7 15
Ninth	9th October	4 48	7 12
Tenth	8th November	5 18	6 42
Eleventh	8th December	5 31	6 29
(Winter Solstice)	23rd December	5 34	6 26
Twelfth	6th January	5 31	6 29

These times are "apparent", not "mean" time, which introduces another uncertainty averaging about plus or minus six minutes (say 200 years of precessional time), and are given by Chinese observers as those at which the stars cease to be or become visible.

THE TEXT

The text of the *Hsia Hsiao Chêng*, as far as astronomical references only are concerned, is as follows:—

"First Moon.

"Chü 鞠 then appears. What is Chü? Chü is a star name. 'Chü then appears' means that in the year it has again appeared.

"In the beginning [of the month] at dusk Shên 参 (Orion) is in the middle (South), then recording the season.

"The Tail of the Dipper hangs down below. The saying 'Tail of the Dipper' therefore shows Ts'an in the middle."

The commentators suggest that the lunar asterism Liu 柳 (δ to ω Hydriæ) is equivalent to Chü; Liu rises when Orion is in the South.

Taking dusk at 6.42 p.m., it will be found that Orion souths now (say A.D. 1900 for simplicity) about 6th March. Owing to precession the date of southing of a star at a fixed

time of day advances one month in about 2,250 years, so that this corresponds for 5th February to about 350 B.C., with a possible error of plus or minus about 150 years.

(Note.—The precessional motion in celestial longitude along the ecliptic is 30 degrees in 2,160 years. If the star position happens to be close to an equinox this corresponds to $27\frac{1}{2}$ degrees of right ascension, or 30 degrees of right ascension in 2,350 years. For positions near the solstices the angular movements in longitude and right ascension are in reverse ratio, the true average being 30 degrees of right ascension in 2,160 years. It so happens that most of the data are near the equinoxes and one month shift has been taken as 2,250 years for simplicity. No precision is possible.)

When the Tail of the Dipper (Ursa Major) hangs vertically in the north-east, Orion is in the south, as stated.

“Second Moon.”

(Nil.)

“Third Moon.”

“Stars without season and do not appear.”

This suggests that there are no particular stars to indicate this month.

“Fourth Moon.”

“Mao 昴 (Pleiades) then appears.

“In the beginning [of the month] at dusk Nan Mên 南門 (Centaurus) is exact. Nan Mên is a star that in the year again appears.”

The Pleiades in Latitude 35° N. rise at 3.32 a.m. now early in June corresponding to early May some 2,250 years ago.

Nan Mên (α and β Centauri) lie far south and are only visible for part of the year in latitude 35° North. The group is almost exactly south of Arcturus (α Boötis), which souths now at 8.28 p.m. early in June, or about one month later than the fourth moon day of 6th May, corresponding again to some 2,250 years ago.

“Fifth Moon.”

“In the beginning [of the month] at dusk Ta Huo 大火 is

in the middle (South). Ta Huo is Hsin 心 (one of the twenty-eight Lunar Mansions including σ , α , and τ Scorpii). Hsin is in the middle."

At 8.58 p.m. Antares (α Scorpii) souths now on 12th July, or one month and five days later than 7th June, corresponding to about 2,600 years ago, or say 700 b.c. This is the earliest indication found, but if Ta Huo corresponds to Hsin and Fang 房 (β to ν Scorpii) the southing of the whole group is 7th July, reducing the interval once again to the same 2,250 years. Ta Huo is the second of the Jovian duodecimal divisions of the Chinese equatorial planet belt, and includes as such the three lunar asterisms Ti 氐, Fang, and Hsin with Fang in its centre, not Hsin. (Ti is from α to ι Librae.)

Huo ("Fire") is one of the cardinal star points in the *Yao Tien 堯典* (*Canon of Yao*) in the Chinese *Shu Ching* (*Book of History*), referred to in the appendix. Hsin ("Heart") alludes to the heart of the Green Dragon, a name given to the eastern quadrant of the equatorial band, the time being midnight at the winter solstice. "Ta Huo is Hsin" looks like a comment added to the text.

"Sixth Moon.

"At the beginning [of the month] at dusk the Tail of the Dipper is exactly upright.

"In the fifth moon Ta Huo was in the middle (South). In the sixth moon the Tail of the Dipper is exactly upright. Use this to compare the appearance. If the tail does not agree with Hsin it then conforms to I 依. I is Wei 尾 (the Tail of the Dragon, ϵ to λ Scorpii)."

This cannot be controlled at all exactly. The Tail of the Great Bear at 8.58 p.m. is perpendicular (upwards) to the horizon at about the beginning of August now (in lat. 35 N.) and therefore early in July 2,250 years ago. Wei souths at 8.58 p.m. now about 25th July, which is too early. The text seems to indicate that Wei gives an intermediate indication. The remark "I is Wei" again looks like an added comment.

Rather remarkably in the *Yüeh Ling*, or calendar section of the *Li Chi* (*Ritual Records*), the dusk culmination of Huo is put in the sixth moon which is practically its position at the present time. There must be an error in the *Yüeh Ling*, which agrees with the document under discussion in putting the culmination of Orion at dusk in the first moon. The *Yüeh Ling* is generally considered to be a compilation of the third century B.C.

“Seventh Moon.

“In the beginning [of the month] at dusk Chih Nü 織女 (‘The Weaving Girl,’ ε and α Lyrae) is exactly east directed.

“The Tail of the Dipper hangs below and then it is dawn.”

At 8.28 p.m. Vega (α Lyrae) is almost overhead in early September with the line of the two stars towards the east, and would have been so one month earlier 2,250 years ago, but this is a very rough indication. Similarly, the Tail of the Great Bear hangs perpendicular to the horizon before dawn at 3.32 a.m. early in September, and would have been so at dawn in August 2,250 years ago.

“Eighth Moon.

“The Ch’ēn 辰 (conjunction point, probably Hsin and Fang, equal to Scorpio) then declines. The Ch’ēn is a star. Declines means goes in and does not appear.”

This seems to allude to the fact that at 7.58 p.m. early (now) in October Scorpio sets, corresponding to dusk in early September 2,250 years ago.

The character *ch’ēn* 辰 is used in various ways, but one of its standard meanings is “conjunction point for the sun and moon” and the two important *ch’ēn* were Shēn (Orion) and Huo (Scorpio). Here again observe the comment.

“Ninth Moon.

“The Huo within, the Huo within. The Ta Huo, Ta Huo is Hsin.”

This simply seems to mean that Scorpio has set, which is a fact.

"Tenth Moon."

"Nan Mén appears. Nan Mén is a star. Reaching this (time) it again appears."

Nan Mén (Centaurus) is referred to in the fourth moon. Being so low its arc in the sky in latitude 35° N. is short and it will only be seen in the southern quarter. At 5.18 a.m. early in December it now rises and so (at dawn) in November 2,250 years ago.

"Eleventh Moon."

"The sun's Winter limit."

This is the only reference to the sun, but it quite definitely fixes the relation of the numbers of the moons to the seasons.

"Twelfth Moon."

(Nil.)

All the data are consistent with the astronomical conditions in about 350 B.C., which is the epoch at which Shih Shén 石申 and Kan Tê 卦德 first collected moderately exact data on astronomical matters.

It is also the time at which, in the West, Kidinnu and Naburiannu flourished and provided the Greeks with the data which were so powerfully developed by Eudoxos and Hipparchos. The Chinese were much behind the Seleucid Babylonians in their grasp of astronomy, and did not master the oblique motion of the planets until the second century A.D.

No attempt has been made to deduce any exact date by refinement of the calculations since the data and times do not warrant it. Similarly only rough allowance has been made for the differences between celestial longitude and right ascensions which are of smaller order than the degree of approximation in the day of the year and the time of day.

On account of this roughness of the data, the date *might* be pushed back to say 700 B.C., or conversely could be drawn down almost to the early Han period (206 B.C.), although the latter is not probable because of the much superior data given in the *Shih Chi* (*Historical Records*) of Ssü-ma Ch'ien (*circa*

100 B.C.) and in the *Ch'ien Han Shu Lü Li Chih* 前漢書津曆志 (*Treatise on Metrology and the Calendar* in the *Former Han History*, composed early in the first century of the Christian era).

In any case this calendar cannot be of the Hsia period (traditional date, now known to be erroneous, 2205–1766 B.C.; possible date 2000–1500 B.C.), since this is far beyond the limits of error in the precessional calculations given above.

The astronomical content of the calendar differs very much in style from the allegedly very early *Yao Tien* in the *Book of History*, and also from the very systematic *Yieh Ling*. Emphasis is placed on the three great star groups which we call Orion, Scorpio, and the Great Bear, rather than on the twenty-eight asterisms only a few of which occur, rather casually and in some cases under names which are different from those current in the Han books. If this document is, as it appears, later than 700 B.C., the formal arrangement and names of the twenty-eight asterisms would seem to be of still later date and the rather precise system of the four quarter stars in the *Yao Tien*, which is the basis of the reputed great antiquity of that calendar, becomes still more surprising.

APPENDIX

The Riddle of the Yao Tien Calendar

It requires extreme temerity to refer to the much discussed antiquity of the *Yao Tien* calendar, upon which the Hsia calendar is traditionally based. All the modern sinological evidence seems to be against it really representing a record dating back to 2400 B.C., and yet the astronomical evidence seems to point that way. De Saussure devoted over twenty-five years to its study and his main arguments are very hard to overthrow.

Stripped of all detail, the *Yao* calendar asserts that the equinoxes and solstices are marked by four stars:—

(21st March)	Spring Equinox	by Niao 鳥 “The Bird”
(22nd June)	Summer Solstice	Huo 火 “Fire”

(23rd September) Autumn Equinox	Hsü 虛 "Void"
(23rd December) Winter Solstice	Mao 昴 "Pleiades" or "Sun Gate"

Whatever the original document may have meant, it is certain that in Han times these four were identified with the four lunar asterisms :—

Ch'i Hsing 七星 ("Seven Stars")	α to ν Hydrael
Hsin 心 ("Heart")	σ to τ Scorpis
Hsü 虛 ("Void")	β Aquarii and α Equulei
Mao 昴 ("Pleiades")	η Tauri and surrounding stars

and it is a fact that these four star groups coincided (within a very few degrees) with the solstices and equinoxes about 4,320 years ago and culminated at 6 p.m. mean time on the days stated. Excepting the winter one, however, these culminations (southings) would not be visible, and in the case of the winter solstice some form of timekeeper would have been necessary to fix the time. De Saussure has argued that these positions were deduced from the location of the full moon amongst the stars. There is no doubt that such a method might have been used, and there is also no doubt that the whole very elaborate symmetry of the Chinese subdivision of the celestial equatorial band and its relation to the day and year, as it appears in the Han records, does presuppose these four in the alleged quadrantal positions. This system predates any *exact* estimate of the precession of the equinoxes by which alone the positions in 2400 B.C. might have been computed. The date of Yao was given by Mencius (*circa* 300 B.C.) as about 2100 B.C., and the origin of the calendar was attributed popularly in Han times to Huang Ti, who is put three or four hundred years before Yao, i.e. to 2400 B.C.

Two of the four star names are vague. Niao "the Bird" (the Vermilion Bird of the Southern Quadrant) includes in its widest sense seven of the asterisms (Tung Ching or μ Geminorum to Chen 軫 or γ Corvi) and so

allows a wide uncertainty (90 degrees or 6,480 years of precessional time).

Huo ("Fire") is one of the duodecimal divisions of the equator, representing the annual displacement of the planet Jupiter, called Ta Huo ("Great Fire"), and includes three of the asterisms (Ti to Hsin, covering the constellations Libra and Scorpio), allowing an uncertainty of 30 degrees or say 2,250 years, being near to an equinox.

Hsü and Mao, on the other hand, are single asterisms of small range in longitude (about 8 degrees), which only allows an uncertainty of about 600 years.

Schlegel and de Saussure both vigorously combat the idea that dusk culminations could have decided the matter.

Hsü culminates now (1900 for simplicity) at 7.15 p.m. on the 23rd October, just one month after the autumn equinox, which corresponds to 2,250 years ago or say 350 B.C., which would conform to a late date for the *Yao Tien*, but Mao will not fit this at all.

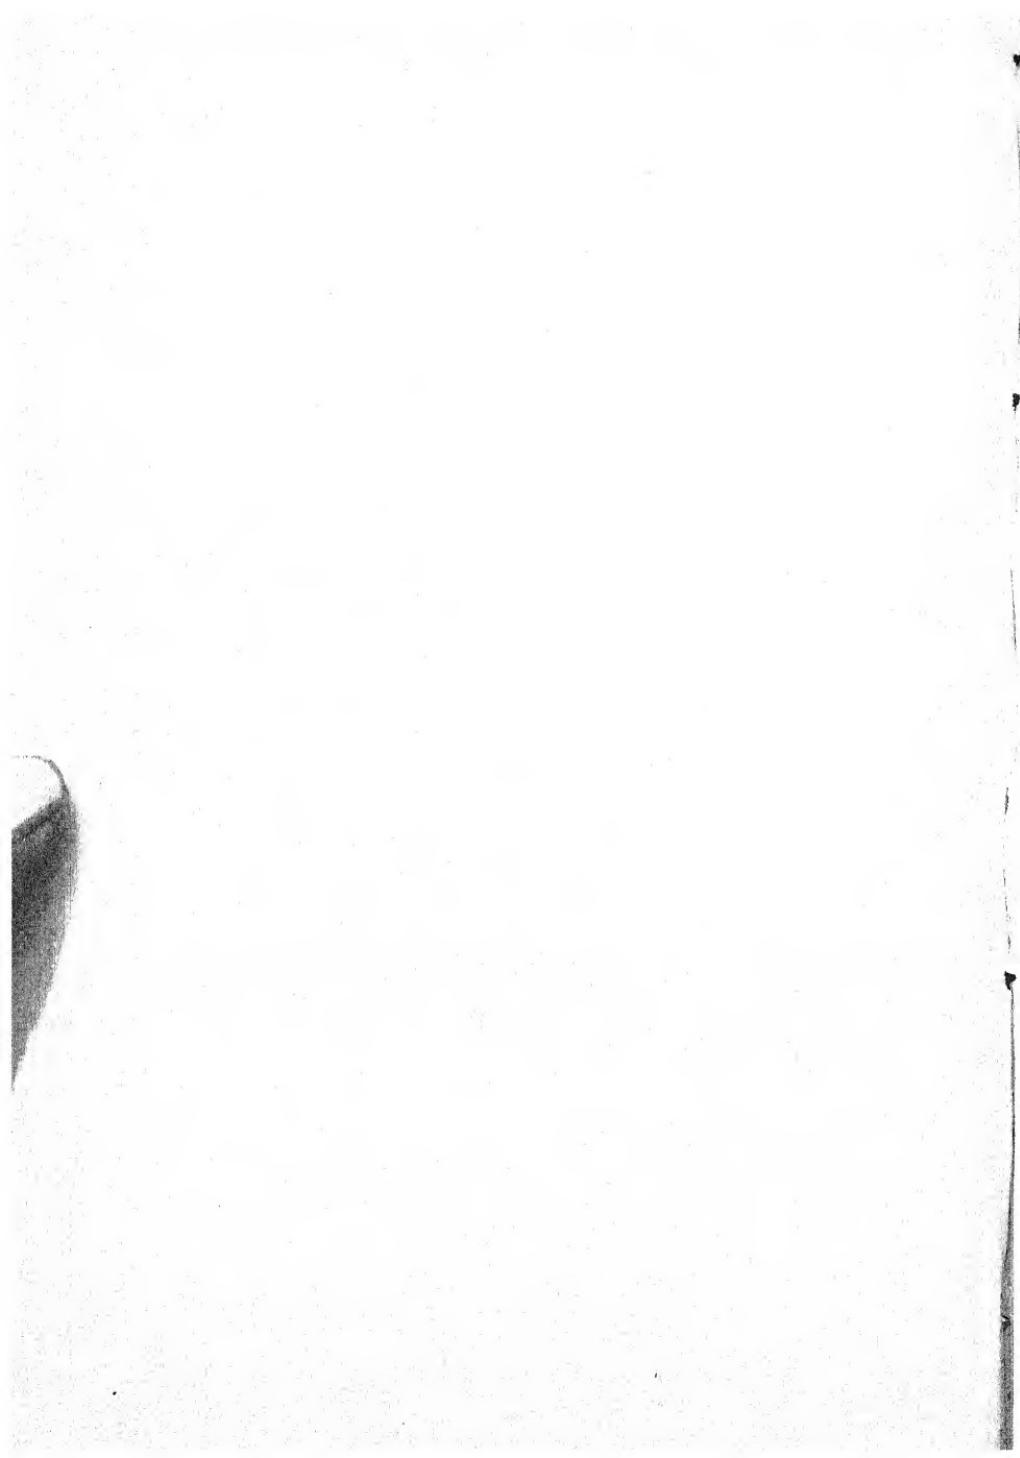

Mao culminates at winter solstice dusk (6.26 p.m.) now on the 9th February, which is one and a half months after the winter solstice, corresponding to about 3,300 years ago, or 1400 B.C. This is the latest date if the dusk culminations are used, and Hsü fits this very badly indeed. The difference between these two is the first main discrepancy in the case against the quadrantial positions and the consequently implied 2400 B.C. date.

As to Huo, at 9.02 p.m. (summer solstice dusk), using the full extent of the three asterisms, dusk culmination now can occur at any date from 17th June to 15th July. Even the latest of these days is not late enough to make the date of composition later than A.D. 100, which is quite impossible. This is the second discrepancy.

Thus the case for the great antiquity of the astronomical content of the *Yao Tien* is vastly stronger than it is for that of the *Hsia Hsiao Chêng*. H. Maspéro has developed a very interesting theory that the *Yao Tien* text includes an

euhemerized myth of a Sun-goddess Hsi-Ho 羲和, which is quite plausible, but he has not ventured to disturb de Saussure's main argument, and there is no necessary inconsistency in a myth containing a genuine astronomical tradition.

379.

The Image of Buddha in the Jo-wo-Khang Temple at Lhasa

By E. H. C. WALSH

(PLATES VI AND VII)

THE image of the Buddha which is the most widely renowned and the most revered by Buddhists throughout Tibet and Central Asia is the image in the Jo-wo-Khang, the Great Temple at Lhasa.¹ This image has been mentioned by many writers. Sarat Chandra Das¹ says, "The image is exquisitely modelled and represents a handsome young prince. The Kunyer said that the image represented the Buddha when at the age of twelve, hence the princely apparel in which he is clothed and the dissimilarity of the image to those seen elsewhere."² The Japanese monk Ekai Kawaguchi³ also refers to the image, but does not describe it. But, until Sir Francis Younghusband's Mission reached Lhasa in 1904, it had not been described in detail by anyone who had seen it. It was then seen by certain of the officers on the Expedition, and has been described by Colonel L. A. Waddell, who was with the Mission as Principal Medical Officer, in his Book *Lhasa and its Mysteries* (1905), and by the late Mr. Perceval Landon, who was with the Mission as the Correspondent of *The Times*, in his book *Lhasa* (1905). These two descriptions differ as regards every detail and cannot be reconciled.

Sir Charles Bell does not describe the image and only refers to it in reference to a bell which appears to have belonged to the former Jesuit or Capuchin Missions in Lhasa, which hangs in the passage leading to it.⁴

¹ Or the various celebrated images of Buddha, see *Land of the Lamas*, by W. W. Rockhill, p. 105, note 2.

² *Journey to Lhasa and Central Tibet*, by Sarat Chandra Das, C.I.E., 1902, pp. 151-2.

³ *Three Years in Tibet*, by Sramana Ekai Kawaguchi, 1909, p. 228.

⁴ *The Religion of Tibet*, by Sir Charles Bell, K.C.I.E., C.M.G., 1931, p. 152.

Sir Charles Bell has also told me that he saw the image several times during his year in Lhasa and stood close to it, and that the chain-curtain was up when he did so, but that he does not remember it well.

As the writer is the only person who has not only seen the image, but has also photographed it, it seems desirable that the photograph of the image should be placed on record.

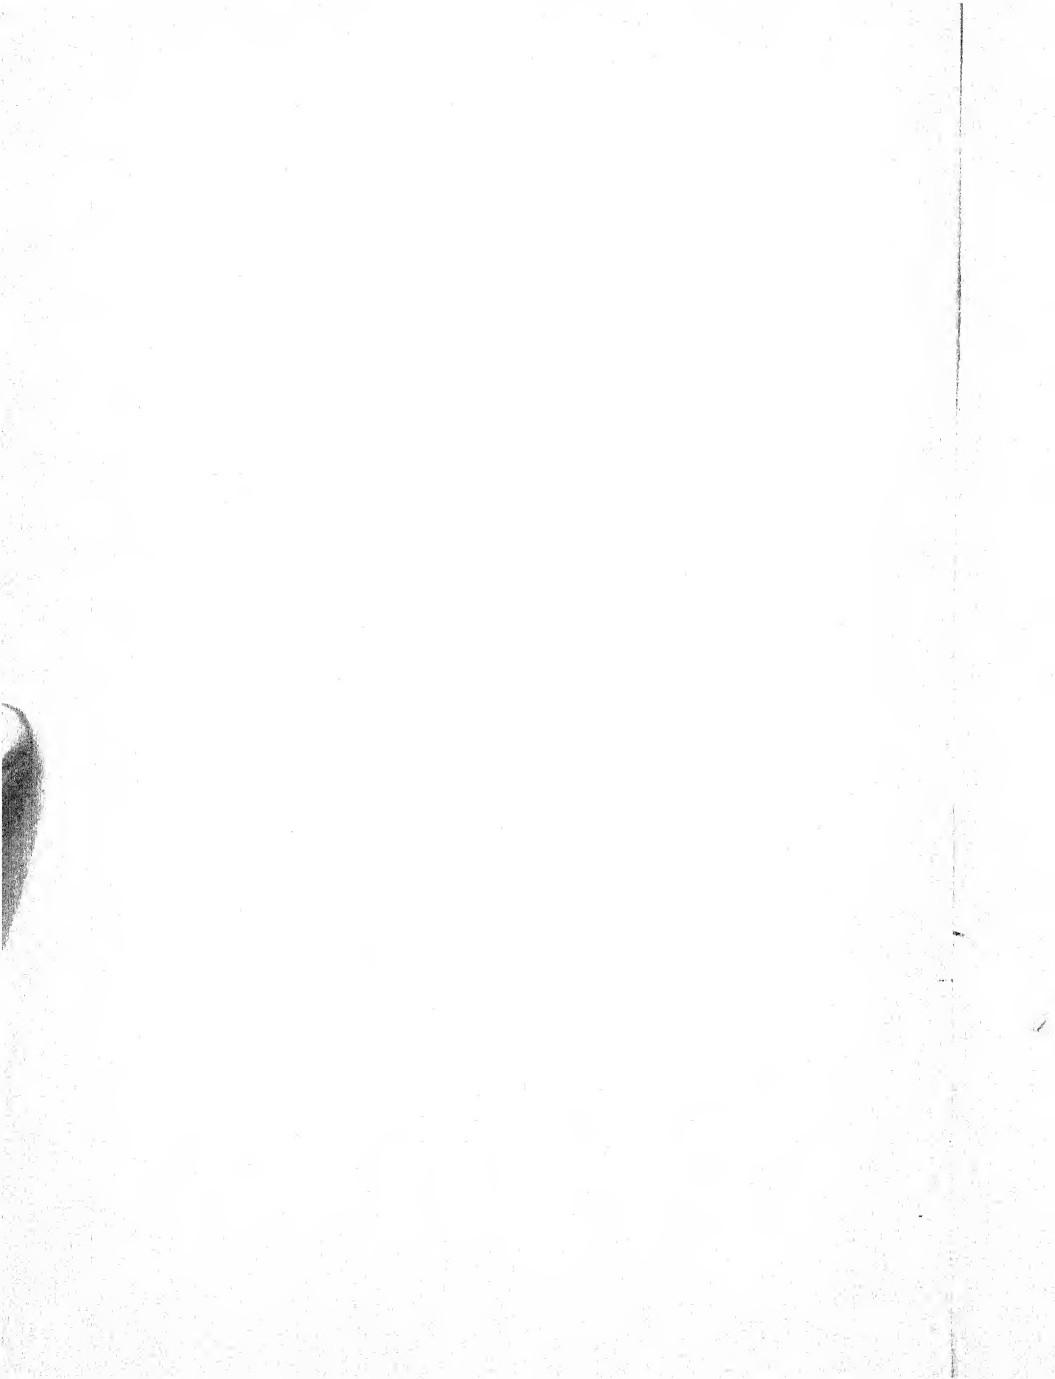

The image was brought from China in the seventh century, when Srongtsan Gyempo, the King of Tibet, invaded Western China, and in the terms of peace, was given the daughter of the Emperor of China in marriage. She was a Buddhist, as Buddhism had already been introduced into China, and she brought the image with her from China (as well as the silk-worm and the use of ink and the almanac). Srongtsan Gyempo also married a Nepalese princess who was a Buddhist. His two wives converted him to the Buddhist religion, and he introduced it into Tibet as the religion of the country, for which purpose he sent for Buddhist monks from India, who also gave Tibet its alphabet, based on the Northern Indian alphabet of that time, for the purpose of translating the Buddhist sacred books. He also built the Jo-wo-Khang ("The House of the Lord"), to enshrine the image, known as the "Jo-wo Rimpochke" ("The Precious Lord").

The image is in a shrine in the innermost part, "The Holy of Holies," of the Jo-wo-Khang Temple, and has an ambulatory round it, in which are a number of menacing guardian deities, guarding the shrine. The shrine is open on the front side only, and this is covered with a curtain of steel-mesh which is kept locked with several padlocks, the key of each of which is held by a different official, so that it can only be opened by them acting together. In front of it are a number of golden butter-lamps, the largest of which is about 2 feet in diameter. The light in the "Holy of Holies", and especially in the shrine itself, is dim, and the image only appears in the light of the butter-lamps, and, when the chain-curtain is down, can only be indistinctly made out behind it.

THE IMAGE OF BUDDHA
IN THE JO-WO KHANG TEMPLE AT LHASA.

[To face p. 536.]

The writer was taken over the Jo-wo-Khang by the Head Lama, and the chain-curtain was raised, as seen in the top right-hand corner of the photograph, for him to see the Image and to photograph it.

Colonel Waddell notes that the image is supposed to represent Buddha "when a youthful prince of sixteen in his home at Kapilavastu", and describes it as follows (*op. cit.*, p. 369) :—

"It is, however, a repellent image, about a man's size, seated with goggle eyes and coarse, sensual face, and is of very rude workmanship. So inferior is it to anything that I have seen in China, and so unlike in feature any type of Buddha's image there, that I doubt the story of its foreign origin. Nor does it resemble any Indian ones, nor have I seen anything so uncouth in Buddha's images in Burma, Ceylon, or Japan."

Colonel Waddell appends a footnote with reference to the image: "It is said by the Chinese to have been cast by a Chinaman from Tsolang (Rockhill, *loc. cit.*, p. 263); but the first Dalai Lama ascribed to it an Indian origin, in his guide-book."

Colonel Waddell did not see the image with the chain-curtain raised, and nothing is seen behind the curtain in his photo of the shrine (p. 368).

As will be seen from the present photograph, Colonel Waddell's description of the details of the shrine are correct. The writer, however, who examined the image carefully, did not consider it to be "coarse" or "sensual" or "like a foul felon in its prison, or a glaring demon in its web of chains". The mouth, as will be seen, is wide open and the lips are consequently shown distinctly, which may have given Colonel Waddell the impression of its being sensual, especially if not clearly seen through the chain-curtain. The butter-lamps being directly between the image and the spectator make a glare in front of it.

The writer's photograph was taken with a magnesium light,

which burnt for some time and made the image perfectly clear and distinct.

The writer also does not agree with Colonel Waddell as to the coarseness of the work on the golden butter-lamps. The carving and workmanship on them are delicate and fine, though their detail, and that on the front of the altar, does not show in the reproduction of the photograph on Plate VI.

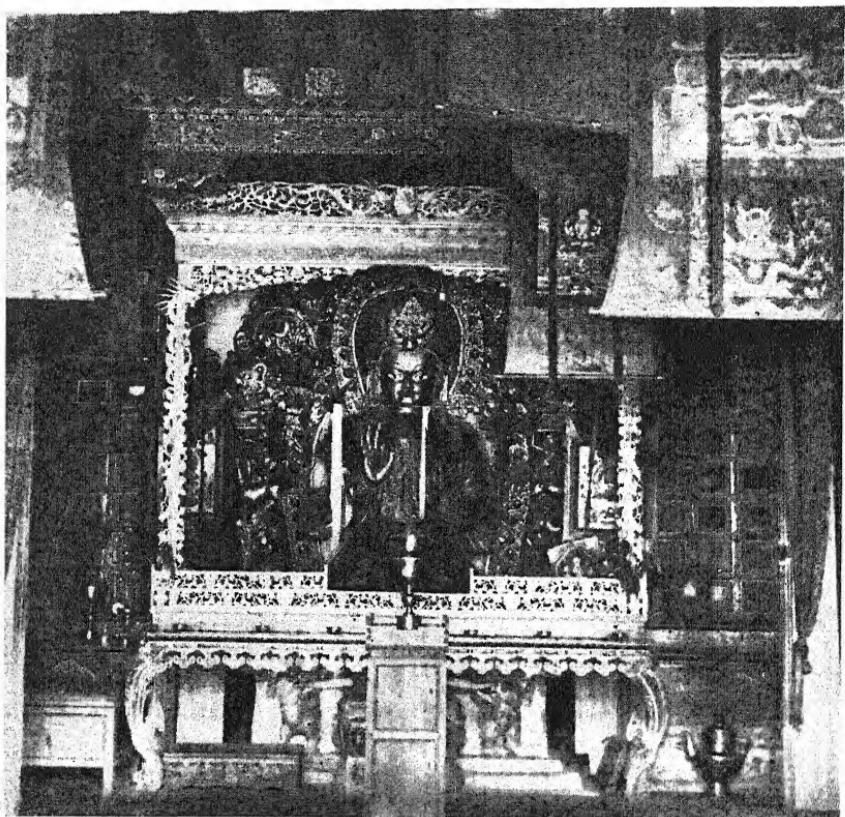

The image is more than life-size. There is a Tibetan ceremonial scarf (*kha-btags*) placed over the head-dress, which is seen hanging down on either side of it. The head-dress is said to have been given by the reformer Tsong-Khapa in the fifteenth century. The golden butter-lamps are on three shelves, each above and behind the other; the large one on the left in the top row is in the centre of the altar and is directly in front of the image. The two dragons, presented by an Emperor of China, which are curled round the pillars on either side supporting the canopy over the image, are of silver-gilt. They are about 10 feet in height. Gilded dragons of similar design are placed on either side of the images, as guardians, in the shrines of many other temples and in the private chapels in some houses in Tibet. The writer has taken a photograph of one such shrine in a private house at Sha-ri in the Chumbi Valley.

As mentioned by Colonel Waddell, Rockhill says of the image, "It was originally brought in the T'ang period, when the Imperial Princess came to Tibet. It represents the Buddha at the age of twelve. It is moreover said that it was cast by a Chinese from Tso-lang."¹ Sarat Chandra Das, however,² says (p. 151), "This famous image of Buddha, known as Jo-vo rinpoché, is said to have been made in Magadha during the lifetime of the great teacher.³ Visvakarma is supposed to have made it, under the guidance of the god Indra, of an

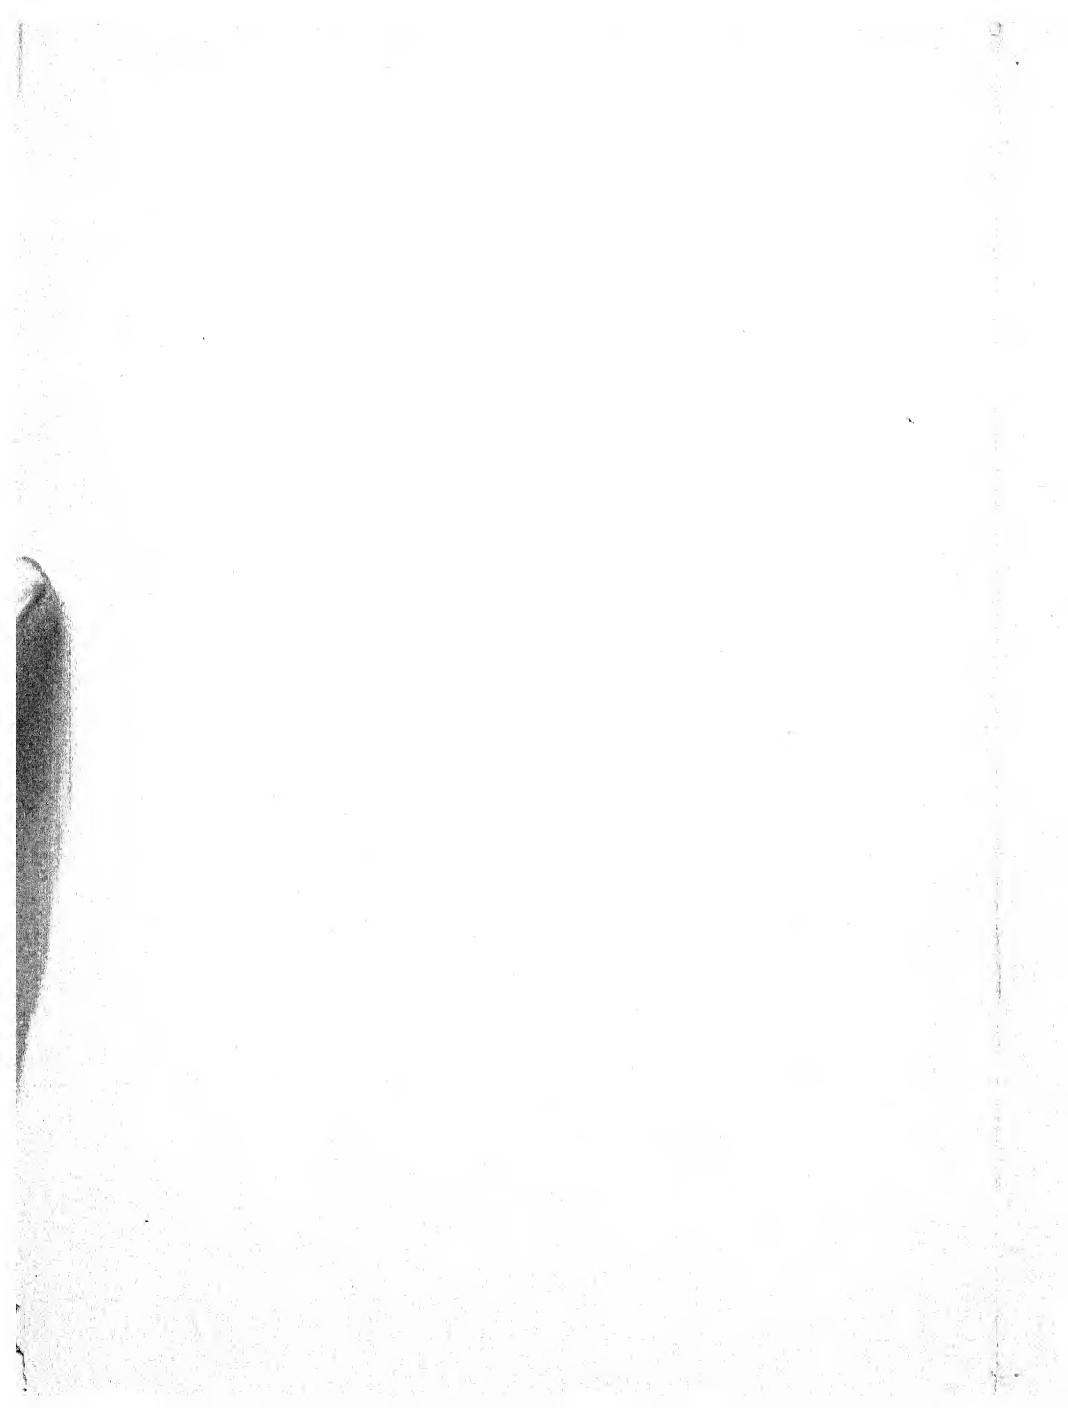

¹ "Tibet. A Geographical, Ethnological, and Historical Sketch derived from Chinese Sources," by W. W. Rockhill, *JRAS.*, 1891, pp. 1-133, and 185-291, p. 263.

² *Journey to Lhasa and Central Tibet*, by Sarat Chandra Das, C.I.E. Edited by W. W. Rockhill, 1902, p. 151.

³ See I. J. Schmidt, *Geschichte der Ost-Mongolen von Ssanang Ssetzen*.

THE IMAGE OF BUDDHA
IN THE DUNG-KAR MONASTERY.

alloy of the five precious substances, gold, silver, zinc, iron, and copper, and the 'five precious celestial substances' probably diamonds, rubies, lapis-lazuli, emeralds, and *indranīla*. The legend goes on to say that the image was in the first place sent from India to the capital of China in return for the assistance the Emperor had given the King of Magadha against the Yavanas from the west. When the Princess Konjo, daughter of the Emperor Tai-tsung, was given in marriage to the King of Tibet, she brought the image to Lhasa as a portion of her dowry."

There can be no doubt from the photograph that the image is Indian. The features are entirely different from Chinese Images of Buddha of that or other periods. Only the head and shoulders of the image can be seen, the lower part being hidden by the butter-lamps in front of it, and consequently the position of the arms and hands cannot be seen. But, from the open mouth, it appears to be Buddha preaching or expounding the Law.

In the Dung-kar Monastery above Galing-kha, which is the only monastery of the Geluk-pa sect in the Chumbi Valley, there is an image of Buddha which the Lamas claim to be the same as the image in the Jo-wo-Khang at Lhasa. The writer has taken a photograph of that image, which is shown for comparison in Plate VII. The mouth is open and, excluding the different head-dress, which in either case is not part of the image, the resemblance of the face to that of the Jo-wo-Khang Image is very striking, and bears out the claim of the Lamas. The position of the hands and the attitude (*mudrā*) of the right hand, with the thumb and forefinger joined and the other fingers raised, confirms the conclusion that the Jo-wo-Khang Image, also, is Buddha preaching.

Mr. Perceval Landon's description of the image (op. cit., vol. ii, p. 309) is diametrically opposed to that of Colonel Waddell. Mr. Landon saw the image with the chain-curtain raised. He describes the features as "smooth and almost childish".

As will be seen from the photograph, there is no special indication of youthfulness in the face of the image. The face is square and thickset, the neck thick and strong, and the shoulders broad. As already stated, the writer considers the image to be Buddha preaching, in spite of the tradition of its being Buddha as a youth.

Mr. Landon has given (p. 310) a pencil drawing of "The Head of the Great Golden Idol of Lhasa, from a rough sketch made on the spot". The drawing is incorrect in every detail and bears no resemblance to the image. The mouth is wide and the lips are closed; the eyes are narrow slits and point very obliquely upwards; and the ears have long lobes reaching down and touching the shoulders. As will be seen from the photograph, the mouth of the image is wide open; the eyes are full and round, and are horizontal; the ears are normal and the lobes are not elongated. The head-dress is also incorrectly shown in the form of a modern coronet.

On all the above-mentioned points, *Fiat justicia ruat cælum*—let the photograph decide.

Ibn al-Jauzi's Handbook on the Makkan Pilgrimage

By JOSEPH DE SOMOGYI

I

THE duty of the pilgrimage to the sanctuary of the Ka'ba (*hajj*), as imposed by *Qur'an* 3 : 91 on every Muslim, has been expounded in all the collections of traditions (*hadīth*) and all the textbooks of canonical law (*fiqh*). Historians dealt with the institution of the pilgrimage, and geographers described the sacred cities of Makka and Madīna as well as the surrounding country of al-Hijāz. The traditional and topical information about the pilgrimage had in time increased so much that in the sixth century A.H./twelfth century A.D. the celebrated Baghdād polyhistor Ibn al-Jauzi¹ could compile it in a medium-sized handbook.

This work, which has not yet been edited in print or reviewed, bears the title *Ta'rīkh al-khamīs al-musammā Muthīr al-'azm as-sākin ilā ashraf al-amākin* (A History in Five Parts, Named The Excitative of Firm Resolution for Visiting the Most Noble of Places). It is extant in the following manuscripts² : Berlin (Prussian State Library), Ahlwardt, No. 4042, and another copy registered in the hand-written inventory of later acquisitions under Oct. 1452 ; Oxford (Bodleian Library), Cat., vol. ii, pp. 129–130, under No. cxxxix; Damascus Z. 82 ('Um. 87), 46, where the title is *Muthīr al-gharām* ; Cairo, v, 322 ; Rāmpūr, ii, 323, 635, where the title is *Mushīr al-'azzām*. Excerpts from the work were given by J. Gagnier, *La vie de Mahomet, traduite de l'Alcoran*, Amsterdam, 1732, 2 vols., in vol. ii, p. 230.³

¹ For the author and his principal work see my paper the *Kitāb al-muntazam* of Ibn al-Jauzi, *JRAS.*, 1932, pp. 49–76.

² See Ch. Brockelmann, *Geschichte der arabischen Literatur*, vol. i, pp. 505–6, and *Supplement zum Bd.* i, p. 920.

³ The MSS. studied by me are the two MSS. of the Prussian State Library of Berlin. Both were written by later hands. MS. No. 4042, to the folio-

The title *Ta'rīkh al-khamīs* points to the author's intention of dividing his work into five parts, though it appears from it that he did not do so. The work consists of 166—according to the catalogue of the Bodleian Library, loc. cit., of 169—chapters that are not numbered. The author himself puts it at the end of his work¹ that he wrote it from the 12th to the 20th Ramadān, 553/7th to 15th October, 1158; in the same year he went on pilgrimage, and, after returning home, he made a copy of his original text. Consequently, his work was originally planned as a preparatory study of a zealous Muslim just before his pilgrimage, after which he copied his first draft in a practically unaltered form.

The *Muthīr al-'azm* can best be styled a guide-book for the pilgrims. It contains a good many traditions, longer or shorter quotations from poetry, and edifying narratives bearing on the pilgrimage. The whole material, arranged according to the subsequent stations of the pilgrimage, is divided into ten parts named *abwāb* (chapters), and each part consists of a number of *bābs* (chapters). Every *bāb* bears a title indicative of its contents, and begins, as a rule, with a short description or definition of its subject-matter, followed by a number of traditions, legal opinions, poetical quotations, and in many cases also edifying narratives and curiosities connected with the place in question.

The general scheme of Ibn al-Jauzi's *Muthīr al-'azm* is as follows :—

Introduction (fol. 2b to fol. 5). The system of the work.

Part I (fol. 5 to fol. 36). The institution of the pilgrimage. *Hajj* and *'umra*. The pilgrims' way from Makka to Mount 'Arafa.

pages and lines of which I refer in this paper, seems to be an older and more complete copy than MS. Oct. 1452, which is deficient, fols. 53, 54, and 58, as well as the end of the work from fol. 300 onwards, being wanting. The fact that in the former MS. the author is constantly referred to in the first person of the singular whereas he is regularly mentioned as *al-muṣannif* (the author) in the latter MS., may perhaps point to the former MS. being copied after the autograph, which might not have been the case with the latter MS.

¹ Fol. 164, ll. 10-12.

Part II (fol. 36b to fol. 47). The state of *ihrām*.

Part III (fol. 47 to fol. 58). The Day of 'Arafa (the ninth Dhu'l-Hijja).

Part IV (fol. 58 to fol. 64). The immolation of animals on the 10th Dhu'l-Hijja.

Part V (fol. 64 to fol. 68b). The significance of Makka.

Part VI (fol. 68b to fol. 78b). The description of the Ka'ba.

Part VII (fol. 78b to fol. 95b). The *tawāf* or circuit of the Ka'ba.

Part VIII (fol. 95b to fol. 140). The market of 'Ukāz. Poetical quotations on Makka. The pilgrimage of prominent traditional and historical persons.

Part IX (fol. 140 to fol. 143). The significance of Madīna.

Part X (fol. 143 to fol. 164). The mosque of Madīna. Muḥammad's tomb. Funerary inscriptions, verses, and sayings about graves, proverbs by famous wise people.

Conclusion (fol. 164 to 164b). A list of pupils who heard the work from the author's son.

II

As may be seen from his general history *Kitāb al-muntazam*, Ibn al-Jauzi's peculiarity is the conscientious quotation of his authorities and his keenness about *isnāds*.¹ This also holds good for his *Muthir al-'azm*.

For the grammatical interpretations of the names of the places visited by pilgrims Ibn Fāris and az-Zuhrī are the authorities repeatedly referred to. As for canonical law (*fiqh*), the opinions of all the four orthodox schools are regularly quoted about the ceremonies of pilgrimage though the Ḥanbalite school, to which Ibn al-Jauzi was a fanatical adherent,² is referred to more frequently and in greater detail than the three other schools.

As regards tradition the most important literary sources our author drew upon were the *Sahīhs* of al-Bukhārī and

¹ See my paper, *JRAS.*, 1932, pp. 54 and 64–5.

² *Ibid.*, pp. 53–4.

Muslim. His lesser authorities are Muhammad ibn Sirīn, Abū ‘Ubayd, Thaur, and al-Khaṭṭābī. In addition to these names generally known, however, there are four authorities peculiar to Ibn al-Jauzī, whose works seem to have been lost.

Three of these traditionists regularly figure also in his *Kitāb al-muntaẓam*. The most important of them is al-Qazzāz, quoted also in the *Muṭhīr al-‘azm* as either ‘Abdarrahmān ibn Muḥammad or Abū Manṣūr al-Qazzāz, an eminent disciple of al-Khaṭṭābī al-Baghdādī.¹ Our author’s grandson, Sibṭ ibn al-Jauzī, in his *Mir’āt az-zamān*,² characterizes him as being pious, good, very silent, and constant in his retirement from people. He died in Shawwāl 535/10th May to 7th June 1141, and was buried in the Bāb Ḥarb at Baghdaḍā. He heard also Ibn al-Mahdī, Abu'l-Ghanāyim, Ibn ad-Dajjājī, Abū Ja‘far ibn al-Maslama, and many others. Besides our author, al Qazzāz also influenced Tājaddin al-Kindī.

Next to al-Qazzāz, it is to Muḥammad ibn Nāṣir that Ibn al-Jauzī most frequently refers in his traditions.³ According to Sibṭ ibn al-Jauzī’s *Mir’āt az-zamān*⁴ he, Abul-Fadl Muḥammad ibn Nāṣir ibn Muḥammad ibn ‘Alī ibn Nāṣir as-Sallāmī ad-Dārī al-Fārisī, was born on 25th Sha'bān 477/27th December 1084; he was a sagacious *hāfiẓ* who knew many *isnāds*. A contemporary of these two traditionists, Muḥammad ibn ‘Abdalbāqī, a name frequently mentioned also in the *Kitāb al-muntaẓam*,⁵ was Ibn al-Jauzī’s third most important authority for his traditions in the *Muṭhīr al-‘azm*.⁶ His fourth

¹ Cf. my paper, pp. 65–6. His full name is, according to as-Sam‘ānī’s *Kitāb al-ansāb*, ed. D. S. Margoliouth, p. 451, Abū Manṣūr ‘Abdarrahmān ibn abī Ghālib Muḥammad ibn ‘Abdalwāhid ibn al-Ḥasan ibn al-Munāzil ash-Shaybānī al-Qazzāz. According to the same passage, his master was also Abu'l-Husayn ibn al-Yaqūr. Al-Qazzāz’s father Abū Ghālib, known as Ibn az-Zurayq, was also a renowned traditionist.

² Ed. J. Richard Jewett, Chicago, 1907; see pp. 107–8, where his name is written rather carelessly as ابن دریق العرار, and his father’s name as ابن دریق العرار.

³ Cf. my paper, loc. cit.

⁴ Ed. cit., p. 108.

⁵ Cf. my paper, p. 68.

⁶ See also in the *Mir’āt az-zamān*, ed. cit., p. 108–9.

important authority on tradition is Abū Bakr Muḥammad ibn Yaḥyā aṣ-Ṣūfi,¹ of whom no literary work has remained to us.

But it is on account of the abundance of its poetical quotations that the *Muthīr al-‘azm* is really important for Arabic studies. So many shorter and longer excerpts from poems does it contain that the superficial reader is easily inclined to regard the work as a mere compilation of Arabic poetry depicting Makka and the pilgrimage. Exaggerated as this view might be, it is a fact that the *Muthīr al-‘azm* is full of quotations from verses by about three-score poets. Among them Ibn al-Jauzī also presents himself as a poet with excerpts from five *qasīdas* of his own. His favourite poets are doubtless ar-Ridā and this latter's disciple Miḥyār ibn Marzūya; from the *Muthīr al-‘azm* alone copious anthologies of these two poets could be extracted and compiled.

The following list contains the names of all the poets quoted by Ibn al-Jauzī in alphabetical order, with references in parentheses to folio-pages where their names occur.

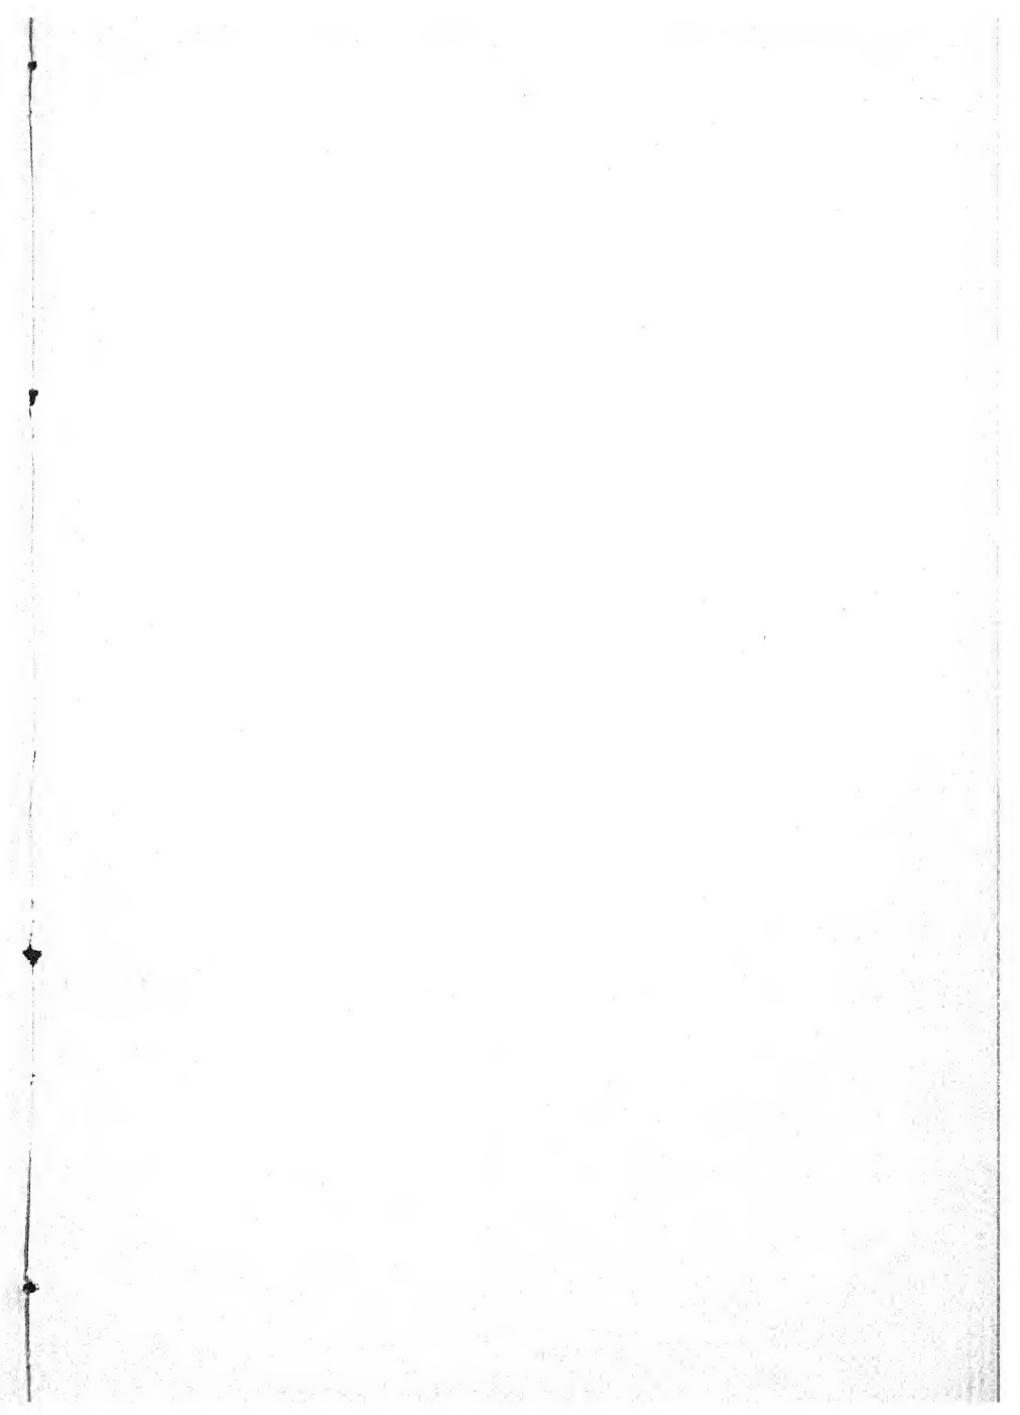

Ibrāhīm ibn Sūl al-Kātib (19b); *‘Alī ibn Aflāh* (25, 63b); *Abū Bakr ibn al-Anbārī* (27b, 60b, 102); *Abū Ja‘far ibn al-Bayādī* (24, 105); *Abū Ghālib ibn Bushrān* (18); *Ibn al-Jauzī* (18b, 27b, 106b, 107, 107b, 108, 108b, 139b); *Ibn Hayyūs* (103); *‘Abdarrahmān ibn Khārijā* (133, 134); *Muhammad ibn al-Khafājī* (24b, 27, 105); *Abū ‘Abdallāh ibn al-Khayyāt* (104b); *Ibn ad-Damīna* (19b, 102b); *‘Umar ibn abī Rabī‘a* (55b, 63b, 137); *Ibn ar-Rūmī* (12b); *Ibn Sābiṭ* (134); *Ibn ash-Shibl* (104b); *Ibn Fāris* (29, 55b, 64b, 92b, 140, 140b); *Abū Manṣūr ibn al-Fadl* (24, 82, 106); *Ibn al-Mu‘tazz* (55b); *al-Wazīr ibn al-Maghribī* (24); *Abū ‘Ubayda* (60b, 94b, 140b); *Abu'l-‘Atāhiya* (163); *Abū ‘Umar* (60b); *Abū Firāsh* (29b); *Abū Naḍr* al-Asādi (Persian poet, 12b); *Abū Nuwās* (58b); *al-Akhtal* (140); *al-A‘rābī* (58b); *al-A‘shā* (99); *Abū ‘Abdallāh al-Bāri‘* (25, 104b, 132b); *Abu'l-Muhsin Zāhir al-Jabbār* (105b); *Jarīr* (129b);

¹ Cf. *Hājjī Khalīfa*, vol. ii, p. 594, No. 4032.

Jamīl (102); *al-Junayd* (83b, 84); *al-Harīrī* (26, 26b); *Hassān ibn Thābit* (99); *Dhu'n-Nūn* (87); *ash-Sharīf Ridā* ibn Muhammad ibn al-Ḥusayn (16, 19b, 55b, 78b, 102b), 129b–130b); *az-Zuhrī* (64b, 134); *Ja'far ibn Aḥmad as-Sarrāj* (105); *as-Sarī ar-Ridā* (105b); *ash-Shiblī* (61b, 78b, 83, 129); *as-Ṣimmat al-Qushayrī* (19b); *at-Tā'i* ibn 'Amr Allāh (the caliph, 12b); *Abū Muḥammad 'Abdallāh ibn 'Uthmān an-Nahwī* (137); *al-'Urjī* (55b); *'Umar ibn al-Khaṭṭāb* (the caliph, 19); *Gharwal ibn 'Aus al-Hutay'a* (140); *al-Farazdaq* (60b); *Qays al-Majnūn* (102); *Kuthayyir* (102b); *Mihyār ibn Marzūya* (17, 20–4, 29, 54b, 63b, 103–4b, 130b, 137b–9); *al-Harth ibn Khālid al-Makhzūmī* (19, 135b); *Abu'l-Qāsim al-Mutarriz* (106); *an-Nābigha adh-Dhubyānī* (99, 140).

Thus, the *Muṭhīr al-'azm* is an ample repository of all kinds of information about the pilgrimage to Makka, which its many-sided author could have gathered from the vast storehouse of Arabic literature. As it affords a good survey of the rituals and customs of the pilgrimage and contains a profuse anthology on this subject, an edition of it would do good service to Arabic studies.¹

¹ That the *Muṭhīr al-'azm* impressed later authors, appears from a description of Makka and its holy mosque by Ḥusayn ibn Muḥammad ad-Diyārbakrī, Ḥanbalite or Ḥanafite qādi of Makka (d. after 982/1574–5), see the MS. of Berlin (Ahlwardt, No. 6069), fols. 92–3. He evidently borrowed the title of Ibn al-Jauzi's handbook for his work on general history *Ta'rīkh al-khamīs fi abwāl nafs nafīs* (printed in Cairo, 1283 and 1302 A.H.).

BRICK II, A.

To face p. 547.]

The Gopālpur Bricks

By E. H. JOHNSTON

(PLATES VIII-X.)

OVER forty years ago a number of bricks, inscribed with Buddhist sūtras, were discovered in an underground chamber at Gopālpur in the Gorakhpur district of the United Provinces by men ransacking the site for building materials. Four of these came into the possession of Dr. Hoey and Mr. Vincent Smith, who published an account of the find with a transcription of one of the bricks in *Proc. ASB.*, 1896, July, pp. 99–103, but there is reason to believe that a number more remained in the hands of the villagers or were built into an indigo vat by the local zamindar. No further steps were taken for publication of the texts, though references to them have been made occasionally since¹; and the bricks themselves were lost sight of. On taking over recently at the Indian Institute in Oxford, I noticed in one of the cases of the small Museum attached to it several inscribed bricks, which on examination were found to be the missing ones, Mrs. Hoernle having presented them some fifteen years ago. They were still largely encrusted with mortar, which made the reading of many characters difficult, but Mr. Rickard of the Ashmolean Museum proved equal to removing these deposits and to rendering them as legible as on the day they were inscribed, except for certain fractures. As the contents are of considerable interest to Buddhist scholars, I publish a transcription of the unpublished portion here, and for the benefit of those interested in palæography I adjoin photographs of II A, III B, and IV A; it is not necessary to reproduce them in their entirety, as the writing on all the bricks is of the same kind and the repetitions in the matter are such that the portions not illustrated contain hardly any

¹ Pargiter, *The Kasia Copper-Plate, A.S.I. Ann. Rep.*, 1910–11, pp. 73 ff.; *Ep. Ind.*, xxi, p. 195; B. C. Law, *JRAS.*, 1937, p. 290.

characters of which typical specimens are not available on the plates.

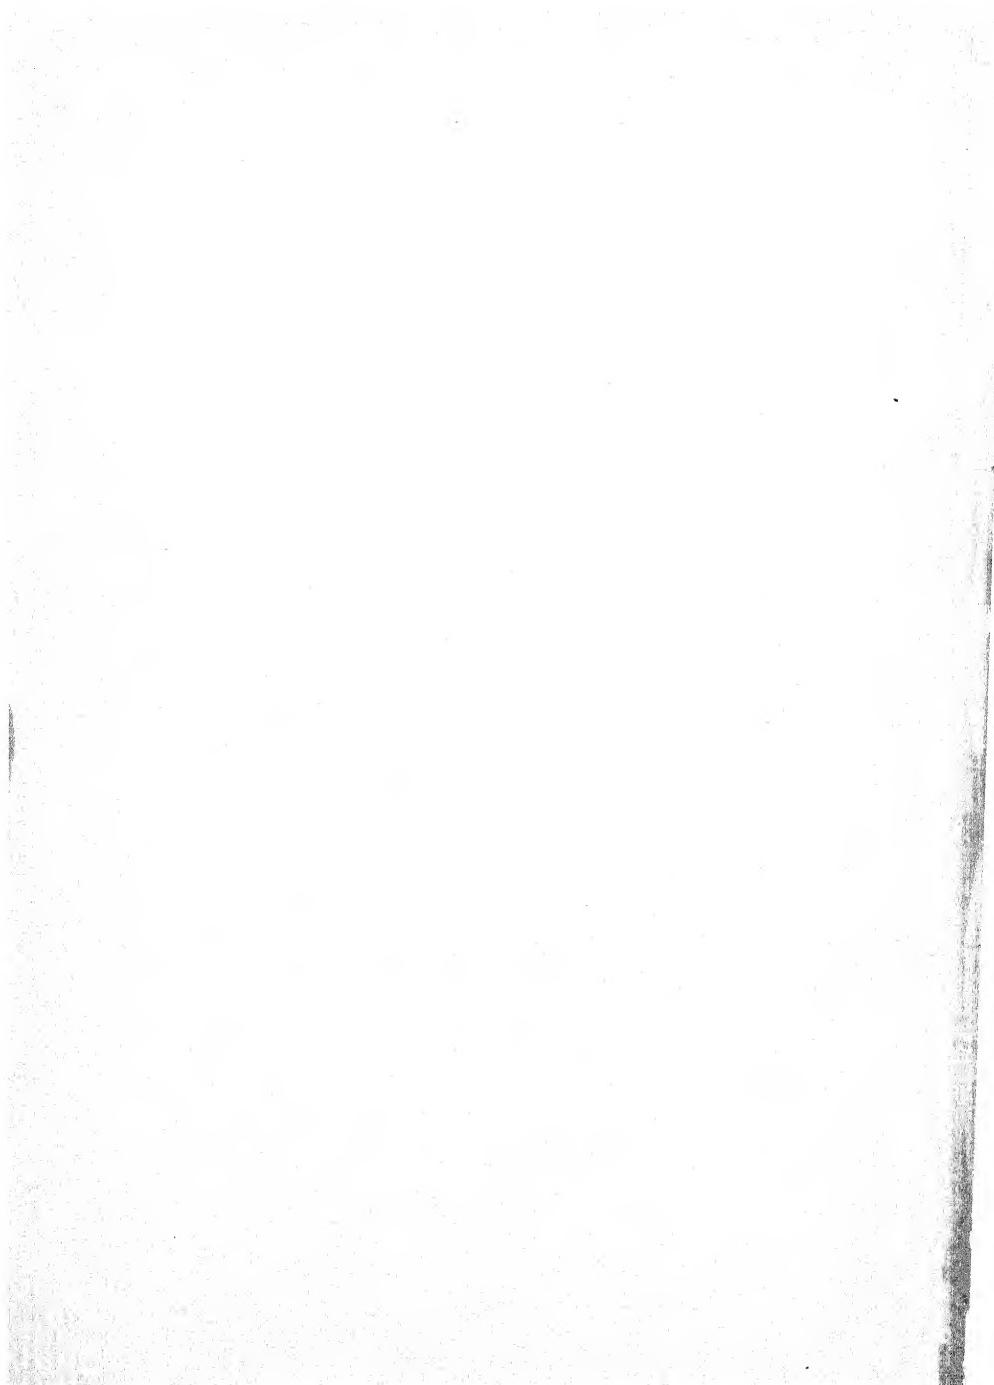

Dr. Hoey and Mr. Smith mentioned five bricks, but this now turns out to be due to a mistake. Bricks I-III are complete and in good order, except in a few places where portions of the surface have been knocked off; but Brick IV is in four fragments, three of which join together to make one half, while the fourth is not part of a separate brick but forms the lower corner of the other half of brick IV with a gap between it and the rest. These scholars also recorded the opinion that "the writing was evidently incised before the brick was baked", and on first examination I too thought that the semi-cursive nature of the writing pointed to this conclusion. But now that brick IV has been cleaned, it is evident that various deep depressions on its verso were caused during baking, possibly by adhesion to another brick, and that the text has been so disposed as to avoid these faults in the surface, from which it is to be inferred that the incision of the characters was executed subsequent to baking. Presumably also, if the letters had been cut in the clay, while it was soft and moist, a burr would have been left at the edges of the deeper cuts at least, but no traces of such ridges are visible on any of the bricks.¹ The form of the characters, particularly *ma*, *la*, and *na*, suggests that the date is in the neighbourhood of A.D. 500; the Nalanda bricks, described in *Ep. Ind.*, loc. cit., are of about the same date or possibly a few decades later. That coins of a much earlier epoch were discovered in the same chamber has evidently no bearing on the chronology of the inscriptions. The measurements of the bricks, which are not however quite symmetrical, in centimetres are as follows: I, $24.4 \times 11.5 \times 2.2$; II, $28.6 \times 12 \times 2.1$; III, $23.8 \times 11.6 \times 2.1$; IV, length not determinable, 13.4×2.7 .

¹ Since writing the above, I have seen in Dr. Le May's collection a terra-cotta plaque, the inscription on the back of which shows precisely the burr to be expected when letters are cut in soft clay.

BRICK III, B.

[To face p. 548.]

Turning to the contents, brick I gives the complete text of a brief sūtra, setting out the chain of the *pratītyasamutpāda* from both the *anuloma* and *pratiloma* aspects and closely related to *Saṃyutta*, ii, 1; its object seems to be to explain the applications of the terms *ācaya* and *apacaya* to the causal chain, a curious usage for which the nearest, parallel I can trace is to be found in the employment of these words in Pāli to signify the increase or decrease of the store of *karman* (e.g. *Dhammasaṅgaṇī*, 1013–14, 1397–8). The same text is given by brick IV, though with gaps due to parts being missing, and it is also known from the Kasia copper-plate (Pargiter, op. cit.). As brick I was published in the *Proc. ASB.* already quoted, it is not necessary to repeat the whole here, but certain readings there given can now be rectified. The references are to the lines of brick I.

Recto, line 1. For *āmantrayati* read *āmu* (both bricks).

Line 3. For *sādha ca susva ca* read *sādhu*.
The reading is clearer in IV than in I.

Lines 4–5. The missing part of line 4 of IV corresponds to the words from *m ācayah katamah* to *utpadyate*, but as there is not room for so many characters, presumably the sentence *yadutāśmin satīdām bhavaty asyotpādād ida*. *utpadyate* was omitted by IV, though wrongly in view of their appearing also in the Kasia copper-plate.

Line 6. I omits *śadāyatana* from the chain, but IV has it correctly.

Line 9 (and also verso, line 6). For °*duḥkhādermanasyo*° read °*duḥkhadarmanasyo*°.

Verso. Line 4. I omits *sparsa* from the chain, but IV has it correctly.

Line 7. For *kepamasya* (marked as a doubtful reading) read *kevalasya*. The two middle characters are not legible in I, but are clear enough in IV.

Line 9. The reading *āttamanasas te* is clear in IV.

Line 10. For [asya] *nanda[h]* read *abhyanandan*, but the

final character, though certain, is not quite clear on either brick.

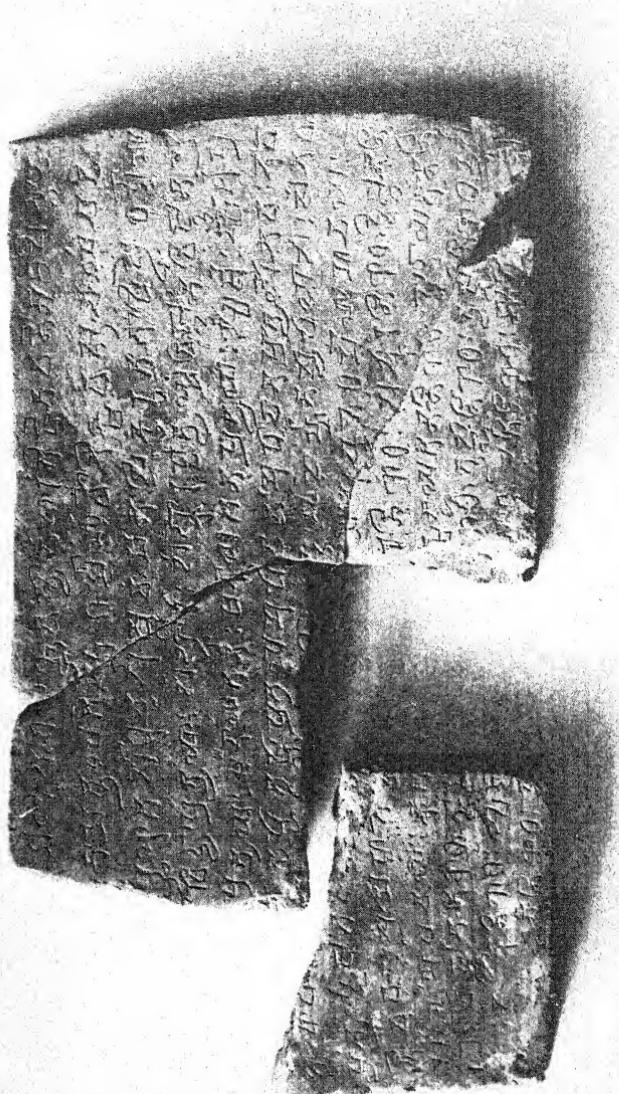

Bricks II and III contain consecutive portions of a sūtra, in which the Buddha describes how he attained to a knowledge of the causal chain on the night in which he reached enlightenment. As both the beginning and end are missing, it remains uncertain whether the sūtra gave an account of all the events of that night or was restricted to the subject of the *pratītyasamutpāda*. That the canon of some Hinayāna schools contained a sūtra of this description is a natural inference from passages such as *Buddhacarita*, xiv, 52–83¹; but the nearest analogous passage I can find in Sanskrit is at *Lalitavistara* (ed. Lefmann), pp. 346–8, which differs somewhat in wording and matter from the present text, but which has at the beginning the original sentence from which *Buddhacarita*, xiv, 50–1, were taken. It starts in the middle of the *anuloma* aspect of the chain, which ends with *vijñāna*, not with *avidyā*, as in the *Lalitavistara* passage, despite the fact that the *ratiloma* aspect has all the links. The *Buddhacarita* however, presents the same features and has another in that its verse 73, which, as freely translated by me the Tibetan, runs, “Then after he had understood the order of causality, he thought over it; his mind travelled over the views that he had formed and did not turn aside to other thoughts,” reproduces the sense, and possibly some of the wording, of the sentence at the end of the *anuloma* exposition (brick II A, lines 8 and 9); this does not appear in the *Lalitavistara*, and I would suggest that Aśvaghoṣa knew the sūtra in this or in a very similar recension.

The text of the bricks runs as follows, characters which are doubtful or missing owing to the damaged state of the surface being supplied in brackets.

A Few Corrections on Guy Le Strange's "Clavijo, Embassy to Tamerlane (1403-1406)"

BY H. KURDIAN

IN the new edition of *Clavijo, Embassy to Tamerlane*, translated from the Spanish by Guy Le Strange (publ. Harper and Brothers, New York and London, 1928), I noticed several errors and offer the following in correction thereof.

(1) p. 116, etc. Zegan.—This is the existing village of Zigana on the mountain of the same name. In native Armenian or Turkish pronunciation it is Zvānā. See description in *Armenia and the Campaign of 1877*, by C. B. Norman (publ. by Cassell, Petter and Galpin, London, Paris, and New York, no date, pp. 21-2).

(2) p. 125, etc. Taharten the Lord of Arzinjan.—The name of this lord of Arzinjan in Clements R. Markham's translation of Clavijo (1859, London edition) is spelled Zaratan. Although the contemporary Armenian historian Tovmas Medzopetzi (fourteenth century) spelled it Takhratan, and also the author of the *History of Leng Timour*, Ahmed Arabshah of Damascus, spelled it Tahartin, Clements R. Markham's transliteration Zaratan seems to me to be nearer the original form of the name, which, according to Evliya Efendi (seventeenth century), is ZAHIR-UD-DIN (*Narrative of Evliya Efendi*, London, 1850, vol. iii, p. 202).

(3) p. 144. The Lord of Maku "was a Roman Catholic Armenian) but whose name was Nur-ad-din".—In his notes Guy Le Strange says, "Nur-ad-Din, the light of the (Moslem) religion, is a curious name for a christian but doubtless it had been imposed on this christian governor by Timur, as later he did in the case of the governor's son" (p. 352).

I differ with this opinion because I do not believe that Timur had anything to do with the naming of this Armenian prince or lord, Nur-ad-Din. Among the Armenian nobles of

that period, the use of Muslim names was very common. Such another was the Armenian Christian (but not Catholic) noble of Tiflis, who in the year of our Lord 1284 is mentioned by the name of Karim-ad-Din. He was the elder son of the illustrious Armenian Prince Umeg.¹

We also find among Armenian princes of the thirteenth century such unchristian names as Hassan Chalal, Shahenshah, Assad, Djuma, Amir-Hassan, etc., all of them Armenian Christian nobles and princes. There are also a great number of Muslim female names applied to Armenian ladies of the same period.

(4) p. 329, etc. A certain Turkoman chief, *Qara Yusuf*.—Guy Le Strange in his notes says: “In the text incorrectly given as Qara Othman (Caraotoman)” (p. 363). However, Clavijo’s original Qara Othman is not incorrect, as G. Le Strange states, for at this time (beginning of fifteenth century) there were two Turkoman chieftains, one the *Qara Yusuf* of the *Qara Quyunlu* (Black Sheep) Clan, and the other *Qara Othman* (*Ossman*) of the *Aq Quyunlu* (White Sheep) Clan. To this last one Clavijo refers in his text, but G. Le Strange tries to correct it by *Qara Yusuf*, perhaps because he knew not of *Qara Othman*.

After the death of Timur (1405), *Qara Othman* and *Qara Yusuf* warred upon one another for years. *Qara Othman* was the lord of Amida (Amid, Diarbekir), who attacked Arzinjan several times, and in 1417 he retook and occupied it, holding it until 1435.

Clavijo states that *Qara Othman* was a “vassal” of Timur, but if we change the name to *Qara Yusuf*, as Guy Le Strange would have us do, we find that *Qara Yusuf* was never a vassal of Timur, but, on the contrary, an arch enemy of Timur, against whom he always fought, as did Sultan Ahmed Jalair. Both of these eventually had to flee the country to escape Timur. They were first sheltered by Sultan Bayazid of Turkey

¹ [A collection of such *laqabs* taken by or given to Christians was published in the *Mashriq* by Habib Zayab.]

(captured by Timur in the battle of Angora, 20th July, 1402), but eventually they were forced to flee to Egypt, where they evidently remained until the death of Timur in 1405. Qara Yusuf did not appear in Armenia until a year or so after Timur's death.

(5) p. 331, etc. Alashkert (a town in Armenia).—Le Strange in his notes states : “ The exact position of Alashkert remains to be identified ” (p. 363). But the position of Alashkert is easily identified. The city of Alashkert, through which Clavijo passed on his return journey (1st September, 1405), is marked on modern maps as Toprak Kala in the valley of Alashkert. In ancient Armenian history it was known as Vagharschakerd, being built by the Armenian King Vagharsch, in the second century. The town is fortified with walls and a castle, and stands at the foot of Sougav mountain in the province of Pakrevant of ancient Armenia. It is situated in a pleasant and well watered position, some 5,950 feet above sea-level, and was inhabited in 1914 by some 700 families, of which only 250 were Armenian.

(6) pp. 331–2. Clavijo narrates a story which he had heard in Alashkert. “ In this country of Great Armenia there had been formerly a famous and very powerful king, the lord of the whole land, who at the time of his death left three sons : and he had by his will divided Armenia among the three after this fashion. To his eldest son he had left this city of Alashkert with adjacent lands ; to his next son he had left Ani city, with its province, and to his third son Erzerum ; these cities aforesaid being the three capital towns of Armenia. The eldest son seeing that he possessed Alashkert, the strongest place in all the land, forthwith tried to dispossess his two brothers of their inheritance, and open war broke out between the three. The war being at its worst, each party now sought an ally to aid him against his rivals ; and the brother who was lord of Erzerum brought in that lawless Moslem folk, namely those Turkomans (already frequently mentioned). Then the lord of Ani for aid and to

do the like joined him of Erzerum and they two fell on their elder brother the lord of Alashkert, each with allies from among the Turkomans. Seeing and fearing these Turkomans the lord of Alashkert took counsel with himself and to do likewise for foreign aid called in that Moslem folk who were his neighbours, namely the Turks of the border. These Turks, however, had their language in common with the Turkomans already spoken of, who were the allies of the other two brothers, and they of one tongue making common cause, came to an understanding to take for themselves that city of Alashkert, putting its lord to death and leaving it in ruin. This done they slew both the other brothers, devastating their cities of Ani and Erzerum with the adjacent lands. Thus it was that the Moslems had come in and now held all Armenia ; for when they had conquered the cities they put to death most of the Christian Armenians who were the inhabitants, and their places had not since been occupied.”

About Clavijo's story, Guy Le Strange says in his notes, “ Armenian Historians make no special mention of this king and his three sons, but presumably it was Leo V, the last of the Rubenian dynasty, of whom Clavijo tells the story. See *History of Armenia*, by N. Y. Gregor, p. 182 ” (p. 363).

Guy Le Strange's assumption, as also the rest of his notes, requires corrections. Firstly, Leo V (1375) was not king of Greater Armenia, but of the Lesser Armenia (Cilicia). Secondly, he was not of the Rubenian dynasty, but of the Lussignian dynasty of Cyprus. Leo V (sometimes known as VI) became King of Lesser Armenia (Cilicia) by marriage, and only for a year or so. He died without issue.

Perhaps by Leo V, Guy Le Strange refers to the Leo IV (sometimes known as V), who was King of Lesser Armenia (Cilicia) during the years 1320–1342. He also was not of the Rubenian dynasty, but the Baberonian or Gorigossian dynasty. Leo IV died without leaving an heir, and had only one daughter, Zabel or Zablon, who married Amorry Lussignian.

The Rubenian dynasty at first was a dynasty of “ princes ”,

of which the last was Leo II, who later became "King" of the territory of Lesser Armenia (Cilicia) as the first Rubenian king, taking the title of Leo I, King of Armenia (1196-1219). As "prince" he was Leo II (1186-1196). Leo I also died without issue.

Besides, Clavijo's story is told of Greater Armenia, which never had a Leo as a king.

It is my opinion that we cannot accept Clavijo's story literally, but as a legend in which the downfall of Greater Armenia was caused by jealousy, treachery, and wars among "three brothers", that is, among Armenians themselves.

The *Father king* mentioned in the story is Armenia itself; the succeeding *sons* were the three Armenian dynasties of Greater Armenia that ruled simultaneously, and unfortunately with very little harmony. Those three dynasties were: first, the Pakraduni dynasty that ruled, with its kings and princes, in Eastern Armenia, the capital being Ani; second, the Ardzruni dynasty that ruled in Southern Armenia in the region around Lake Van, including Alashkert; and third the Garutz dynasty that ruled in Western Armenia, the capital being Kars. Of course it should be remembered that this legend cannot have historical and geographical accuracy; the boundaries of the above-mentioned dynasties are blurred, and the legend, when heard by Clavijo from the people (probably Armenian narrators) of Alashkert, was already three or four centuries old, for the last kingdom of Greater Armenia was demolished or disintegrated by immigration in the eleventh century.

(7) p. 334. Tartum.—About this castle and city Guy Le Strange in his notes says, "Tartum (its exact position unknown) lies on the borders of Georgia and is spoken of by Ali of Yezd, who describes the siege" (p. 363). However, there is nothing uncertain about the location of Tartum or Tortum, because it still exists as a town on its ancient site. On almost any map one finds a small lake Tortum,

and also a river of the same name which, it is said, has beautiful falls, and had high cascades (the highest in the world). Tartum or Tortum was known in ancient Armenia as Vokaghe, and was (and still is) a castle with a little town below it. In the old days the entire population was made up of Christian Armenians, but when the Turks captured it in 1514, they used force to convert them to Islām, and many of them were converted to the new religion. All the castles near Tartum and in the surrounding region were captured by the Turks in 1548, but we still hear of large numbers of Christian Armenians in that territory as late as 1590. According to the contemporary Armenian historian, Hagop Garnetzi, a Turk named Djafar Molla became the census taker and tax-gatherer, and imposed such unbearable taxes on the Christian Armenians that they were forced to embrace Islām, which was the only means of escape, as their countrymen had found much earlier. These sad activities of the Turks re-occurred in the eighteenth and nineteenth centuries.

(8) p. 334. Ispir.—In Armenian this is known as Ssber. Strabo in his Geography (?20–10 B.C.) mentions this area as the Syspiritis, where, according to him, Alexander the Great sent his general Menon to seek gold, but Menon was killed by the natives. Strabo states that Syspiritis was a region with mines of gold and other metals.

Ispir (Syspiritis, Ssber) is easily located on the maps, in the vilayet of Erzerum, on the river Djorogh.

Some Rare Manuscripts in Istanbul

BY VIQAR AHMED HAMDANI

IN search of fresh material for the history of the Saljūqs of 'Irāq I had the good fortune, during my stay in Istanbul¹ from the middle of September, 1937, till the end of January, 1938, to find and study many MSS., both in Arabic and Persian. I propose to give here a bare inventory of some of these MSS. to bring them to the notice of interested Orientalists, with little or no attempt at scholarly presentation, as my entire time, at present, is occupied with the subject mentioned above. But I hope to contribute a detailed study of the same at a later date.

History of Nīshāpūr, by Imām Ḥākim Shaykh Abū 'Abdallāh al-Bayyi'. Brockelmann (i, Supp. 277) makes a brief mention of it. Barthold (*Turkestan*, p. 16) gives a longer account from Ḥājjī Khalifa where "Ḥakīm" is an obvious misprint for "Ḥākim". Now I happened to discover a digest of it in one of the mosque-libraries of Brusa. It is a manuscript 24 cm. by 16 cm. in fair *naskhī* with 21 lines to the page; it contains only 78 folios. Its author, whose identity I have not been able to establish so far, says in his brief introduction that Imām Ḥākim wrote a history of Nīshāpūr in A.H. 388, and then gives a short analysis of the work which, in effect, is the same as that of Ḥ.Kh. He goes on to say that Ḥākim added a supplement to his work, giving therein a geographical account of the place. The author adds that he abridged the work and that, now, he is presenting a Persian translation of his abridgment.

The digest contains a complete list of all the personages mentioned in the original work, with occasional brief notices

¹ I owe my grateful thanks to all my friends in Istanbul, Professors Köprülüzade, Ritter, Sharafaddin, and Mukramin Halil, and librarians and students who made my stay both pleasant and profitable.

of the very famous people (e.g. Imām Muslim, fol. 16b). On fol. 54b he says that Ḥākim completed his biographical work in Ramadān, 388, and that he added a supplement to it forty years later, giving an account of his masters and contemporaries.

It is followed, after one or two blank pages, by an abridgment presumably by another hand, of one Muhammad b. al-Ḥusain al-Khalifa, who says that he has omitted the *isnād* of the historical and geographical portion. Later on there follows a selection from the *Tabaqāt* of al-Sulamī by the same Khalifa.

Köprülü. 1152 (see Brock., i, supp. 623) is a “*Muntakhab*” of *Kitāb al-Siyāq* of ‘Abd al-Ḡāfir al-Fārisī, which is a supplement to the above-mentioned *Ta’rīkh Nīshāpūr*. I am preparing an edition of both these works for publication later on.

History of Halab (Brock., i, supp. 568), Ibn al-‘Adīm’s *Bughyat al-ṭalab fi ta’rīkh Halab*. In Istanbul a set of ten volumes is distributed between three different collections. A.S. 3036 is perhaps one of the earlier volumes, but its first few folios are hopelessly mixed up and probably contain a few folios from *Zubdat al-Halab* of the same author.

Aḥmad Thālith 2925 contains eight volumes of the same work. Paris 2139 is identical with the third of these eight. Faiz. 1404 supplies another volume. But the set is by no means complete. The question of its being an autograph, as has been clearly written on the fly leaf of some of these MSS., I have fully discussed along with a study of its main sources and a complete list of all the biographical notices found in the above volumes in a paper to be shortly published.

Ra’s Māl al-Nadīm (see Brock., i, supp. 586) is another historical work of value. Yeni Jāmi‘ 234 (size, 27 cm. by 18 cm., 17 lines, 211 folios) is an autograph. Nūr Osmāniya 3296 (24 cm. by 16 cm., 165 folios) is dated Saturday, 9th. Dhu ’l-Hijja 539, and the copyist is given as Abū Bakr ‘Ubaid Allāh b. Abī Sa’d. The author is Abū ’l-‘Abbās Aḥmad b.

‘Alī b. Bāba al-Qāshī. Brockelmann is obviously wrong in calling him “Bāni”, so is Bankipore, xv, 1044, in quoting from Ṣafadī as “Bāna”. Ibn Bāba has been quoted by two writers, Ibn al-‘Adīm and Ibn Khallikān (de Slane, 90), who gives him wrongly as “al-Qābisi”.

Now this handbook was composed in Ramadān, 501, and completed on the 10th of the following month for his princely pupil, Sa’d al-Mulk Abu ’l-Fath Muḥammad b. Bahrām b. ‘Alī. It contains, *inter alia*, an account of the Khilāfat till al-Qā’im with a bare mention of the names of his two successors, followed by brief notices of the Imāms of the Shi'a and the Bāṭiniyya and the Tāhirī, Sāmānī, Dailamī, and Ghaznawī dynasties. He does not include the Saljūqs in the present work, saying that he has resolved to write a separate book on the origin and rise of the Saljūqs in Khurāsān, ‘Irāq, Rūm, Shām, Fārs, and Hijāz down to his own times. It seems that the author belonged to the class of professional entertainers in ‘Irāq, whence he travelled to Khurāsān where he had cause to deplore the prostitution of his profession. His threefold division of the entertainers is wrongly taken by the Bankipore cataloguer to apply to the people of Khurāsān in general, as our MSS. clearly say: “On entering Khurāsān I found those catering for the social entertainment of the viziers and the nobles divided into three classes.” Nothing more is known about the author and his patron.

Nasī’im al-ashār (A.S. 3487) is a valuable history of the Viziers in Persian¹ completed on the last day of Ṣafar, 725. The author, who does not name himself in the work, claims that his book is the first of its kind. Bodleian, Éthé, 347, *Āthār al-wuzarā*, gives our work as one of its sources. On detailed comparison I found the latter to have used our work wholesale and almost *verbatim*.

An older copy of the famous *Mujmal al-tawārīkh wa-l-qīṣāṣ* (see Storey, ii, 67–8) is found in the rich private collection of

¹ Dr. Tauer’s comprehensive work *Les Manuscrits Persans Historiques des Bibliothèques de Stamboul* does not seem to mention it.

Köprülüzade Fuad Bey, who very kindly permitted me to consult it in his comfortable study. It is nearly fifty years older than the Paris MS. The colophon gives Muḥammad b. Talkāwī as the copyist, and dates it on Sunday, 14th Shawwāl, 751. (Size, 26 cm. by 18 cm., 21 lines.) It supplies many good readings to the defective Paris MS. Its publication was promised by two famous French scholars, but unfortunately it has not seen the light of day. I am happy to record that Fuad Bey has very kindly consented to lend it to me in order to prepare an edition of it, and also to contribute a preface in French dealing with the history of the manuscript.

FABLES

Sindbād-nāma ('Ashir 861; and in Bayazid Kutubkhāna, Amasia).¹ Amasia MS. is the older of the two, and is dated A.H. 605. The other is dated 5, Rabī' i, 985. It is needless to add any more details as Professor H. Ritter has planned to publish it.

Kalīla wa-Dimna by Naṣrullāh (Jārullāh 1727) is to my mind the oldest manuscript of the book available. It was copied by Maḥmūd b. 'Uthmān b. Abī Naṣr al-Tabarī, completed on the morning of Thursday, 27th Muḥarram, 551.

Now the Persian scholar Mirzā 'Abd al-'Azīm Khān Gurkānī in his edition of the work has worked out the approximate date of its composition, and has placed it between A.H. 536 and 539. Thus our manuscript, though in a very bad condition, containing 327 pages (24 cm. by 15 cm.) in legible *ta'līq* is of the utmost value in establishing the correct readings. It proves beyond doubt that the fresh stories added by the learned Persian editor formed no part of Naṣrullah's text.

I hope to deal with the MSS. of the *dīwāns* of Amīr Khusrau, Ibn Yāmīn, Awḥad al-Dīn of Kirmān, and his pupils, Awḥadī and 'Irāqī, and Mīr 'Alī Sher Fānī, on some other occasion.

P.S. Later I have found a notice of Ibn Bāba in Yāqūt's *Irshād*, I. 230, where he is vaguely called Lawah or Ibn Lawah.

REVIEWS OF BOOKS

Near East

NEUARMENISCHE GRAMMATIK, OST- UND WESTARMENISCH
MIT LESESTÜCKEN UND EINEM WÖRTERVERZEICHNISS.

By Dr. ARTASCHES ABEGHIAN. Lehrbücher des Seminars
für Orientalische Sprachen zu Berlin: Band XXXVI.
8 x 6, pp. x + 292. Berlin und Leipzig: Walter de
Gruyter & Co., 1936. 10 RM.

The few Europeans who have studied Armenian have usually concentrated their attention on the classical language, which is of importance for both patristic and Classical Greek studies; since all Armenians are said to be bilingual, and many of them are marvellous linguists, communication with them has usually been possible in some more familiar language. The list of works enumerated at the commencement of this volume includes, however, some in English, French, German, and Italian, besides many in Armenian; one in the last language, by Kirejjian, Constantinople, 1864, is not found in this list. The present work deals with both the literary dialects, using separate types for each; there are very considerable differences between the two dialects, e.g. the form used for the present tense in the Eastern (Turkish) dialect is employed for the future in the Western (Russian). Dr. Abeghian's treatment of the subject is very full and thorough, and includes an ample chrestomathy containing extracts from works in both dialects, both in prose and verse. Perhaps more than one specimen might have been given of the writings of Raffi, who is at the head of Armenian novelists. Also an example of the phonetic orthography used by some modern writers would have been welcome.

A traveller in Armenia (before the War) heard great varieties in pronunciation, and minute differences between certain pairs of letters seemed to be better preserved in the Western

than in the Eastern dialect. Thus I have found a Turkish-Armenian confuse *wlā-* with *wlg-*, which a Russian-Armenian would probably distinguish. Some account of the consonants by an expert in phonetics would have added to the value of the work, which otherwise both in content and arrangement is admirably adapted to the needs of students.

A. 976.

D. S. MARGOLIOUTH.

RECHERCHES SUR VICINA ET CETATEA ALBA. By G. I. BRĂTIANU. Universitatea din Jasi: Contribution à l'Histoire de la Domination Byzantine et Tatare et du Commerce Génois sur le Littoral Roumain de la Mer Noire. $10 \times 7\frac{1}{2}$, pp. 193, pls. 2. Bucharest: Paul Geuthner, 1935. Frs. 20.

This volume inaugurates a series of historical monographs to be issued by the University of Jassy, in Roumania. The general editor of the series is Professor G. I. Brătianu, who is also the author of the initial treatise.

The present work deals with the history of two ports on the coast of the Black Sea, named Vicina and Albă respectively. The author traces the history of the former from the end of the eleventh to the middle of the fifteenth century, and demonstrates its importance for the commercial history of the Levant in the Middle Ages. He shows further that it has often been confused by ancient writers with Vezina at the mouth of the Kamčyk, and that this confusion has vitiated a great deal of what has been said about it.

After discussing certain hitherto neglected sources of information concerning the history of Albă (Akkerman) on the Black Sea, the author passes on to a review of Balkan ethnography in the Middle Ages, dealing especially with medieval references to the Bulgars and Wallachians, with especial reference to the Romance of Troy (Dictys and Dares) and to a passage in Robert of Claris's chronicle on the conquest of Constantinople. This portion of the book will probably

prove of the widest general interest, the rest being somewhat limited in appeal.

A cordial welcome will be extended to this new series, and it is gratifying to see that the editor has preferred to present it in French, rather than in Rumanian, thus ensuring a wider circulation.

A. 634.

T. H. GASTER.

LE CHAMP DES ROSEAUX ET LE CHAMP DES OFFRANDES. By RAYMOND WEILL. *Études d'Égyptologie.* 10 × 6½, pp. xi + 176, figs. 2. Paris : Paul Geuthner, 1936.

The researches, the results of which appear here, were begun by M. Raymond Weill with the object of discovering the meaning of a unique and enigmatic hieroglyph in a text of the Old Kingdom in the Cairo Museum, which Professor J. Capart published in *Kêmi*, ii, 1, 2, as a challenge to scholars, under the title "Un hiéroglyphe mystérieux". The sign in question represents a man leaping upon a bull in the Cretan fashion, the bull standing upon an inclined plane marked with zigzag lines to represent water. At a later date in the same periodical (*Kêmi*, iv, 190) M. Capart published in a short note a passage from the Pyramid Texts (Pyr. 1359), which runs, *dʒ.k kʒ wr ir sht wʒdt . . .* "Mayest thou cross over . . . the Great Bull to the green field," and suggested on the evidence of this passage that the enigmatic hieroglyph should be understood as representing the deceased mounting upon the bull's back in order to be carried by it across the intervening water to the "Field of Offerings". A more complete version (Pyr. 792), however, deterred M. Weill from accepting this explanation. Here the text, which reads *dʒ.k m kʒ wr . . .*, etc., supplies the missing preposition *m* and clearly shows the meaning of the phrase to be "Mayest thou cross over by means of the Great Bull". There seems, therefore, little to prevent the mysterious hieroglyph in the original text from being interpreted as *dʒ.f m kʒ wr*, "May he cross over by means of the Great Bull," but M. Weill will have none of this,

and decides that the sign is to be rendered "vainqueur du taureau", *dwny* (p. 36), the bull in this case being the guardian of the entrance to the "Field of Offerings".

As to the general conclusions reached, M. Weill finds that the "Field of Reeds" and the "Field of Offerings" were identified respectively with the East and the West, the points of the rising and setting of the sun, and goes on to show that Osiris was an intruder into the domains of the sky. The analytical summary on pp. 158–163 is useful for following out the steps by which M. Weill's conclusions were arrived at.

On p. 7 the quotation from *Hier. Texts Br. Mus.*, i, pl. 30, though correct as far as that publication is concerned, nevertheless does not quote the original. This has *imshwy m³-hrw hr.s m htp*, etc., as reference to part vi, pl. 1, of the same work would have shown, the architrave in question having been published there later in an emended form. Incidentally, M. Weill's interpretation here of *hyy(t)* as an infinitive leads him into perilous waters. Surely the accepted rendering of these passages is "May he walk upon the goodly ways whereon the revered ones walk," ☐Λ being generally understood to be a verb not *secundae geminatae* but *tertiae infirmae*.

A. 648.

M. F. LAMING MACADAM.

PERSIAN LITERATURE, A BIO-BIBLIOGRAPHICAL SURVEY.

Section II, Fasciculus 2: Special Histories of Persia, Central Asia, and the remaining parts of the World except India. By C. A. STOREY. 8½ × 5½, pp. 195. London: Luzac, 1936.

This is the third instalment of Professor Storey's valuable work. It contains an account of all Persian works dealing with the history of the countries named; the large and important class of writings concerned with Indian history will be the subject of the next fasciculus. Certain histories which deal mainly with Persia—such as the *Habibu's-siyar* and *Qipchāqkhān*—are to be found in the first fasciculus,

because their scope may be said to extend beyond Persia and its immediate neighbours. As if to make up for this we have here a number of authors, who would, perhaps, find a better place among the poets. The writers of the various Shāhnāmas, Tīmūrnāmas, etc., are scarcely historians. Qāsim-i-Gūnābādī, for example (who seems to have died in A.H. 982), was a mere panegyrist, and Bannā'i (Professor Storey prefers Binā'i) was certainly considered just a poet —to judge from Bābur's amusing reference to him.

Like its predecessors this fasciculus is excellently printed, and a careful reading has failed to discover any misprints, unless Ghilzah Afghāns, on p. 319, is a mistake for Ghilzai. It is a question whether Shanb-i-Ghāzān (p. 278) is correct; Rīzā Qulī Khān in the Farhang-i-Nāṣirī spells the word Shumb. Other poets besides Sa'dī write qaṣidas in praise of Juwaynī—Zu'l-Faqār for example. The autobiography of the Amīr 'Abdu'r-Rahmān (p. 406) has also been repeated by the Fayż-rasān Press of Bombay in a lithographed edition prepared by M. Ja'far Mawlā and M. Husayn Lārī, A.H. 1322. Of the contents of the Majma'u'l-inshā (p. 317) a description of the Turkish letters only is given in Rieu's Turkish Catalogue; the Persian Catalogue describes the Persian letters. The letters, by the way, contain examples which, if indeed they are really what they purport to be, should be worthy of careful study, and might easily throw fresh light on matters of great historical interest. One would like to know whether we have genuine letters written by Ghazālī to the Nizāmu'l-Mulk, by Uzūn Hasan to Sultān Husayn, by Tahmāsp to the Turkish Sultāns and Indian Emperors, and so on.

It may be feared that we shall have to wait some years for the completion of Professor Storey's work. Only then can we expect the indices which will facilitate the proper use of it. Without an index of authors, and another of the names of books, it will be a little difficult to use the survey as such a work of reference should be used.

Far East

THE NEW SOCIAL ORDER IN CHINA. By T'ANG LEANG-LI.

9½ × 6½, pp. xi + 282. Shanghai : China United Press, 1936. \$8·50. London : Kegan Paul, 15s.

This is one of those books that improve as the author warms to his subject. The account of Chinese civilization in the remote past, discussed in the earlier chapters, has been done more convincingly by other hands. Mr. T'ang has evidently not kept abreast of modern scholarship, or he would not speak of Lao Tzü, that most shadowy of figures, as having been "born about 590 b.c." or as having received a visit from Confucius in 518. His opinion of Confucius seems to waver a good deal, but in several passages he is decidedly unfair to the great Teacher. Simply because he has neglected to sift his authorities, he is capable of writing in this strain : "The people were to be kept in ignorance and ruled by fear ; Confucius even condoned torture, and referred it back to the all-wise ancients." There is nothing in the *Lun Yü* (our only reliable source of information about Confucius) that gives the least countenance to such a statement. According to Mr. T'ang, Confucius also drew up "an intolerably elaborate code of rules, prescribing with rigidity and in minute detail every phase of human activity". Several sayings in the *Lun Yü* go to prove, on the contrary, that Confucius' instincts were all for simplicity and not elaboration in ceremonial. "A man without charity in his heart," he once exclaimed, "what has he to do with ceremonies ?" That "ancestor-worship and filial piety form the foundation of Confucian philosophy" is another totally wrong conception. Filial piety holds no prominent place in his recorded sayings, and ancestor-worship has really nothing whatever to do with his teaching. It was in existence long before his time, and he seems to have tolerated the practice, but nothing more.

The tone of the book improves, as I have said, in the later chapters, and the author even finds some good to say of

Confucius. He writes very wisely on women's place in the social scheme, and justly points out that her position was never so low in the past as superficial observers would have us believe. In fact, it is probable that Chinese women enjoyed as many rights and privileges as their sisters in the West before the nineteenth-century movement for emancipation began. Sino-foreign relations are discussed with conspicuous moderation, and not all the blame for the somewhat humiliating position in which China finds herself to-day is laid at the door of the Western nations.

Thanks to its having been printed in China, the text is liberally interspersed with characters where these seem to be required ; but the transliteration is by no means all it should be, and aspirates are consistently ignored—except in the author's own name.

A. 793.

LIONEL GILES.

MANGHOL UN NIUCA TOBCA'AN (Yüan Ch'ao Pi-shi). Die Geheime Geschichte der Mongolen. Edited by ERICH HAENISCH. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. xii + 140, figs. 2. Leipzig : Otto Harrassowitz, 1937.

The Secret History of the Mongols is one of the most romantic original historical books in the world, though it must be admitted that it owes part of its romance to the adventitious fact that unofficial historical works in China are called "secret" without any real secrecy attaching to them.

Written in A.D. 1240 by an unknown author or authors in the Mongol script from derived Uighur, this book starts with the legendary story of the birth of Chinggis Khān and carries the history down to the death of Ögödei. It is, apart from one or two letters in the Uighur script, and one or two inscriptions in the P'ags-pa script, by far the oldest work in Mongol, and also by far the most important. The original text in Mongol script was used by Rashid ed-Dīn as one of the sources of his *Jāmi' at-Tawārīkh*, but has long since been

lost. The whole book was painstakingly transliterated into Chinese characters, with an abbreviated Chinese translation, at the beginning of the fifteenth century, and then completely forgotten. The first Western scholar to discover it was the Archimandrite Palladius in A.D. 1872, but it was left to Dr. Haenisch to publish it in transcription for the first time in the present volume. In its present form, that is as a Mongol text with a table of variant readings and a few notes, it cannot hope to appeal to a wide public, but Dr. Haenisch in his preface says that he has already completed a vocabulary and a German translation ; and this will be eagerly awaited by those scholars who have not the time or patience to disentangle the original text with the assistance of the existing dictionaries in Mongol script.

G. L. M. CLAUSON.

INTRODUCTION TO LITERARY CHINESE. By J. J. BRANDT.
Second edition. 9 × 6, pp. xi + 352. Peiping : Henri Vetch, 1936, 21s.

This is a most useful book, and it is not surprising to find it already in a second edition. It is divided into forty lessons, each of which includes one or more pieces of Chinese prose, with vocabulary, translation, and notes. The texts are of a varied character, comprising short stories, essays, official documents of different kinds, newspaper articles, and family letters—all selected with great judgment. Perhaps the most distinctive feature of the book is a large number of “grammatical sections”, giving examples of Chinese particles and their use in composition. These cannot but help the student greatly, though the wholesale introduction of European grammatical terms is to be deprecated, and the minute classification of particles as “intensifying”, “equalizing”, “limiting”, “adversative”, “assimilative”, and so forth, strikes one as rather overstrained. Professor Schlegel of Leiden once spoke on this subject with no uncertain voice :

"Lisez, lisez, lisez," he said to his pupils, "jetez vos grammaires au feu."

Several improvements have been made in this new edition, such as the insertion of page references in the index of characters; on the other hand, the type is smaller and the page much more compressed, which is surely a step in the wrong direction. A few points still needing correction may be noted: P. 58, 離 in No. 15 does not mean "to separate", but "to fall into", and 離亂 is "to encounter civil war". P. 62, 曾, so far as I know, can never mean "but", "and yet". Here it simply serves to strengthen the negative (並不 in the spoken language). P. 69, col. 2, for 士 read 土. P. 72, col. 1, it is absurd to label 以 as a pronoun, for it might just as well be called a verb. But why try to force it into any hard-and-fast grammatical scheme? P. 74, the title of the story should be, not "An unusual gem", but "Different kinds of gem", as appears from the context. P. 80, col. 4, 澤主 seems to be a misprint for 澤中. P. 83, for 忘 in the Vocabulary read 奔. P. 130, 豐 should be read *tso⁴*, not *tsan⁴*.

A. 785.

LIONEL GILES.

THE CRUCIAL YEARS OF EARLY ANGLO-CHINESE RELATIONS,
1750-1800. By EARL H. PRITCHARD, Research Studies
of the State College of Washington, Volume IV, Nos. 3-4.
10 x 6³₄, pp. 442, figs. 7. Pullman, Washington :
September and December, 1936.

This volume is an important contribution to our knowledge concerning a period of British relations with China which is often in much dispute. Dr. Pritchard, a former Rhodes scholar, has laid us under a debt by this thorough and well-documented analysis of what he truly calls Crucial Years. By 1750 the East India Company had established itself in Canton, but was suffering much difficulty and hardship: his theme concerns the causes which led to the attempt by

Britain to remedy matters, by establishing diplomatic relations directly with the Emperor in Peking, first with the ill-fated Cathcart, then the Macartney Embassy, in 1793.

Dr. Pritchard has spared no trouble in sifting reports and manuscripts, either at the India Office and the British Museum, or in his own country. For in Cornell University Library is a remarkable accumulation, the Wason Collection, of Macartney and other Papers relevant to the China affairs of that era. When one remembers, also, that the fracas in Boston Harbour was due to the matter of China tea, it is not surprising that an American student of historical research should be interested. In his Preface, Dr. Pritchard explains that his great predecessor and "master", Dr. Hosea Ballou Morse (whose name must always be remembered in R.A.S. circles), when he summarized the doings of these years 1750-1800 in his standard work, *International Relations of the Chinese Empire*, did not have access to the Wason Collection. Moreover, five volumes of the letters sent from the Court of the East India Company Directors to their supercargoes in China have been added to the India Office since Dr. Morse wrote, the greater part dealing with the two Embassies. Dr. Pritchard brings out the "tangle" of events of those years, into which short span events and personalities were indeed crowded. There was the American War of Independence, with Lord North and Chatham in conflict; the French Revolution, the rise of Napoleon, and the consequent war; the Industrial Revolution in England, and Arkwright's Spinning Jenny; the unwillingness of the Chinese to buy woollen goods from England but their willingness to buy opium from India; Russia's threat of war on China's north, and trouble in Tongking in her south. It sounds quite modern. Indeed the Chinese Throne's aversion to receiving Lord Macartney may partly have been due to a rumour that England had eyes on Tibet, and was having an affair in Nepal as a start-off, which rumour a hundred years later still prevailed in Peking. Yet it was also during those fifty

years that we had the introduction of Chinese garden arts into England, as witness Kew; and of her furniture, which inspired Chippendale. In China, however, it was a fateful era, for in it she crystallized and hardened, and tied foreign trade and intercourse down with shackles and fetters which galled and fretted intolerably.

After a historical survey which begins with the East India Company, founded because the Dutch raised unconscionably the price of pepper from 3s. to 6s. and 8s. a lb., Dr. Pritchard gives a couple of hundred pages to the questions and conditions of trade; and his figures and charts will be very valuable to the student. The next part of the book is of more interest for the ordinary reader, and is written in an easy style. It is of some comfort to find that the newest and trustworthy researchers into our Anglo-Chinese relationships, like Dr. Pritchard and Mr. Costin, seem to come to the same conclusions as those of the earlier standard historians of our youth. Macartney, says Dr. Pritchard, did not make the kowtow. His Mission was a genuine, expensive, and patient attempt on the part of Britain to seek Chinese recognition by friendly diplomacy. He ends his book on the note:

“Either England would have to conform her commercial desires to the restraints of that (*co-hong*) system, or she would have to use more potent arguments . . . to bring the exclusive, self-important, and superior-feeling Manchu administration to her terms.”

One could wish that the figures in the Appendices, of the goods imported and exported, were printed more clearly in an otherwise well-printed book. The Index is good. The very full Bibliography shows a wide and discerning list of sources. One misprint: the Bodleian is spelled with an “i”. But Oxford University, and the Professor who suggested these Crucial Years for study, could have nothing but satisfaction in this scholarly transatlantic study of England’s early relations with China.

SHE WAS A QUEEN. By MAURICE COLLIS. 9 × 6, pp. 301, map 1, ills. 17. London : Faber & Faber, 1937. 15s.

"She had a dazzling appearance. Her hair was done in a high looped knot, scented and jewelled, her eyebrows plucked, her whole face carefully powdered. She wore a jacket of India lawn, as fine as gossamer, white and peaked out at the shoulders and hips, cut with a lively rhythm, admirably fitted. Her arms showed through it and her breast, a golden colour. The old rose of her skirt was soft as sleep. Sitting sideways on a carpet, one arm supporting her weight, the elbow bent in against the joint like a bow, the other hand on her thigh, a large emerald on a tiny finger, she was so striking with her gracious face that the women fell back to admire her and, apt as they were at easy flattery, spoke from the heart when they uttered, 'Lovely lady, we worship you.' "

Those who have read Mr. Collis's account of that delightful rogue Siamese White of Mergui, now a port in Burma, will expect and find rich entertainment in this story of a queen to two successive Burmese kings of the thirteenth century. Mr. Collis uses his intimate knowledge of Burmese custom and character to add colourful and often amusing detail to the brief narrative in the Burmese chronicle, itself not altogether without humour. He receives some help from Marco Polo, and more, perhaps, from his imagination, for the graphic and precise description of the Tartar embassy fighting its way to its boats at Pāgan is not to be found in the Society's copy of the Book of Marco Polo, who is said to have been present. (The spelling Pagān, adopted by Mr. Collis, is inappropriate, for the second *a* is short and forward.) Mr. Collis has assumed—and no one can challenge the assumption—that Burmese social life in the thirteenth century hardly differed from that of the present day outside the towns, and he uses his remarkable command of English to make his actors live before his readers. There is a masterly drawing of

the character of the childish and neurotic king who tried to live down by boastfulness and cruelty the nickname of "dog's excrement" applied to him in his youth by his own father.

R. GRANT BROWN.

Middle East

SAMDHINIRMO CANA SŪTRA, L'EXPLICATION DES MYSTÈRES ;
TEXTE TIBÉTAIN. Édité et traduit par ÉTIENNE LAMOTTE.
Recueil de travaux publiés par les membres des Conférences d'Histoire et de Philologie. 3^e série, 34^e fasc.
10 × 6½, pp. 278. Louvain : Bureau du Recueil, 1935.

A pupil of Louis de La Vallée Poussin, the author belongs to that Franco-Belgian school of Sinologues, Tibetologues, and Sanskritists who, concurrently with Russian and Japanese scholars, have done much to enlarge our knowledge of the Sanskrit-Mahāyāna Buddhism, indirect sources of which have been, to a considerable extent, preserved in the monasteries of the secluded regions of the Tibetan highlands. Here the very seclusion of the place has acted, in a sense, as did the sand of the desert and the volcanic lava in hiding from the destructive forces of the times Tun-huang, Herculaneum, Leptis Magna, etc. The reconstruction of the Sanskrit originals has been greatly facilitated by the character of the Tibetan translations which are almost literal, too literal indeed to be good Tibetan. Thus, with the additional help of five Chinese sources, it has been possible for M. Lamotte to give in his annotations the Sanskrit equivalents of the essential passages and terms of the texts in hand.

Aside from the general gains connected with this method of reconstruction through comparison of extra-Indian sources, the present edition of the text together with its French translation derives special significance from the fact that the section of the Yogācāryābhūmi, called Nirnayasamgraha, cites at full length passages taken from all the chapters of

the Saṃdhinirmocana and explains them in detail (p. 16, lines 17-19). As the author claims in his preface, the Saṃdhinirmocana is a complete résumé of the Mahāyāna of the first centuries of our era (p. 24, lines 15-17). "We believe we have established that the Saṃdhinirmocana serves as connecting link between the Prajñāpāramitā and the beginnings of the Yogācāra Vijñānavāda school" (*ibid.*, lines 23-6). As such the text centres round the various problems bound up with the ontological nature of the Dharmas as well as those relating to their approachableness through perception.

The elaborate description of the psychological attitude of the initiated ("opérant") is a further subject for investigation.

Whether the translation, i.e. interpretation, of the title "Explications des *Mystères*" is wholly adequate remains, despite the author's careful consideration, a matter of opinion. We are here concerned with the fundamental problem of whether the essence of these early Mahāyāna texts is psychological and epistemological, or if it is mystical and irrational.

A. 577.

BETTY HEIMANN.

CONTRIBUTIONS À LA DIALECTOLOGIE IRANIENNE, II : Dialectes de la Région de Sēmnān. By ARTHUR CHRISTENSEN. Det Kgl. Danske Videnskabernes Selskab, Historisk-Filologiske Meddelelser, XXI, 3. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 197. København : Levin & Munksgaard, 1935. D.Kr. 9.50.

In the autumn of 1934 Professor Christensen spent ten days in the neighbourhood of Semnān (*circa* 225 km. to the east of Tehrān) in order to complete his previous studies (1915) on Semnānī. The new material collected by him contains specimens of the dialects spoken in the villages of Sorkhe, Lāsgerd, Sangsar, and Shamerzād. This oasis of vernaculars belonging to the northern Persian (Parthian) group has long attracted the attention of explorers. Some particular traits of Semnānī are found in several dialects spoken a long distance farther west in the Zagros mountains

and Kurdistan, and this fact may be connected with the migrations of tribes during the middle period of Persian history.

As the knowledge of rustic dialects of Iran progresses (see H. W. Bailey, in *Enc. of Islam*, iii, under *Persia, Language*), it becomes more and more evident that each of them in their isolation has experienced numerous influences which considerably complicate the task of classification. However, Professor Christensen has come to the following conclusions : "la région de Sennān nous offre trois dialectes distincts, le sennāni, le sängesäri et le sourkhéi-läsguerdī, qui se rapprochent aux dialectes de la région entre Kāchān et Isfahān, et un dialecte, le chämerzādī qui est apparenté au māzanderāni" (p. 22). All this on a very limited area !

With regard to the formative *hā-* used in Shamerzādī (p. 18) : *hā-komma*, *hā-kärdam* (= Persian *mā-konäm*, *kärdäm*) it is curious that already in the tenth century A.D. al-Muqaddasī, *BGA*, iii, 368, mentioned as a peculiarity of the language of Kūmis (to which Semnān belonged) such imperatives as *hā-di h* "give !" and *hā-kun* "do !". The *Tāzik-i Semnān* are mentioned in the history of Shāh 'Abbās I, *'Ālam-ārā*, p. 36⁹⁰. The title of Professor Christensen's informer, p. 9, in colloquial Persian ought to be transcribed **Mō'tamed [ol]-Aṭebbā*.

A. 605.

V. MINORSKY.

DIE WERTUNG DES TIERES IN DER ZARATHUŠTRISCHEN RELIGION. By WOLFGANG VOIGT. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 61. Munich : E. Reinhardt, 1937. RM. 7.

This book is of service in that it is the first systematic study of Zoroastrian animal cults that we possess. The author confines himself to the Avesta, and draws little on Pahlavī sources and less on foreign. Some will regret this rather arbitrary distinction, since the Avesta, as we know it, must be regarded as a fragmentary document, and not, as the author would hold (p. 20), as an united whole : the much

richer Pahlavī literature frequently supplies detailed information where the Avesta only has the merest hint or nothing at all. But so long as students of Religion rely on West's translations of the Pahlavī Texts, their sparing use of these Pahlavī sources is perhaps a not unmixed evil : for the happy days when these translations could be taken as authoritative are forever past, and the regrettable fact emerges that to quote West may be very different from rendering exactly the thoughts and words of the post-Sāsānian Zoroastrians. The book collects all the information supplied by the Avesta relative to the cow, dog, and other animals, and treats of their relationship to the gods and the part they play in the ritual. Veneration for the cow is properly attributed to the change from a nomadic to a pastoral form of existence, but the absence of the dog in the Gāθas and its prominence in the Vidēvdāt and the Herodotean account is not really explained. The statement on p. 52 that birds and dogs, being representatives of the "pure" creation, accept only the corpses of those who themselves have been "pure" on earth, is surprising, since Vd., v. 28 ff., gives us to understand that the holier the creature, the more extensive is the defilement caused by its corpse. The Three-footed Ass, the Kara Fish, and those other interesting monsters of which the Greater Bundahišn gives so full an account, receive only a passing mention in the work under review. A discussion of them would have been welcome. This book will be a useful introduction to the study of animal cults in Irān.

R. C. ZAEHNER.

LA CIVILISATION D'ASSUR ET DE BABYLONE. By Dr. G. CONTENAU. Bibliothèque Historique. $9 \times 5\frac{1}{2}$, pp. 260, pls. 16, figs. 52. Paris : Payot, 1937.

As a companion volume to his recent *Civilisation des Hittites et des Mitanniens* Dr. Contenau now presents a much-revised edition of his book on the Assyrian and Babylonian civilization first published fifteen years ago, and noticed in this

Journal for 1923, p. 106. Since then discovery in 'Irāq and the neighbouring lands, near and distant, has proceeded at an unprecedented rate, and in particular the pre-history of these regions has come to constitute almost a study by itself. The author, obliged by the scope of his work to confine himself to broad generalities, has nevertheless given a sound and interesting account of the new knowledge, accompanied by some independent judgments, and in the rest of the book, which treads more familiar ground, his mastery of the material has enabled him to write succinctly yet clearly on the early history of Assyriology, and on the religion, art, and institutions of ancient Sumer, Akkad, and Assyria. The illustration is plentiful, if not always very attractive, and there is a useful brief bibliography.

A. 922.

C. J. GADD.

EIN MANICHÄISCHES BET- UND BEICHTBUCH. By DR. W. HENNING. (Abhandlungen der Preussischen Akademie der Wissenschaften, 1936, Phil. Hist. No. 10). $10\frac{1}{2} \times 7\frac{1}{2}$, pp. 143. Berlin : Akademie der Wissenschaften, 1937.

As anyone familiar with the Manichæan publications of Andreas-Henning would have expected, this latest volume—the work of Dr. Henning alone—is an outstanding work of accurate scholarship and sound interpretation. The texts are divided into two parts : Persian-Parthian and Soghdian. The former, like the "Mitteliranische Manichäica" which preceded it, consists of text, translation, and a full glossary. Interesting among the small number of new words that appear in this book are *'whyr-*, "aufsteigen" which must be connected with Pahl. *clbu*, **vihēr-*, "move" (Dd. 16, 13¹⁸, **vihērīhēt* : *DkM.*, 114, 9 ; **vihērišnūkīh*, and *DkM.*, p. 352 *passim*), and *jdg*, "Ruhm," which gives the reading of Pahl. *yatak*, though the meaning of the latter (cf. *DkM.*, p. 352), must still remain doubtful.

The excellence of the Persian-Parthian section of Dr. Henning's book could be taken as a matter of course, but the Soghdian section is surprising in that it surpasses our expectations. This is the first time that an important text has been published in Manichæan Soghdian. Again we are given text, translation, and a full glossary; but beside all this there is an exhaustive philological commentary in which no difficulty is shunned and no passage, published or unpublished, that could throw light on the text neglected. Scholars may—and, no doubt, will—disagree on the interpretations of individual words, but none will dispute the industry and critical acumen which this work displays. Though the text is by no means easy, the commentary is so inclusive that beginners might well start Soghdian with it, for Dr. Henning has not confined himself to elucidating words hitherto unknown or wrongly explained, but comments also on those forms which, though common like the imperfects of verbs beginning with a vowel with prefixed *m-*, cause the beginner trouble. This book deserves unstinted praise and is indispensable to Irānian scholars.

R. C. ZAEHNER.

India

A SANTAL DICTIONARY. By P. O. BODDING. 11 × 7 $\frac{1}{4}$, vol. iv (L-Ph), pp. 750. Vol. v (R-Y), pp. 704, Kr. 45.00. Oslo: Norwegian Academy of Science and Letters, 1935-6. Kr. 47.00.

These two volumes bring to a close a monumental work, the result of a lifetime's close acquaintance with the Santal people, and careful, scientific study of their language. Mr. Bodding, a philologist of international reputation, has spent an unusual span of years in close contact with the Santals, as a missionary of the Santal Mission of the Northern (Lutheran) Churches. The appearance of his dictionary is opportune. Santali is the most widely used of all the aboriginal languages

of Northern India—according to the last Census Santals then numbered well over 2,600,000—; to the philologist, it is in itself a fascinating study ; and yet, until very recent years, it has received no official recognition from the Universities of Bengal and Bihar. Within the last two years, however, the Senates of the Universities of Calcutta and of Patna have agreed to recognize it as a vernacular for the purposes of the matriculation examination—though Calcutta has threatened to diminish the value of this step by recognizing only the Bengali script, one which has never been adapted to the special needs of Santali, and which is rarely used by Santals themselves or by those most closely acquainted with their language. In the Santal Parganas, also, Government is now insisting that its servants must acquire a working knowledge of Santali. And so a language, long studied in the Universities of Europe (as witness these volumes), is likely at long last to come to its own in its own land.

To every student of the language, Bodding's Dictionary will be an invaluable work. Not only, as a dictionary, is it more complete and detailed than its only predecessor, but it is also a valuable encyclopædia of all that concerns the Santal people. Under the headings of the appropriate words, valuable descriptions are given of the festivals, rites, and customs of the people ; of their methods of government, agriculture, etc. ; of the various implements and household utensils in use among them ; and vol. v closes with an index of the more important words under which matters of ethnological interest have been dealt with.

As to its value as a dictionary, there can be no doubt in the mind of anyone who has any knowledge of the language. The illustrative phrases given under each word, showing the various ways in which it is used in everyday speech, are obviously taken from the mouths of the Santals themselves, and while the English translation is not always so apt or idiomatic as it might be if it had been made by an Englishman, the meaning is always clear. Like most primitive peoples, the

Santals have not learned to classify things and actions, and this fact, reflected in their language, increases the difficulties of the lexicographer. Some words seem, to us, extraordinarily specific in their meaning, e.g. *toro*, here translated "To raise the height of a basket, etc., by putting sticks, leaves, etc., round the brim in order that it may hold more". Other words, however, while the underlying idea is clear, have a great diversity of applications, well brought out by Bodding, e.g. "*latar*—n., adj., postpos., adv., v.a.m. The underside, place below or underneath; below, underneath, beneath; put under, lay under, subject, conquer"; and "*ma*—intj., a particle covering an optative, precative, cohortative, permissive, and admissive sense". The wealth of Santali idiom is well illustrated, as also a rich sense of humour which finds expression in many descriptive words, e.g. "*lidhor lodhor*—with a vibrating motion (of the stomach of fat people)"—and one searches these volumes in vain for omissions in these respects. The work, too, is up to date. "*Phadar Saheb*," for instance, is included, as Santali for a "European Roman-Catholic priest or monk", though these have appeared on the Santal scene only within the last ten years, and it is still more recently that this description of them has become current.

A valuable feature, to the student, is the clear description given of the pronunciation of each letter. Take "V", for instance. "v is the denti-labial open voiced sound, in Santali found only medial, i.e. between two vowels, or between a medial consonant and a following vowel. It is a mistake to say that Santali only has the 'w', insisted upon by some English and Scotch people. The Santals have the sound, i.e. produced by placing the upper front teeth on the lower lip, or (perhaps more often, and this may to some extent explain the mistake) the lower lip against the front of the upper front teeth. The v is especially heard between and before the vowels e and i." The writer confesses to having been one of the "Scotch people" here mentioned as sceptical

of the occurrence of the “*v*” sound in Santali, but this minute description will send him back to the Santals determined to study the whole question afresh. Another valuable feature is the inclusion of the derivation of the word where possible.

The dictionary is printed by Messrs. A. W. Broggers, Printing Press, Ltd., Oslo, and the printing and whole get-up are first class, while printer’s errors are few and insignificant. In a short introduction to the last volume, Bodding gives the names of the Santal men and women who have been associated with him in this work. To them, as to him, all interested in the Santals owe a very real and very big debt of gratitude.

A. 744.

R. M. MACPHAIL.

THE ECONOMIC DEVELOPMENT OF INDIA. By VERA ANSTEY.

Third (revised and enlarged) edition. $8\frac{3}{4} \times 5\frac{1}{2}$, pp. xii + 582 + xlvi, maps and diagrams 10. London : Longmans, 1936. 25s. net.

The reviewer has little to do beyond welcoming the new edition of this standard text-book of Indian economics, and recording that it has been effectively brought up to date by revision of the text and the statistics, and the insertion of a new chapter dealing with the developments which have occurred since the publication of the first edition in 1929. The book is characterized by a union of comprehensiveness and accuracy which, in this field, is exceedingly rare : I can think of no important topic which has been overlooked or inadequately treated, and I have found scarcely any inaccuracies, though there is room here and there for differences of opinion regarding the weight to be attached to particular pieces of evidence. The only misprint I have noticed is on p. 165, where the date of Dr. Voelcker’s mission to India appears as 1898 instead of 1889.

A. 818.

W. H. MORELAND.

THE KHĀRĪĀS. By SARAT CHANDRA ROY and ROMESH CHANDRA ROY, with Foreword by R. R. MARETT. Vol. I, pp. xiv + 306, map 1, ills. 38; Vol. II, pp. 223 + lv, ills. 23. 5½ x 9. Ranchi: "Man in India" Office, 1937. Rupees 10.

The Khārīās, nearly 180,000 strong, are one of the great Mundāri-speaking peoples of the Chota Nagpur plateau. They comprise three groups, the largest and most progressive being the Dūdh Khārīās, concentrated in the south-west of Ranchi District and the adjoining State of Gangpur. To the west of them, spreading well into the Central Provinces, are the Dhelkis, whose culture is very similar. To the east, centring in Mayurbhanj, Dhalbhum, and Mānbhum, are the far more "primitive" Hill Khārīās, who have lost their national language and institutions, and adopted the speech of their Bengali and Oriya neighbours. Their low standards of life are apparently decadent, due to isolation and a harsh environment; they do not necessarily represent a phase through which the Dūdhs and Dhelkis have passed.

Mr. S. C. Roy's long, intimate friendship with the Mundās and Orāons is a unique equipment for his study of the Khārīās, whom, in his charming final chapter, he considers the "most loveable" of all. The details of his full and faithful record, which he modestly describes as the "beginnings" of a systematic survey, admit of no discussion here, for the field is new, and controversy he avoids. His topographical analysis of the "clan", which operates in the same way as the Hindu *gotra*, and is the key to all Indian sociology, shows up (without his saying it) the inadequacy of earlier surveys and of speculations based on literature untested by fact. His interpretation, *passim*, of custom as "satisfying an emotional need", particularly the need for "social solidarity", has administrative value. Thus, although matrimonial exclusiveness among the Khārīās is as rigorous as anything to be found in the "caste system", it makes for fusion rather than

fission, and gives them weight, which without it they could not have, in a Pan-Tribal *Samāj* for all Chota Nagpur.

No list of plates is given, and their numbering is erratic, but it would be ungracious to criticize them, for Mr. Roy, from his own resources, and with his son's help, has devoted his unrivalled insight and industry to a task which, in other parts of India, is borne by the State.

A. 887.

F. J. RICHARDS.

THE PRONUNCIATION OF KASHMIRI : KASHMIRI SOUNDS, HOW TO MAKE THEM AND HOW TO TRANSCRIBE THEM. By T. GRAHAME BAILEY. R.A.S., Forlong Fund, Vol. XVI. $9\frac{3}{4} \times 6$, pp. vi + 70. London : Royal Asiatic Society, 1937. 10s. 6d.

This comprehensive and precise description of the sounds of Kāshmīrī will be extremely useful to those who are learning to speak the language, or who, for any other reason, want to acquire an exact knowledge of its phonetic system.

Dr. Grahame Bailey possesses both a knowledge of the modern science of Phonetics and a practical experience dating from childhood of some of the languages of Northern India, subsequently re-enforced by many years of linguistic research, which qualify him in an eminent degree to deal with the subject.

The book contains, firstly, an exact description of the sounds found in the Kāshmīrī of the educated classes, to represent which the author makes use of the system of the International Phonetic Association, "as employed in recent works on African languages"; secondly, illustrations of all the ordinary declensional and conjugational forms, which he estimates at about 3,000; thirdly, specimen texts with inter-linear literal translations; fourthly, a Kāshmīrī-English Vocabulary containing all the separate words occurring in the book, which amount to about 1,000.

The work is founded on a study of the actual speech sounds

of three educated Kāshmīris, resident in London, but hailing from Śrīnagar. It is therefore free from the misleading symbols and conventions of the written language. The theory of the *mātrā* vowels is described, and their practical effects are of course taken account of, but all will agree with the author that "those *mātrā* vowels which are not pronounced need not be represented".

To assist the student the author gives tables in which he correlates his own vowel symbols with those employed by Sir George Grierson in his standard works on the language : the *Kāshmīri Manual* and the monumental *Dictionary of the Kāshmīri Language*.

Thanks and congratulations are due to Dr. Grahame Bailey for having undertaken and carried through this arduous piece of work.

Personally, in the improbable event of my ever again hearing the intriguing vowel-sounds of Kāshmīri boatmen, shikaris, and villagers, which disturb the peace of the traveller in Kashmīr and go on echoing, no doubt incorrectly, in his memory, I look forward to trying to identify them in this manual.

D. L. R. LORIMER.

THE MAHĀBHĀRATA. Vol. V. The Virāṭaparvan. Critically edited by RAGHU VIRA. $11\frac{1}{2} \times 8\frac{1}{2}$, pp. lxi + 362 + 1. Poona : Bhandarkar Oriental Institute, 1936.

It was my pleasant duty to review the first volume of the great Poona edition of the *Mahābhārata* in the *Journal* for 1936, pp. 317 ff. ; and for this, the next volume to appear, which, though containing the fourth *parvan*, is given the number five, the responsibility for the text lies with Professor Raghu Vira, already well known to Sanskritists for careful work on the ritual literature, under the general supervision of Dr. Sukthankar. The workmanship maintains the standard set by the *Ādiparvan*, as high a compliment as could be

desired by any editor, while its superiority to the late Mr. Utgikar's trial edition of the same text amply demonstrates the advance in critical methods which has marked the last ten years. The choice of this *parvan* for such an edition was indeed somewhat unfortunate. In the case of the first volume Dr. Sukthankar proved in effect that the various recensions went back to a common original, which itself could only have been prepared at a relatively late date in the evolution of the epic. But after subtraction of the many additions made by the Southern recension, the drawing of a similar inference for the *Virātaparvan* would only be valid for part of the text at the best, the change of sequence in the order of events for the battle scenes, adhy. 49–59 of this edition, being alone conclusive of the impropriety of holding the contrary view. That much of this *parvan* was a late addition to the epic has always been obvious; the detailed evidence now before us tends to show that we must regard these parts as even later in date than the most drastic critic might have dared to suggest, a point not without importance for the dating of other works deriving their plots from this portion of the epic.

In these circumstances the editor found himself in great difficulties and decided to base his text on the Northern recension, though he would be a bold man who would pronounce definitely that the oldest version of certain episodes is better preserved there than in the Southern recension when "deflated"; the course taken was probably the best way out of the difficulty. In minor details there is as usual much of interest; attention may be drawn to the editor's rendering of *sahita* in the phrase *aranisahita* at i, 3 (Addenda, p. 361), as "a pair". He gives no references in support, but, though such inquiries as I have made have failed to show any parallels in Sanskrit, the phrase occurs in a number of Pāli passages, where this seems to be the probable meaning, though not recognized by the dictionaries.

A. 850.

E. H. JOHNSTON.

THE TRAVANCORE TRIBES AND CASTES. Vol. i. By L. A. KRISHNA IYER. $8\frac{1}{2} \times 5$, pp. xxi + 277, ills. 59, map 1. Trivandrum, Government Press, 1937. Rs. 7.

In this valuable work Mr. L. A. Krishna Iyer follows in the footsteps of his distinguished father, who has given us the four volumes of *Tribes and Castes of Mysore*.

The book, which is the first of two or more volumes on the population of the Travancore State, is furnished with an author's preface, a foreword by Dr. Cousins, Head of the Fine Arts Department of Travancore University, and an introduction by Dr. Haddon. Much of the contents of the book has already appeared in Dr. Hutton's vol. i, part iiib, of the Census of India, 1931.

Instead of following the usual system of entry in alphabetical sequence, the author has selected, by request, seven out of sixteen primitive tribes for description in vol. i. The reason given for selecting these tribes for precedence is the rapid disappearance of primitive culture owing to outside influence. It is, however, to be hoped that when these sixteen tribes have been dealt with, the rest of the population will be described similarly, and an alphabetical reference provided for the complete work, to facilitate the investigations of scholars.

The work has been carefully done and furnishes a very valuable record of the practices of these primitive people. There is, of course, to be noted as usual a strong resemblance to the early tribes of other parts of India. The system of exogamy by *illoms*, though clearly not now totemistic, is in some respects suggestive of an earlier totemistic organization. Of particular interest are the tables of kinship terms, which are of a very elaborate nature. The description (p. 104) of the precautions taken against the husband's evil fortune after childbirth in the case of the Malapantaram throws some new light on the *couvade*, the reason for which is involved in so much uncertainty and speculation. The work is furnished

with a map giving the tribal distribution, and many illustrations, showing typical features.

The author is to be warmly congratulated on filling so satisfactorily a blank in the ethnographic survey of India. He would, however, have been well advised, in view of the widespread appeal of a work of this nature, to avoid quoting Malayālam in the text, and more care might with advantage have been given to eliminating misprints, which even appear in the *errata*.

B. 122.

R. E. ENTHOVEN.

TWO LAMAISTIC PANTHEONS : FROM MATERIALS COLLECTED
BY THE LATE BARON A. VON STAËL HOLSTEIN. (Harvard
Yenching Institute—Monograph Series, vols. iii–iv.)
10 $\frac{1}{4}$ × 6 $\frac{3}{4}$. Vol. i, pp. xxiv + 169 ; vol. ii, pls. 314.
Cambridge, Mass. : Harvard University Press, 1937.
2 vols., 42s.

This is a most useful manual of Tibetan iconography. Besides the materials already known, like the five hundred gods of sNart'añ and the Pantheon edited by Oldenburg, the book contains new documents chiefly collected by the late Baron A. von Staël Holstein. These iconographic documents consist of a series of statues found in the Pao-hsiang Lou, a Lamaist temple situated in the garden of Tz'u ning palace in the forbidden city at Peiping ; this pantheon originally included 787 images.

These materials are very interesting, because of each deity represented the name is given either in Chinese or in Tibetan, or both in Chinese and in Tibetan ; to these languages, in some cases—as in the case of the Pao-hsiang Lou pantheon—even Mongolian and Manchu are added.

The materials so collected have been carefully catalogued by the editor, who has added most interesting indices in Sanskrit, Chinese and Tibetan, the Sanskrit names being carefully restored with the help of the other two languages.

As is known, these pantheons are, as a rule, taken from some collections of *Sādhanas* (*sGrub T'abs*) in which the formulae of meditation of the various gods were contained. These collections modelled upon the Sanskrit *Sādhanamālā*, but different in size and importance, are very numerous in Tibetan literature. Each school has its own: the bKa' rgyud pa chiefly refer to that of Padma dkar po, called *sGrub pa t'abs rgya mts'o i c'o ga rjes gnañ dañ bcas pa qđod dgui dpal gter*.

The Sa skyā pa have the most famous and the largest collection of *Sādhana*, I mean the *sGrub t'abs rgya mts'o*. It consists of many volumes, and is edited in sDerge. I could not as yet find a copy of it, but I saw some volumes of it. It is this work which inspired, for instance, the painters of the chapels in the Kumbum (*sKu abum*) of Gyantze, as is clearly mentioned in the inscriptions written at the bottom of the frescoes.

A résumé of this work has been edited in Tashilumpo, and is called *sGrub t'abs rgya 'mts'o nas bšad xai lha ts'ogs rnams kyi mñon rtogs rjes gnañ c'o ga dañ bcas yig gi don agrel qđod dgui ljon śin rin po c'ei sñem*, by Nam mk'a' dpal bzan.

It is therefore difficult to ascertain which was the source which inspired the artists. The collections now published anyhow betray the influence of the "yellow" sect by the presence of Tsöñ k'a pa and the absence of the Sa skyā lamas.

The restoration of the Sanskrit names made by the editor is very accurate. Of course, there are minor details which might need revision, but they do not impair the usefulness of the work. Expressions like *mitrai lugs*, *bari lugs* (p. 5), *k'a ce pan c'en lugs* (p. 6), *jo bo lugs* (p. 7) need some elucidation; they refer to the particular method (*lugs*) of realization as expounded by some famous masters, Indian as well as Tibetan: Maitripā, the Bari Lotsāva, Śākyasrī (the great Kashmirian pñđit), Atiśa, usually called Jo bo.

Gur (p. 11) is not really *Mahākāla* but the *mgon po*, or

yidam of the Sa skyā pa. p. 12, *skal bzañ rgya mts'o* is not *Kalpabhadrasa mudrā*, but rather *Bhadrakalpasa mudrā*.

On sMe brtsegs = Ucchuṣma, I may refer to *Indo-Tibetica*, iii. Pārvatī (p. 33), is not exactly *dmag zor ma*, or, at least, the two goddesses have been assimilated, though originally different, cf. *Indo Tibetica*, iii, p. 91 ff. Instead of Paramapitṛ I should prefer to leave the Tibetan form *P'a dam pa* as it is. *P'a dam pa*, as known, was the founder of the Tingri monastery to the north of Nepal, and famous for his magical powers.

To conclude, this book represents a very important contribution to the iconography of Tibetan Buddhism.

B. 116.

GIUSEPPE TUCCI.

AN EIGHT HUNDRED YEAR OLD BOOK OF INDIAN MEDICINE
AND FORMULAS. Tr. by ELIZABETH SHARPE. $8\frac{1}{2} \times 5\frac{1}{2}$,
pp. 135. London: Luzac and Co., 1937. 6s.

Any book on Oriental medicine is of interest. But frankly Elizabeth Sharpe's translation of "An Eight Hundred Year Old Book of Indian Medicine" is one of the less valuable. After all it is not a very ancient work. Rhazes and Avicenna had already lived and died before that date.

This book is what the old Persians would call a Qarābādīn or *Pharmaceutica*. The first half, which the translator (or author) divides among parts 1 to 4, deals with diseases and their remedies; the second half (which comprises parts 5 to 8) deals with pharmacy and the preparation of therapeutic compounds. Many interesting details are found in these pages. There is, of course, an enormous amount of magic. There is also the interesting test for male impotence (p. 66). There is a direct reference to birth control (p. 68). And there are frequent signs of Arab influence, more especially in the names of drugs—*sarma* for antimony (p. 109), for instance, and *hubul ghur* for laurel (p. 126).

The book, however, is marred by several faults. In the

first place it is impossible to discover who wrote it. Was it Waghji Muni (p. 13) or not? Does A.D. 1435 (again p. 13) represent the date of its composition or only of the terminal verses? There is no index, so that it is impossible to find out all the references to any disease or to any drug. For there is no apparent system in the treatment of the subject matter. Again, many of the technical terms must be mistranslated. Syphilis (p. 46) was not known in India eight hundred years ago. Nor is it likely that the disease now known as sprue (p. 57) was then recognized as a clinical entity. And what, pray, is the disease translated so frequently as peenus (p. 94)?

The fault lies in the translation of a highly technical work being made by a person with no knowledge of the technicalities of the subject. The author disarms criticism by her frank acknowledgment of her incapacity (p. 6), so no more can be said. Nor does she seem to know any Arabic, when she writes Damal-ook-wain for Dragons' Blood (p. 124). Nor is her Latin above suspicion (p. 68). It is a pity, because at present the main sources of our knowledge of Indian Medicine are Persian expositions, such as the Firdaus-ul-Hikmat and the Liber Regius. A translation into English of Suśruta, Charaka, and even the later physicians of India, is a work which is still eagerly awaited by all historians of Arab Medicine.

A. 906.

C. ELGOOD.

CONCEPTS OF BUDDHISM. By BIMALA CHURN LAW. With a Foreword by the Most Honourable the MARQUESS OF ZETLAND. 10 x 8½, pp. xii + 104. Amsterdam: Published for the Kern Institute by H. J. Paris, 1937. 5s. 6d.

Dr. B. C. Law has written a very attractive volume dealing with eleven Buddhist concepts. Some of them are peculiarly Buddhist, such as Profession of Faith, Four Noble Truths, and the Noble Eightfold Path, and others, which are common Indian concepts, such as caste, *karma*, and *dharma*, still have a very definite Buddhist colouring. The subjects are

not taken in any intelligible order, for the author jumps from *saraṇa* to *pāramitā* and then to *jāti*, and he does not seem to find *pāramitā* earlier than the second century B.C. The other concepts treated are *jhāna*, *puggala*, *paṭicca-samuppāda*, and *nibbāna*. The author says that it has not been an easy task to handle the subject, as the main concepts of Buddhism still require very careful consideration before saying anything definitely about them. In addition to this is the fact that he seems to be unaware of any previous handlings of the subject except in English. Nevertheless he writes without perceptible confessional bias or preconceived notions, and such candour of treatment is of the highest value in the discussion of matters that still require very careful consideration.

B. 64.

E. J. THOMAS.

HISTORICAL MANUSCRIPTS COMMISSION, CEYLON. Bulletin No. 3. Tamil Documents in the Government Archives, selected and translated by MUDALIYAR C. RASANAYAGAM. 10 × 7, pp. 59, pls. 1. Colombo : Ceylon Government Press, 1937. Cents 75.

This Bulletin deals with sixty-seven Tamil letters and documents found in the Palace of Kandy in 1815. They fall into three classes, namely, correspondence of the King with (1) the Nawab of Arcot, (2) the French at Pondicherry, and (3) the British. Of the first class one, though in Tamil, is written in Arabic characters.

Of particular interest are K 64, a copy of the grant of three districts in the Island to the French, and K 33, the draft treaty with the Governor of Madras. The elaborate method of wrapping up the missives is worthy of notice (pp. 10, 12).

The editor is in error in identifying Mādduma Vedarāla alias Rājakaruṇā Rājapakṣa Gōpāla Mudiyansē with Gōpāla Kṛṣṇa Nāyakkar (p. 4). The former was a member of a well-known Muslim family of Court physicians, whose ancestors came to Ceylon from Goa on the capture of that city by the

Portuguese. He had never been in India before Śaka 1714 (p. 36); the Nāyakkar, on the other hand, had come from Madura (p. 50).

In K 19 (p. 9) "The Lord of Hajarat", if I mistake not, is a mistranslation, "hajarat," in the Tamil "asarattu", representing the Arab-Persian ḥazrat, "excellency."

On p. 2 the editor has fallen into the common error of confusing the gold fanam with the later copper coin of the name, now reckoned as equal to six cents. On p. 32 "Katu-korale" according to the Tamil should be "Katukurule", and correctly so; the word is a form of the more common "Kaṭupullē", the name of the Adigars' messengers. On p. 56 "Iddamaspana" is a mistake for "Iddamalpana", a well-known resthouse on the old road from Colombo to Kandy. And on p. 22 is not "rei corado" meant for "rei corrado", "crowned king"?

The impression of the royal lion-seal is far from clear in the reproduction of document K 64, and a better specimen of this rarity would have added to the value of the Bulletin.

These defects, however, do not detract from the value of the present work and Mudaliyar Rasanayagam is to be congratulated on his edition of these interesting documents.

H. W. CODRINGTON.

THE EARLY BUDDHIST THEORY OF MAN PERFECTED. A STUDY OF THE ARAHAN. By I. B. HORNER. $8\frac{3}{4} \times 6$, pp. 328. London: Williams and Norgate, Ltd., 1936. 12s. 6d.

In this interesting monograph Miss Horner traces the history of the "Arahan" concept from its appearance in early "Śākyan" to its great significance in monastic Buddhism, and after that through various stages of dogmatic shiftings to its gradual waning, until it gives way eventually to the Mahāyānist Bodhisattva idea which entirely superseded it in Northern Buddhism. In the course of her investigation she digresses on

many non-Buddhist uses of words which throw important sidelights on the Buddhist idea. She discusses fully the range of the latter, analysing all relevant text-passages, in the interpretation of which she exhibits a high degree of sagacity. It may be that here and there the Commentarial literature has been valued too highly and that certain other concepts have been dealt with in a somewhat unusual way: still, the general investigation yields valuable results. Mrs. Rhys Davids's theories about the origin of Śākyā and monastic Buddhism as well as her hypothesis of "becoming" have been accepted by Miss Horner throughout.

Miss Horner's observations regarding the peculiar position of the Arahan in the Milindapañha are good: here the "perfected man" appears as a social being, leading a communal existence, and does not wander any longer "like the rhinoceros". No less relevant are her remarks on the development of the Bodhisattva concept.

Two concluding chapters are only indirectly connected with the main theme, but they are valuable in so far as they contribute material to an attempted formulation of the ideal of perfection, the concrete *summum bonum* which the self-perfected striver after freedom sets before himself as the goal. The two terms discussed here are *oghatinna* (having crossed the flood) and *pāra* (the other side).

In the definition of the Arahan concept two considerable points have been well brought out by the author, viz. that the *arahan* idea is incompatible with the *anattā* doctrine, and that its emphasis lies on the achievement of perfection "here and now". And in this connection one feels, and is relieved to feel, that the important thing is not the etymology, nor the history of the origins of the term—these things are only adjuncts of monastic-philological theory: hence the word "theory" in the title—but the realization of its content as of a very significant fact of experience, viz. emancipation during one's lifetime. In this meaning we find it frequently used in the Theragāthās as a synonym of blissful enlightenment (*sambodhi*;

cf. Itivuttaka, § 47, "idh'eva sambodhim anuttaram phuse") which assures the aspirant of his emancipation not only for the rest of his earthly life but for ever and ever. As a description of the sudden flash of enlightenment coming even after a very short preparation, we meet with the word often in the "Psalms", where it surprises one how quickly and almost instantaneously this freedom of soul (*ceto-vimutti*) is won.

It is impossible here to criticize Miss Horner's treatment of some noteworthy Pāli terms which constantly puzzle the translator by their enigmatic character, such as *sakad-* and *an-āgāmī*, or *tattha-* and *antarā-parinibbāyī*: all that she says about these is very helpful. Only one short remark I should like to add about the term *pāra*, as a warning, so to speak, against finding more in it than it was intended to convey by those who used it as a word of their mother tongue. It is doubtful to me whether Miss Horner is right in seeing in *pāra* the idea of development. As far as I am aware it is originally and prominently even later meant to designate the "farther" shore, the other side, or bank of the river (see ample evidence of this on pp. 296-301). The phrase *pārangata* would thus be almost synonymous with *oghatinna* and imply a safe place where one may gain a footing for rest and comfort, thus emphasizing the stopping and ceasing from going (or having to go) farther. I doubt whether it can be proven that, as the author says (p. 284), "there was originally no identification of *pāra* with a static condition": and her quotations from the Upanishads (p. 285) rather give support to my view.

The book is written in concise and lucid English and is pleasant to read for those who know something of Indian psychology and of Pāli Buddhism, but it must be somewhat (to say the least) difficult for ordinary English readers who are not conversant with Pāli terms. Moreover, perhaps no section of applied psychology is more difficult and misleading than the semantics of expressions which are at the same time very ordinary words and highly technical terms, as e.g. *attā*, *attā*, *kamma*, *bhava* and derivatives, and *maggā*.

A HISTORY OF BRAJABULI LITERATURE. Being a study of the Vaisnava Lyric Poetry and Poets of Bengal. By SUKUMAR SEN. $9\frac{3}{4} \times 6\frac{3}{4}$, pp. xvi + 600, ills. 2. Calcutta : University of Calcutta, 1935.

This is a valuable and scholarly treatment of the Vaisnava lyric poetry of Bengal, the greater part of which is composed in the literary dialect of Bengali known as Brajabuli. Brajabuli must be distinguished from Brajabhāṣā, the dialect of Hindi spoken in the neighbourhood of Mathurā. This book, after an admirably concise statement of the origin and nature of Brajabuli, gives some account of the Vaisnava anthologies and other works which have preserved the Vaisnava songs that have come down to us. There follows a discussion of the ideas underlying the lyrics, which all deal in one way or another with the Kṛṣṇa legend, and particularly with the love of Kṛṣṇa and Rādhā. The main part of the book consists of a series of brief notices of more than three hundred Vaisnava *padakartās*. In each case such biographical details as have been ascertained are given, and in most cases one or more examples of the poet's lyric verse. The notices are arranged as far as possible in chronological order. The quotations are given in a romanized transliteration, but there is an appendix giving them also in Bengali script. The latter part of the book deals with later poems in Brajabuli and such lyric poetry in Bengali as has affinities with the Brajabuli poems, and there are two chapters devoted to the development of the Rādhā-Kṛṣṇa legend and the Rādhā-Kṛṣṇa literature prior to the sixteenth century.

There is an unfortunately long list of additions and corrections, many of which deal with the diacritical marks required for the transliteration of the extracts—a notoriously difficult matter in proof correction. It is a pity that the author insists on using A.C. instead of A.D. in dates. This is surely a mere affectation; he need not be apprehensive of any one concluding from the use of A.D. that he has deserted

his ancestral religion, while his debt to Professor S. K. Chatterji would have been sufficiently obvious without this tribute of imitation.

There are of course many points raised in the book on which differences of opinion will exist. But there can be no doubt that it is a work which will be invaluable to all students of Bengali literature and of Vaisṇavism, and both the author and the University of Calcutta are to be congratulated on the production of a work based on such extensive research and presented in such a practically useful and scholarly form.

W. SUTTON PAGE.

HARIVAMŚAPURĀNA: Ein Abschnitt aus der Apabhraṃśa-Welthistorie "Mahāpurāna Tisaṭhimahāpurisa-guṇālamkāra" von Puṣpadanta. Herausg. von LUDWIG ALSDORF. Alt- u. Neu-Indische Studien, 5. 11½ × 8, pp. xii + 515, pls. 3. Hamburg: Friederichsen, de Gruyter & Co., 1936.

This volume contains in addition to the text and translation of Puṣpadanta's *Harivamśapurāna* an exhaustive introduction dealing with every aspect of the work: and I have nothing but praise for the exemplary care and thoroughness with which it has been done. The main interest is linguistic, and if occasionally I would differ in the explanation of particular words, criticism of this sort is best left to those who have specialized in the Apabhraṃśas. The literary value of the work is small, but it raises a point of general interest in its bearing on the date of Guṇādhyā's *Bṛhatkathā*, which the editor would put back to the first or second century B.C. at the latest. His arguments for this surprising conclusion are too often hypothetical to carry complete conviction, but it is fairer to defer judgment till he gives us the opportunity of considering his evidence in greater detail.

E. H. JOHNSTON.

MAHAVIRA : HIS LIFE AND TEACHINGS. By BIMALA CHURN
 LAW. $7\frac{1}{2} \times 5$, pp. viii + 114. London : Luzac & Co.,
 1937.

THE BUDDHIST CONCEPTION OF SPIRITS. (Same author and
 publishers.) Second edition, revised and enlarged.
 Law's Research Series, Pub. No. 3. $8 \times 5\frac{1}{2}$, pp. xii
 + 114. 1936.

The first of these works gives a clear and concise description of the life and teachings of the great Jain leader, so far as can be gathered from the canonical texts of the Jains and Buddhists. It should be of great help in focusing the points of dispute that still exist among modern scholars. For instance, it is generally agreed that Mahāvīra died before Buddha. Yet Charpentier in *The Cambridge History of India* denied this, and it would be all the better for sound chronology to show why he was wrong. There are two *Bhagavatī-sūtras*, and the title is only an honorific for the real names. Which of them does Dr. Law really mean ?

The term "spirits" for the subject of the second work is liable to misunderstanding. Even the term "ghosts" is not exact, for they are not discarnate spirits, but have bodies of a most unpleasant kind. Dr. Law defines "spirits" as a term for "the unhappy dead who suffer in the nether world on account of their misdeeds in a previous existence." This does not seem to distinguish those who are suffering in *niraya*. However, the whole method and treatment of the author makes the matter admirably clear. The work is a valuable exposition of a popular Indian belief as it became modified in the community of Buddhist lay people.

E. J. THOMAS.

LA SUBORDINATION DANS LA PROSE VÉDIQUE. Études sur le *Satapatha-Brāhmaṇa*, I. By ARMAND MINARD. pp. 214. Annales de l'Université de Lyon. Troisième série. Lettres. Fascicule 3. Paris : Société d'Édition *Les Belles Lettres*. 1936.

Arid as is the content of the Brāhmaṇa literature, the interest of its prose syntactically and stylistically has always commanded attention, and M. Minard's work, inspired by Professor Renou, is a worthy addition to the growing literature. This part gives an exhaustive investigation of the structure of the sentences in the *Satapatha Brāhmaṇa* introduced by *yāvat*, *yathā*, *yatra*, *yadā*, and *yadi*. The excellent plan is adopted of citing passages in full with translation, and an elaborate analysis renders it possible to add precision even to the translation of Eggeling.

No doubt the author is sometimes too critical of his predecessors. Eggeling aimed at idiomatic English, and at giving a faithful reproduction of the text, without adopting the interpretation of the commentator as to the succession or simultaneity of actions, where the text leaves either possible ; this is legitimate, for we cannot suppose that the ritual Sūtra is always a faithful guide ; the author abandons it in iv. 2. 5.6-7 (p. 22). Moreover, M. Minard takes exception (p. 154) to the certainly correct view of Delbrück that i.8.1.3 *yadā tām ativardhai* means "when I have outgrown it", and ii.4.2.4 *yadaiva yūyām kadā ca labhādhvai* "when you have found", though he admits it in x.4.3.9, and it occurs with *yatra* in xi.5.5.10, while xiv.6.9.26 is on any theory obscure. It is equally difficult to accept his criticism of Delbrück's doctrine that in *yadā* with the optative the action thereby expressed is regarded as past ; all the examples bear out Delbrück's thesis, xi.1.4.4 ; vi.8.1.10 ; xii.5.2.1-2 ; ix.3.2.5. ; vi.8.1.12. Only in ii.1.3.9 is contemporaneity *prima facie* even possible, and the real rendering is "whenever the sacrifice has turned out favourably". Delbrück was so careful a writer that any disagreement from his view needs full consideration.

M. Minard unfortunately fails to recognize the generic or indefinite use of the optative, which explains several passages which give him trouble. It is clear in xi.5.3.9 *yatra gārhapatyo 'nugacched vettā tad bhayaṁ yad atra juhvato bhavati*; the danger arises in every case in which the fire goes out. So i.2.2.4; iv.2.1.19. A good example is iv.3.1.20 *iti trayodaśam grahaṁ gr̥hṇāti yadi trayodaśam gr̥hṇīyāt*, where we are told what he does whenever he does the action indicated in the optative. The sense is quite different from the corresponding clause with an optative in the apodosis also. The same thing is to be seen in iv.4.2.17-18 *atha saṁ presyatī... iti yady agniṣṭomah syāt*. So iii.9.3.32; i.9.2.14-16; iii.8.5.10; v.5.4.26; iii.4.4.19; vi.6.4.10. In v.5.4.1 *sa yady ajān ālabheran lohita āśvino bhavati* simply means "whenever they kill goats, then that for the Aśvins is red". The same doctrine explains ii.6.2.17; iii.5.3.9; v.1.5.17; and v.5.4.33, all of which cause M. Minard needless trouble. Hence there is nothing inexplicable in iv.5.2.10 *iti yadi pumānt syād yady u strī syāt... iti yady u avijñāto garbho bhavati juhuyāt*. Where an indefinite is desired, optative¹ and indicative are equally available, and they can be used side by side, as often in Classical Sanskrit. But divergence of view on this and other details does not lessen the appreciation due for so painstaking a work of research.

A. BERRIEDALE KEITH.

SHABARA-BHĀSYA, Volume III, Adhyāyas IX-XII. Translated by GANGĀNĀTHA JHĀ. Gaekwad's Oriental Series, No. LXXIII. 9½ × 5¾, pp. xxviii + 1417-2429. Baroda: Oriental Institute, 1936. Rs. 16.

With this volume the Vice-Chancellor of the Allahabad University brings a monumental task to a successful conclusion, the translation of the *bhāsyas* and important early commentaries on the six orthodox philosophical systems of

¹ Cf. its use in clauses in comparison of which there are many examples in Minard, pp. 111-14, and see Keith, *HOS.*, xxv, 91-3.

Hinduism. As he himself says in the Introduction, " My life's work is finished, with the completion of this work. I am thankful that I have lived to complete it." Happy is the scholar who can pen such words. In this great series of translations, many of which are now difficult of access and should be republished, that one which most scholars would agree offered the greatest difficulties was reserved to the last and has perhaps profited thereby ; for the rendering, while perfectly clear in meaning, keeps more closely to the wording of the text than was the case with some of its predecessors. But this is neither the time nor the place for a critical estimate of MM. Gaṅgānāth Jhā's achievement, and the present reviewer prefers to confine himself to the expression of his gratitude for the opportunity of offering his warmest congratulation to the veteran scholar on this auspicious occasion.

A. 954.

E. H. JOHNSTON.

NĀNĀRTHASAṄGRAHA OF AJAYAPĀLA. Edited by T. R. CHINTĀMANI. Madras University Sanskrit Series No. 10. 10 × 6½, pp. xii + 114 + 28. Madras : University of Madras, 1937. Rs. 1/8.

The Madras University Sanskrit Series is busily engaged in exploiting the rich manuscript resources of South India and the editor of the present volume is one of the most assiduous workers in this field. The *Nānārthasaṅgraha* is a homonymous lexicon which is of interest as being the first existing to have adopted the alphabetical order in its presentation of material. The words beginning with each letter are grouped together, although the alphabetical arrangement is not carried through within these subsections themselves. The work is earlier than the *Ganaratnamahodadhi* (c. 1140) in which it is quoted. It is profusely quoted in a number of other lexical works too, often in readings differing materially from the present edition. Further, a considerable number of verses quoted as belonging to Ajaya do not find a place

in the present text at all. Also a fragmentary edition published by the Saṃskṛta Sāhitya Parishad, Calcutta, differs considerably in readings. We may take it, then, that a proper critical edition is still to be produced.

A. 937.

T. BURROW.

Art, Archæology, Anthropology

THE CHINESE ON THE ART OF PAINTING. Translations and Comments. By OSVALD SIRÉN. $9\frac{1}{4} \times 6$, pp. 261, pls. vii. Peiping : Henri Vetch, 1936. 13s. 6d.

It has been the author's purpose to reveal to the student the mental attitude of the Chinese towards their art of painting. As with all art, the growth of Chinese painting has its roots deep in the remote past, tapping fantastic stories and burrowing down to mythical regions.

From very early times Chinese art historians seem to have enjoyed recording their views on painting and painters, and although most of the earliest records have been lost, there still remains a mass of documents the complete translation of which would "take more than a lifetime". The selections here presented cover a period extending from Han times down to Ch'ing, with references to much earlier records.

The author, after a delightful Introduction, has divided his book into the following sections : From the Han to the T'ang Dynasty ; The Sung Period ; Ch'an Buddhism and its relation to Painting ; The Yuan Period ; The Ming Period ; The Ch'ing Period. Appendices I-IV provide translations of Chinese treatises, and there is a useful index.

Through this long period the same basic principles of painting enjoyed almost unanimous acceptance. The Six Principles are referred to by Hsieh Ho, writing at the end of the fifth century A.D., who states that they have "existed since early times". They are here rendered as : "1. Spirit Resonance (or Vibration of Vitality) and Life movement. 2. Bone Manner (Structural) use of the Brush. 3. Conform

with the Objects (to obtain) Likeness. 4. Apply the Colours according to the Characteristics. 5. Plan and Design, Place and Position (i.e. Composition). 6. To Transmit Models by Drawing." The historian says that there are very few artists " who could master them all".

As the author warns us, it is not always easy to grasp the meaning of some of the Chinese expressions, which are (as translated) often rather elusive.

The first of the Six Principles, Spirit Resonance, is defined as a " spiritual force imparting life, character, and significance to material forms ". It is widely agreed that masterpieces can be produced only in a kind of frenzy impelling the hand to work unconsciously. The moment the frenzy begins to cool the artist must cease or his work will be spoilt. The painter may even leave his picture incomplete, provided it is complete in his own consciousness, when it will carry its complete message to the beholder—if he, the beholder, have the correct response.

In the case of the painter Wu Chén (1280–1354) his attainment of the essential spiritual condition to create masterpieces seems to have required some external material assistance. Wu Chén " lived at the Plum Blossom cottage. At his window stood a stone goblet filled with resinous wine. When he got drunk he swung the brush and painted the air of the mountains, the haze, the mist and the clouds, without a flaw ". His elevated condition would seem to have induced the choice of subject.

Copying the works of early masters is considered meritorious, and even as early as the time of Ku K'ai-chih there are instructions for the guidance of students in the practice of tracing. But it is laid down that literal copying is not intended —the theme should serve as an inspiration and the copyist should put his own spirit into the work.

The chapter on the Sung Period has an essay attributed to Ching Hao, given in the form of an imaginary conversation between an old sage, disguised as a rustic, and a youthful

painter who meet in a forest. A translation in full is given in Appendix IV. This chapter also deals with the "gentleman painters", superior persons who wrote much on art, but ever conscious of their own social and academic status, would conclude a dissertation with such a remark as "But this is difficult to explain to common people". It is an extremely interesting chapter, concerned mainly with landscape painting, which reached a very high level during the Sung Period.

The author touches on the subject of philosophic and religious thought that so profoundly influenced Chinese painting and art criticism and devotes a special chapter to the philosophy of Ch'an Buddhism.

In the following, Ch'ing Period, two writers are quoted : Shên Hao and Tao-chi. Both were monks ; the first, temporarily, for he is reported to have "preferred the company of care-free idlers and beautiful women". Yet he regrets that he "was born in the world of men. What chance", says he, "have I to mount the phoenix ? I sing in vain my shepherd song for the Peach Blossom girls." Nevertheless he has an excellent opinion of himself as his writings show.

One is tempted to exceed the prescribed limits of a short review to quote many of the attractive passages in this extremely interesting work.

Chinese art critics justly insist on the close relationship between Chinese writing and painting. Modern writers refer to this and even speak of a "calligraphic style"—an expression which (to the reviewer) would seem to be rather meaningless and even an inversion, in view of the evidence that Chinese writing derives from a pictographic origin. The term "calligraphic" in this connection would seem to mean simply "line" in contradistinction to "wash". The similar quality of line in Chinese drawing and writing respectively, is due, and inevitably, to the use of the same implement for both operations and to the freedom of wrist demanded in either case for admirable performance.

Mr. Osvald Sirén is to be congratulated upon producing

such a collection of notes and translations—fascinating reading and invaluable to the student of Chinese painting. A few more illustrations would have been welcomed, especially if these could have clarified the meaning of some of the quaint technical terms used by the historians.

A. 632.

F. H. ANDREWS.

ANNUAL BIBLIOGRAPHY OF ISLAMIC ART AND ARCHÆOLOGY,
India excepted. Edited by L. A. MAYER. Vol. I, 1935.
 $9\frac{1}{2} \times 6\frac{3}{4}$, pp. iii + 64. Jerusalem : Divan Publishing
House, 1937.

This most welcome publication consists of a bibliography of all books and articles on Muslim architecture, art, and archæology that have appeared during 1935, India being excluded, for India is adequately dealt with in Vogel's work, published annually by the Kern Institute of Leyden.

The items are arranged under subjects, the chief main headings being Architecture, Topography, Fine Arts, Collections, Numismatics, Dress, Heraldry, Islamic Influences, Excavations, etc., and at the end is an index of authors whereby the publications of each may be found at once.

If one glances through this book, and notes the immense range of periodical publications over which articles on Muslim art and archæology are scattered, the usefulness of such a bibliography at once becomes apparent ; it will form an absolutely indispensable aid to all who are engaged in the study of Muslim art and archæology, and Dr. Mayer is to be congratulated for having undertaken so laborious a task.

A. 935.

K. A. C. CRESWELL.

A HITTITE GLOSSARY: WORDS OF KNOWN OR CONJECTURED MEANING WITH SUMERIAN AND AKKADIAN WORDS OCCURRING IN HITTITE TEXTS. By E. H. STURTEVANT. William Dwight Whitney Linguistic Series. Special Publication of the Linguistic Society of America. $10\frac{1}{4} \times 7$, pp. 192. Philadelphia: University of Pennsylvania, 1936.

Professor Sturtevant's Hittite Glossary has become an indispensable companion to any student of Hittite, who like the present writer has begun the subject since the literature became extensive. The errors and omissions which were noticed in the first edition have been corrected, there are more cross-references, and the whole work has been brought up to date. Furthermore, the author has had the assistance of Dr. G. Bechtel, Dr. A. Walther, and Professor A. Götze, and the book now contains some valuable original suggestions—particularly by the last-named scholar—bearing on words or passages in texts which have not yet been edited. Such suggestions are indicated by initials in parentheses.

The book is still primarily an index to the literature about Hittite words, and is not to be regarded as a lexicon. The Sumerian and Accadian words which occur in the Hittite texts are also included, but (as stated in the introduction) references to literature are given for them "only if some peculiarity of the Hittite documents makes this necessary". Such peculiarities have sometimes, however, been overlooked, and one could still wish for fuller references here. In the additions and corrections at the end the letter *p* appears twice as *fr* and once as *fi*; the only other misprint I have noted is s.v. *sessar*: for 187 read 184, fn. 1. But these are insignificant details in a work which seems likely to justify fully the author's modest hope that it will be of service for more than five years.

Cuneiform

LA LÉGENDE DE KERET, Roi des Sidoniens. Publiée d'après une tablette de Ras-Shamra. Par CHARLES VIROLLEAUD. Haut-Commissariat de la République Française en Syrie et au Liban, Service des Antiquités. Bibliothèque Archéologique et Historique, Tome XXII. Mission de Ras-Shamra, Tome II. 11 × 9, pp. 102, pls. 4. Paris : Geuthner, 1936. Frs. 90.

The Legend of Keret, discovered some three years ago on cuneiform tablets unearthed at Ras Shamra, is a long poem telling of a war anciently fought in the south of Palestine between Keret, king of the Sidonians, and a horde of invading peoples headed by a certain Terach.

Keret is the eponymous ancestor of the Cherethites mentioned in the Old Testament. In 1 Samuel xxx, 14, they are said to have occupied the Negeb, or Southland. Terach, on the other hand, seems to connect with Terach, the father of Abraham, in the Biblical account. In the Ras Shamra story he is a semi-divine character, his name being related to the common Semitic word *y-r-h* "moon". He has as wife and mistress the goddesses Nikkar (i.e. Nin-Gal) and Sin respectively. These correspond to the deities Nin-Gal and Sin (the latter feminized !) worshipped especially in Ur and Harran, and this fact, as M. Viroilleaud acutely points out, harmonizes with the Biblical saga which places the provenance of Terach in precisely those two cities !

There is also mention in this text of two peoples called Asher and Zebulun, in whom we may see prototypes of the Palestinian tribes later absorbed into the federation of Israel. There are likewise references to Edom.

The importance of the text can thus scarcely be exaggerated. M. Viroilleaud has edited it with his usual care and skill, and has been especially happy in his identification of many obscure words and passages. At the end of the volume he gives us his

own beautiful facsimile of the tablet, together with a photograph of the original and a glossary. Obviously this is a pioneer effort, and there are a number of points which will require correction and amplification in future.

I would suggest more particularly that *bt hbr* ("parliament") in l. 82 equates with Biblical **בֵּית דְּאָסָפִים**, that

hpst in l. 112 is equivalent to Arabic حَسْفٌ "glean" (cf. Ethiopic *h-b-z* and *h-z-b* "gather", etc.), that *zgt* (of a dog's barking) in l. 122 stands for **zgdt* and equates with Arabic غَدْرٌ, that *klb spr* ("a dog going round": As. *sapāru*) in l. 123 may be explained from Ps. lix, 7, that *'bd lm* ("a perpetual slave") can be interpreted from Deut. xv, 17, 1 Samuel xxvii, 12, etc., and that *šrml* (name of a metal) in l. 148 is an Anatolian word meaning "metal of Š-r-m/Salamis in Cyprus", i.e. copper (the *-l* is the Asianic gen. sing. suffix, cf. *barzel* "iron" and Georgian *beredj*). In l. 93, the hosts of the army are likened to *yr*. This is the Hebrew *yoreh* "early rain"; for parallels see Tallquist, *Hakedem*, i, 13. The meaning is that they are countless as raindrops.

It would be idle to suppose that the present *editio princeps* is final and definitive. Much has still to be done in interpreting this text, and its relationship to Israelitic saga. Indeed, Professor Albright has already published an alternative interpretation in the *Bulletin of the American Schools of Oriental Research*, October, 1936, in which he dissents entirely from the view of Viroalleaud. Nevertheless, this does not detract from the value of an edition distinguished for its meticulous care and its wealth of ingenuity.

Biblical Archæology

EXCAVATIONS AT SEPPHORIS, PALESTINE, IN 1931. PRELIMINARY REPORT. Ed. LEROY WATERMAN. University of Michigan Publications. $10\frac{3}{4} \times 8$, pp. xii + 86, pls. 30, figs. 6. Ann Arbor: University of Michigan Press, 1937. \$2.

Sepphoris is first mentioned by Josephus, according to whom it was a place of considerable importance in 100 B.C. It may, therefore, be supposed that its existence goes back a century or so before that time, for which a coin list going back to Seleucus IV (187-175) is some evidence. From the first century B.C. to the sixth century A.D. its history can be traced in literary sources, and this has been well outlined in the present report by S. Yeivin in the section on History and Archæology. But this writer's efforts to deduce a pre-exilic origin for the town is singularly unconvincing. It is based on the discovery of a solitary Early Iron Age II sherd in a cistern, and on the strength of this a Jewish tradition which might suggest an ancient origin for the place is said to acquire "strong confirmation". Such use of archæological evidence cannot be too much deplored.

It must in fact be admitted that the excavations have thrown hardly any light on the history of the town. This is not surprising in view of the excavator's statement that "Sepphoris, like all large and important sites that have been extensively built over in the Hellenistic and Romano-Byzantine periods, shows practically no stratification". This is a completely erroneous statement, for though the stratification may be difficult of interpretation, it undoubtedly exists in such places, and unless it is recorded, the excavation does far more harm than good. Similarly, it is quite inadequate to describe pottery as Hellenistic—first century A.D.

The buildings uncovered by the excavation were a theatre, a building identified as a Christian Basilica, and one beneath the modern citadel. The theatre was apparently on the normal

classical Roman plan, except that there were no stage buildings behind the *scænæ frons*. The writer of the section on Architecture and Topography does not seem to be very clear on the difference between a Roman and a Greek theatre, as in the classical Roman theatre, the performance never took place in the orchestra. A dating during the period either of Herod the Great or Herod Antipas (the two writers do not seem to be in agreement) is suggested, but no architectural or archæological evidence is adduced. Likewise, no evidence is adduced for the identification of the Christian Basilica. On plan it looks considerably more like an irregularly built atrium house, and the fact that its floors were sunk a foot or so into the rock, cannot be taken as evidence that it was a place where "rites were practised in secret". However, it is not possible to be dogmatic about the plan, as early Christian Churches varied considerably.

It is possible that some of these shortcomings will be remedied in a fuller report, which, as this is a preliminary report, is presumably forthcoming. But since such a long interval has elapsed since the excavations, without a continuation which is implied, it is possible that the idea has been abandoned. If, however, excavations are to be continued, it is earnestly to be hoped that the excavators will not be so convinced that no stratification exists on this site.

PATROLOGIAE CURSUS COMPLETUS ACCURANTE I-P. MIGNE
SERIES GRAECA. Index Locupletissimus. THEODORUS
HOPFNER. Tomus I. 11 × 7½, pp. 541. Paris: Paul
Geuthner, 1928. Frs. 300.

We gather from the preface that this part of Dr. Hopfner's work was printed in 1928, but the publisher's outer cover is dated 1934. All students of Greek Patristics will be under a debt to the professor of Classical Philology at Prag for furnishing them with what will prove an indispensable aid to Migne's

Patrologia, since the similar work published in Modern Greek at Athens, 1879, is incomplete, and now rarely to be met with. Not only does Dr. Hopfner analyse the contents of the patristic treatises themselves but he gives some account of the dissertations by Migne and his collaborators which precede them. We are still dependent on Migne for many of the authors not specially edited by others ; and a full index like the present one will help the student in any branch of Christian theology and cognate subjects to find his way about that stupendous undertaking. The volume of the Index before us contains over five hundred pages of closely-printed double columns, and by its format and freedom from misprints does great credit to the printers at Louvain. When completed the work will be a *κτῆμα εἰς ἀεί* ; and we look forward to the fulfilment of the professor's laborious toil.

A. W. GREENUP.

Islam

BEITRÄGE ZUR ISLAMISCHEN ATOMLEHRE. By DR. SALOMON PINES. $9\frac{1}{2} \times 6\frac{1}{2}$, pp. 149. Berlin : A. Heine for Otto Harrassowitz, 1936.

Atomic theory has a basic importance in the *kalām* of *al-Ash'ariyya*, which is the foundation of orthodox Sunnitic Islām. Until recently Abū Rashīd's *Kitāb al-masā'il*, al-Ījī's *Kitāb al-mawāqif*, and partly Ibn al-Murtadā's *Al-bahr az-zakhkhar* were our sources on this subject. With the edition of Abul-Husayn's *Kitāb al-intiṣār* by H. S. Nyberg and of *al-Ash'ari*'s *Maqālāt al-islāmiyyīn* by H. Ritter, our knowledge of the Mu'tazilite atomic theory, the basis of the atomic theory of *al-Ash'ariyya*, has been considerably extended.

The author in his book continues and completes the researches of O. Pretzl (see *Der Islam*, xix, 1931, pp. 117-130) into the early Islāmic atomic theory. In the first part of his book he expounds the atomic systems of such prominent *mutakallimūn* as Abū Rashīd, Abul-Hudhayl, Mu'ammar,

Hishām al-Fuwaṭī, Abū Hāshim, Nazzām, Ibn Ḥazm, and others, dwelling on their views on atomic terminology, the relation between atom and body, the composition of atoms, the possibility of their touching each other, the proofs of the existence of atoms, their qualities, and the problem of causality.

In the second part of his book the author confronts the atomic system of ar-Rāzī, according to which the three principles of matter, space, and time are co-eternal with God, with the criticism of Nāṣir-i-Khusraw on and the objections of Īrānshahrī to this doctrine. The author derives ar-Rāzī's atomic theory from the teaching of the Harrānians as well as Platonic and Aristotelian philosophy. After comparing ar-Rāzī's system to that of the *kalām* he demonstrates how Platonic "physical tradition" survives in later Islāmic philosophy, and draws up a catalogue of ar-Rāzī's works.

In the third part of his book the author accounts for the Greek—Democritic and Epicurean—origin of the atomic theory of the *kalām* and reviews the different Indian atomic systems, making conjectures on their possible connections with the *kalām*. In an appendix he dwells on the relation of Jahm ibn Ṣafwān, a determinist philosopher, to the early *Mu'tazila*.

S. Pines' book is a valuable contribution to the history of Islāmic philosophy. Atomic theory is a domain on which recently few Orientalists have worked. With its constant references to the Greek philosophical systems, the book is of good use also for classical scholars and philosophers who are desirous of studying the survival of Greek philosophical notions and systems in Islām.

ARABIC GRAMMAR: Inductive Method. By E. E. ELDER.
 The American University at Cairo: Oriental Studies.
 $9\frac{3}{4} \times 6\frac{1}{2}$, pp. xviii + 352. Cairo: American University
 at Cairo, 1937. 8s.

There is in this work a laudable attempt to simplify the task of learning Arabic, more especially modern literary Arabic. The principle adopted is that of the "inductive" method, by which the classical language is treated as a living, spoken tongue. Declensions and paradigms are abolished, and the grammar is based on numbers of illustrative sentences colloquially phrased, but in the words of the classical usage. In the present work the distinction between classical and colloquial has not always been maintained, and the results are apt to be confusing, as in the following instances:—

أليس عند التاجر حاجات كثيرة في الدكان، كان : p. 20
 عند خليل بضاعة من كل صنف مندستة ولكن ليس الآن،

Translated: "Doesn't the merchant have many things in the shop? Khalil had merchandise of every sort a year ago, but not now."

هل يا ترى لأن الطبيب ماهر p. 28:

Translated: "I wonder, is that because the doctor is clever?"

This is not classical Arabic, nor would it be understood very well by persons not familiar with the Egyptian dialect.

The plan of the work makes it necessary for the learner to work with a teacher who will explain difficulties as they arise, and also provide a vocabulary or have a dictionary at hand. But with the present system the teacher may have to go to other sources to obtain his explanations (incidentally, no index is provided here), and also, seeing that his presence is assumed, it appears unnecessary to have reverted to the Arabic terminology in the grammar. مصادر is not more

illuminating than "Imperfect"—in fact it is less so—nor
نَصْبٌ than "Accusative".

The passages for reading are well chosen, and here the author has provided something really useful. On the whole the selections are free from misprints, those prime stumbling-blocks in the beginner's way, but the following corrections should be made in the text :—

p. 138. For المَوْتِ read الموت

„ رَوْحٌ „ رَوْحٌ

p. 168 تَهْدِي لِهِمَا „ تَهْدِي لِهِمَا „

p. 194 بَنْج „ بَنْج

p. 196 سَبْعَةَ عَشْرَ „ سَبْعَةَ

and the following in the translations :—

p. 139. For "The king was perplexed at his command" read "about what he should do" (فِي أَمْرِهِ).

p. 293. For "which is expected to be limited" read "renewed" (المنظر تجدیده).

These remarks may well end as they began, with praise for the author's endeavour. It cannot be yet said, however, that the ideal method for reducing the labour of learning classical Arabic has been evolved, and it is clear that to read the *Aghānī* or *Tabarī* the grammars of Wright and others of the older school will still be necessary.

THE QUR'ĀN : TRANSLATED WITH A CRITICAL RE-ARRANGEMENT OF THE SURAHS. By RICHARD BELL. Vol. I. 8 $\frac{3}{4}$ x 6 ; pp. xii + 343. Edinburgh, 1937. T. and T. Clark. 12s. 6d.

This is the first volume of a work which marks a new beginning in our study of the Qur'ān. In 1860, the publication of Nöldeke's *Geschichte des Qorans* provided for the first time a really scientific basis for study of the Scripture of Islām, and all critical work on it since then, outside mere textual work, has started from that basis. The studies of Hirschfeld, Horovitz, Barth, Bauer, Schwally and Grimme are all dependent on the results won by Nöldeke. In like manner future studies of the Qur'ān are bound to start from the work of Dr. Bell in this new translation.

Its title is perhaps a little misleading, for many may be led to think that it is merely another version on the style of Rodwell, with the Sūras re-arranged in some sort of chronological order. The Sūras, however, follow the usual order in which they come in the text of the Qur'ān, the re-arrangement being within the Sūras themselves. This needs a little explanation to make it clear to the reader who is not an expert in Qur'ānic matters.

It is well known, and was well known to the Muslim commentators, that in the individual Sūras there was material from various periods of the Prophet's activity. The rubrics to the Sūras tell us whether the Sūra was held to come from the Meccan or from the Madīnan period of the Prophet's life, but it was well known that in Sūras marked as Meccan there was often Madīnan material, and vice versa. The Muslim savants had even discovered little peculiarities of phraseology which they held could be used to distinguish Meccan from Madīnan material. To the Western scholar the matter did not end there. The Prophet had been giving forth his revelations during some twenty odd years of his public ministry, and it was obvious that his thought had developed much

during that period, and even more obvious that his style had changed, on which grounds Nöldeke had worked out a scheme of Early Meccan, Middle Meccan, Late Meccan, and Madīnan material, which could be fairly readily distinguished. Careful reading of the text, however, reveals that even this is not sufficient. Changes in rhyme, abrupt breaks in the sense of passages, sudden changes in the subject, make it clear that individual Sūras as we have them have been pieced together from fragments of revelation material coming from the most diverse periods and situations.

Dr. Bell has sought to separate these out, and by the use of spacing, arrangement in columns, and such devices, show us the make up of the Sūras and to some extent their development. The work suffers from the great disadvantage that problems of cost of production made it impossible for him to print his extensive notes, which explain the grounds for his divisions and interpretations, but by little rubrics and occasional footnotes he is able to give some guidance and at least make his system intelligible.

It is his conviction that the Prophet, contrary to almost universal Muslim belief, was able to read and write, and that he himself was busy before his death in preparation of material for a book of Scripture for his community. We can perhaps divide up the Prophet's prophetic activity into three periods, a *kāhin* period, when he was uttering short, pregnant gnomic deliverances much in the style of the soothsayers of ancient Arabia ; a *Qur'ān* period, when under the influence of the People of the Book, he was setting forth his revelations very much as the Scripture lessons he had heard among the People of the Book ; and a *Kitāb* period, when he had grasped the fact that a Prophet was not only a preacher but a legislator, and had a Scripture for the direction of his community. For the preparation of this *Kitāb* Dr. Bell believes he gathered together the material available of his earlier pronouncements, revised it, corrected it, added to it, revised it again perhaps, amended it to suit his more advanced views, polished it up

stylistically, worked it over to fit it in with new material he wanted to use, and thus made ready for the issuing of his book. He was cut off, however, before it was done, and this material had to be published by his early followers.

Now in those days writing material was not as plentiful as it is now, and it would often happen that he would have to use the back of scraps of discarded material, and for lengthy pieces might even have to use the backs of several pieces of used papyrus of different date and origin. A revised version of a revelation might often be written on the back of a first draft, or a substitution on the back of the piece for which it was substituted. Corrections might be written interlinear, or in the margin, or on the back. All this material, the final forms as well as one or two, or even more, preliminary drafts, the discarded pieces as well as the polished final product, the scraps of varied origin, would have been in the Prophet's collection when he died. The followers who edited the volume, Dr. Bell thinks, carefully arranged all this material and published it, being careful above all to omit no scrap of material that was there. Thus they included the discarded with the final form, the unrevised with the revised, copied in all the alterations and marginal annotations, and where a revelation had been written on the back of a used piece of papyrus, they would copy the one side after the other, even when the pieces of revelation had no connection whatever with one another. In this latter case, if it happened that for a longer passage than usual several scraps of papyrus were needed, all of which had already writing on the other side, we may find this long piece followed by a number of short disconnected pieces, since they wrote in what was on the backs immediately after the passage itself, or we may find the connected piece broken up by disconnected pieces, since they wrote in the writing on the back of each piece as they finished with it.

By typographical devices it is possible in Dr. Bell's pages to bring together the pieces in a Sūra that belong together,

and separate out the pieces that are extraneous, and indeed, by little notes it is even possible to suggest where some of these disconnected pieces may have originally belonged. The great difficulty is the assigning of relative dates to the passages. Where they are fairly long passages it is possible to consider what period of the Prophet's activity they best fit, but when they are short scraps, stylistic criteria are often very difficult to apply, even according to the scheme worked out by Nöldeke, and only rarely are there clear allusions that enable them to be dated as associated with known incidents in the Prophet's career. The Commentaries often state the occasion of the revelation of passages, but the longer one works at the Commentaries the less one is inclined to lean upon them for support. Moreover, they have the distressing habit of telling us that the occasion was this, or that, or the other, leaving us to choose among the various possibilities they suggest, so that we are back in our original uncertainty.

The chief objection that will be raised against Dr. Bell's work is that his distribution is so subjective. Had it been possible for him to have published his lengthy notes, much of this sense of subjectivity might have been removed, for with the grounds of his judgment before us it might be apparent that there are certain guiding principles which work so consistently that they may be relied upon. As it is we have the sense that he has divided up a passage because it seems to him to be a composite, whereas to us it may seem that the connection is sufficiently close for the passage to be claimed as a unity. This is particularly the case where he separated out little phrases that have the appearances of glosses or expansions of a statement, and considers them as later workings over of an original passage. But even in one's own day one knows of people whose natural style has that peculiarity that they will make a statement and in the next breath add a little explanatory phrase, or say the same thing over again in a somewhat expanded form. A speaker will often do this, and one feels that in many such cases in the text of the Qur'ān

the passage may not be an expanded form worked over by the Prophet on a written original, but may have come thus from his lips. Of course, there are cases enough where the use of later phraseology or more advanced conceptions clearly marks out emendation of an early passage.

The question in the reviewer's mind, however, even in cases where there is undoubtedly emendation, is whether this is due to the Prophet, and not to the compilers of our text. A good case is Sūra XX, 130, where to the most casual reader of the Arabic text it is obvious that the verse originally read "and give glory with the praise of thy Lord before the rising of the sun and before its setting, mayhap thou wilt be satisfied". This is in accordance with the original practice of two prayer times only. The verse as we have it has been patched so as to get in the five times of prayer, and to the reviewer, at least, it looks very much as though this piece of revelation material came to the compilers from some pious member of the community, who knew that five times of prayer had been decreed, and tried to get them all into this passage he had. It is a little difficult to think the Prophet himself would have left so ugly and awkward a passage, though, of course, Dr. Bell can reply that this was only a draft of his, and had he lived to complete his *Kitāb* a properly polished passage would have been provided.

Dr. Bell is convinced that the text as we have it is as the Prophet himself had been working at it, but it may be questioned whether we should not have precisely the same result if we accept the orthodox theory that the compilation of the Qur'ān was done after the Prophet's death by his Companions, who called for all who had pieces of revelation material, and then pieced together as best they could the material that came to them from bits of papyrus, shoulder blades of camels, white stones, and from the breasts of men. There is such early and unanimous tradition that when the Prophet died there was no revelation yet available, so that it had to be gathered, that it is difficult to believe that the

Prophet himself had assembled all this material, and yet it was never heard of till later tendential tradition produces the idea that he and Gabriel collated it every year once. This question deserves further exploration.

What Dr. Bell has done for us, however, is to make the Qur'ān for the first time an intelligible book, and that in itself is a strong argument in favour of the substantial validity of his method. Very many non-Arabists will bear witness to the fact that it is an extremely difficult book to read with any interest when one reads it even in Rodwell's translation, which does attempt to set it in some sort of chronological sequence. Arranged as it is in this new version, however, one can read it with interest, and find it intelligible. Probably the ideal thing would have been to completely re-arrange it, paying no attention whatever to the present Sūra grouping of the material, but putting together what naturally belongs together. For practical purposes such an arrangement is not possible, and it would necessarily bring in even more of the subjective element than that which many will object to in Dr. Bell's arrangement. Moreover, it would not do what this arrangement does, show us how the book as we have it was built up out of its elements, whether those elements were the material gathered by the Prophet and worked over by him for his *Kitāb*, or the fragments of revelation assembled by 'Uthmān's commission, and woven together by them to the best of their ability into a Scripture for the community.

A word must be said on the translation itself. Professor Fischer of Leipzig has recently pointed out the serious inadequacies of previous translations (*Der Wert der vorhandenen Koran-Übersetzungen*, in the *Berichte* of the Saxon Academy, 1937, Heft 2), and it must be admitted that Muslims are not entirely without justification for their resentment at their Scripture having suffered so much from its translators. Particularly in recent years have we been feeling the inadequacy of the earlier translations, which too often were content to set forth what orthodox Islām says the verses of

such and such a passage meant, without inquiring what the passage must have meant to the Prophet when he set it forth. Dr. Bell has attempted this latter task and, while keeping himself aware of what the standard Commentaries have to say on the matter, has always made an independent attempt to get back to what was in the mind of the Prophet himself. Thus, even where further investigation may decide that his translation of a particular passage is wrong, his work has the present merit of providing us with a starting point for such investigations, and much illuminative suggestion as to the thought world in which the Prophet moved.

The first volume of this translation, which is now before us, contains Sūras I-XXIV ; the second volume, containing from Sūra XXV to the end of the Qur'ān, and thus dealing with the Prophet's earlier pronouncements, will be eagerly awaited.

B. 73.

ARTHUR JEFFERY.

MOHAMMED THE MAN AND HIS FAITH. By TOR ANDRAE.

Translated by T. MENZEL. $8 \times 5\frac{3}{4}$, pp. 274, ill. 1.

London : George Allen and Unwin, 1936. 8s. 6d.

It is good to have Professor Andrae's book in English. The translation reads well though there is one bad mistake (*Yemama*, not *Yemen*, was the scene of Musailimah's activity), and in places the German system of transliteration has been kept. The author dissects the character of Muhammad in the light gained from the study of other religious geniuses. His conclusions are these. *Muhammad*, not being an original thinker, took the main subjects of his preaching from the missionaries of the eastern church, the goodness of God as revealed in his creation, the duty of man, and the judgment. He had heard such addresses, and the ideas lay dormant till he came out as the messenger of God. His theory of revelation, that God gave the same revelation to all nations with minor differences suited to their special circumstances, is like that of several sects, of which the last was the Manichees, from

whom he derived it. It is abnormal for a mystic to make no reference to the event which made him what he became, so the story that Gabriel took Muḥammad by the throat and commanded him to "Recite" is an invention to explain *Sura* 96. His call was the vision mentioned in *Suras* 81 and 53. The author does not try to explain why the first revelation was visual when all the others were auditory. One feels that too much stress is laid on the idea that death is followed by sleep in the grave; had Muḥammad taught this consciously, it would have made more impression on his followers.

A. S. TRITTON.

L'ORNEMENT DES ÂMES ET LA DEVISE DES HABITANTS D'EL-ANDALUS : TRAITÉ DE GUERRE SAINTE ISLAMIQUE.

Par 'ALY BEN 'ABDER RAHMAN BEN HODEIL EL ANDALUSY. REPRODUCTION DU MANUSCRIT DE M. NEHLIL, REVU ET CORRIGÉ. Par LOUIS MERCIER. 11 × 8, pp. 8 + 99. Paris: Paul Geuthner, 1936. Frs. 40.

The text here reproduced in an elegant Maghribī script is the first volume of a work of which the second had previously been edited by M. Mercier with the title *La Parure des Cavaliers*. In an Arabic preface the editor furnishes such details as he has been able to discover about the author and his literary activity. This latter appears to have terminated in A.D. 1399 not long before the end of Muslim rule in Spain.

Since the author regards the *jihād*, i.e. war against all non-Muslims, as a religious duty, his work is far more homiletic and theological than a treatise on either strategy or tactics. Indeed in the first half there would seem to be only two paragraphs of any importance dealing with such matters; in one of these he states reasons for employing Jews or Christians rather than Muslims as spies; in the other he describes the organization of a Muslim army (of only 5,000 men) with the names of the officers and their flags. Since

the unit is of eight men, such a body would resemble a Spartan army, all commanders of commanders.

We seem to be promised some further information about war in the title of chapter 17, "Description of war, its management, and the use of craft therein," but here too there are pages of platitudes and edifying stories before we come to anything which might be thought a serious contribution to the subject. The first suggestion here is that the Muslim commander should endeavour to corrupt the hostile officers and render them suspect to their troops by various forgeries and the discharge of arrows to which papers containing false information are attached. This is followed by a precept that the best fighters should be placed at the centre and not at the flanks, and then by anecdotes which indicate that good fighters were rare in both the Muslim and the Christian armies of the peninsula. One Christian commander won a great victory because he had eight men of this quality, whereas his Muslim opponent had only seven; on another occasion when a vizier had given offence to his sovereign by denying that there were as many as fifty fighters in an army of many thousands, it turned out that there was only one. Some tactical suggestions are then cited from *Turṭūshi*.

In addition to his Arabic preface the editor has given eleven pages of corrections of the text, which certainly help the reader. He also promises a French translation.

D. S. MARGOLIOUTH.

Miscellaneous

DIE OASE SIWA UND IHRE MUSIK. Inaugural-Dissertation zur Erlangung der Doktorwürde. By BRIGITTE SCHIFFER. 8 x 6, pp. iv + 114 (96 letterpress + 18 music), ills. 16. Bottrop i. Westfalen, Wilhelm Postberg, 1936.

This famous oasis in the Libyan Desert has long interested archæologists on account of the oracle temple of Jupiter Ammon, but ethnologists have rather neglected it. Indeed, the present writer only knows of two workers in this field of

research, viz. Maḥmūd Muḥammad ‘Abdallāh in *Harvard African Studies*, i, and Bricchetti-Robechi in the *Archivo per l'antropologia e etnologia*, 1887, and *Bulletino della Società geog. ital.*, 1889. The work of Dr. Brigitte Schiffer is therefore very welcome, not only because it is the first attempt to deal with the music of these Berbers, who have rather different customs from their brethren elsewhere, but because a third of the book is taken up by a really valuable contribution to ethnology in the domain of ornament.

The author describes instrumental music as performed by means of clappers, tambourine, drum, and flute, and with the latter we are given the precise measurements of the vents, which enable us to determine two very interesting pentatonic scales. Siwan vocal music is also discussed, the antiphonal form being especially interesting, although its social significance is not recognized. Of greater importance is the author's analysis of the gamut and form of the music, whilst the examples of the music itself, together with the words of the songs, and a very complete description of each item, makes this small book a most valuable addition to our literature of the music of the Berber people.

The only criticism that I feel inclined to offer is that the music plates ought to have been printed rather than reproduced from the author's handwriting which, having been reduced, is so microscopic that it is quite a strain on the eyes to read.

HENRY G. FARMER.

THE Book of TRUTHFULNESS (*KITĀB AL-SIDQ*) by ABŪ SA‘ID AL-KHARRĀZ. Edited and translated by A. J. ARBERERY. Islamic Research Association No. 6. $8\frac{1}{2} \times 5\frac{1}{4}$, pp. vii + 70 + 83. London: Humphrey Milford, Oxford University Press, 1937.

The *Kitāb al-Sidq* is the work of al-Kharrāz, one of the earliest of the Sūfi mystics—though if A.H. 286 is accepted as the date of his death, he could hardly have been an associate

of Bishr ibn al-Hārith, as stated in the Preface, since Bishr died nearly sixty years before. The sayings of al-Kharrāz are well known to all students of Sūfism, and this translation and edition of a work hitherto unpublished is therefore very welcome, the more so as the author here gives a concise and systematic account of Sūfi experience, based on the principles which are developed by most of the later writers on Sūfism.

The title might be better translated as *The Book of Truth* or *Sincerity*, as *Truthfulness* seems an inappropriate word to use in connection with patience, knowledge, godliness, abstinence, etc. *Sincerity* would more accurately express the meaning in most cases.

There is little doubt that al-Kharrāz had made a study of the work of his great predecessor al-Muḥāsibī, whose pupil he may have been, since both belonged to the Baghdād school of Sūfism, and he reproduces much of the earlier Sūfi's teaching, especially in regard to patience, repentance, self-knowledge, gratitude, and intimacy, or fellowship, with God. Sometimes al-Kharrāz actually quotes al-Muḥāsibī's words, but he gives a much more concise and readable account of his experience, showing clearly how the seeker after God passes through the preliminary stage of purgative asceticism until he reaches the stage of illumination, and thence passes on to the unitive life in God.

The translation reads very smoothly on the whole : " bewares " is a strange form for this verb to take (p. 23), and the creature can hardly be said to be " ashamed of " his Creator ; the meaning is rather " abashed before " Him (p. 35).

The 'Āmir b. 'Abdallāh whose saying is quoted on p. 48 might well be 'Āmir b. 'Abdallāh b. Qays (ob. 103) of whose sayings Sha'rānī gives several similar examples (*Tab.*, i, 24). " al-Banānī " (p. 55) should be " al-Bunānī ".

The book has been well produced by the Oxford University Press and the Arabic text is very clearly printed. All students of Sūfism will be grateful to Dr. Arberry for this valuable and most interesting addition to the literature of their subject.

THE MANDAEANS OF 'IRĀQ AND ĪRĀN. THEIR CULTS, CUSTOMS, MAGIC LEGENDS, AND FOLKLORE. By E. S. DROWER ("E. S. STEVENS"). $9\frac{1}{4} \times 6$, pp. xxv + 436, pls. 29, figs. 16. Oxford : Clarendon Press, 1937. 25s.

In a prefatory note to this book, Mrs. E. S. Drower mentions that she has been assisted in the publication by two learned bodies, the Royal Asiatic Society and the Hibbert Trustees ; that she has received much help from Professor D. S. Margoliouth ; and that without the constant encouragement and interest of Dr. Moses Gaster, to whom the book is dedicated, the work might never have reached completion.

The author has worked in a field which has presented great difficulties to the explorer, because the Mandaeans claim to possess secret knowledge, and only a few of their sacred writings have been published. Some of these difficulties she has to a large extent overcome by personal experience, extending over a number of years, of their customs, beliefs, cults, and magic. The cults, regarded by the Mandaeans as older and more sacred than their books, have been retained with great tenacity. Their ritual, in all its details, has been preserved most carefully by a priesthood who regard a slip in procedure as a deadly sin. Before the coming of Islām their environment was one which brought them into touch with Sumerian, Babylonian, Egyptian, and Zoroastrian beliefs and rituals. Since the coming of Islām, they have been segregated from those amongst whom they dwell by what have become peculiarities of cult, custom, language, and religion. In this way, whatever their early culture-contacts may have been, the Mandaeans have for some centuries kept intact and inviolate the heritage which they received from their fathers.

Not every inquirer has been permitted to see and hear what the author has seen and heard among the Mandaeans of 'Irāq and īrān, not every inquirer is qualified to interpret correctly what has been seen and heard. Mrs. Drower has been enabled not only to collect a vast amount of new information, but

also by her trained power of observation and her knowledge of kindred rites and ceremonies in other religions to interpret it in a way that merits very careful consideration. Particularly interesting is her description of various ritual meals.

Based, as it is, upon first-hand observation and inquiry, the book is of first-rate importance for students of the history of religions, no less than for students of anthropology, ethnology, and folk-lore. Incidentally also it should be of interest to another class of students, those who wish to study the history of the arts of healing, for the importance of health and healing is a vital part of Mandaean teaching. Indeed, as Mrs. Drower says, the whole Mandaean system shows considerable knowledge of the arts of healing.

B. 21.

MAURICE A. CANNEY.

OCCIDENT AND ORIENT, BEING STUDIES IN SEMITIC PHILOLOGY AND LITERATURE, JEWISH HISTORY AND PHILOSOPHY AND FOLKLORE IN THE WIDEST SENSE IN HONOUR OF HAHAM DR. MOSES GASTER'S 80TH BIRTHDAY: GASTER ANNIVERSARY VOLUME. Edited by BRUNO SCHINDLER, Ph.D., in collaboration with A. MARMORSTEIN, Ph.D. 10 x 6, pp. xviii + 570, pls. 8. London: Taylor's Foreign Press, 1936. £3 3s.

At the reception held last year to congratulate Dr. Gaster on his eightieth birthday testimony was born to the vast variety of his attainments and achievements by representatives of governments and learned societies; while some personal friends enumerated subjects of which his mastery was not generally known. In the fifty-eight papers which constitute the first of the volumes offered to him as a *Festschrift*, many, though by no means all, of the departments of his studies are represented. The title cited above gives an adequate account of their range.

For reviewing this collection in the sense of assessing the

merits of the contributions a syndicate would be required, since many are technical in character. Several, however, are of very general interest, notably parcels of unpublished letters, such as those from Dr. Gaster to Dr. Kristeller referring to the former's utilizing his Rumanian attainments for the benefit of the Rumanian Jews at the Berlin Congress of 1878 ; those from Dr. Gaster to Prof. Bacher of Budapest, chiefly on literary matters : the former set are contributed by L. N. Gelber of Jerusalem, the latter by S. Loewinger of Budapest. A third collection of letters from L. Zunz to F. D. Mocatta, L. Green who financed some of Zunz's works, and Rabbi N. Adler, is produced by Ismar Elbogen of Berlin. In 1857 there was no chance of raising £600 in England for a Jewish literary enterprise. English Orientalists will be deeply interested in the letters from W. Wright to M. Steinschneider from 1853 to 1863, given by Alexander Marx of New York. They are a pathetic record of the struggles of perhaps the greatest of British Semitists, whom Oxford might have welcomed to its Chair of Arabic in 1861 had it not been for the fanaticism of Dr. Pusey. Neubauer once showed me a letter in which Pusey wrote to him "*utinam Christianus esses*, as then I should have voted for your appointment to the Librarianship of the Bodleian". Wright was not the only sufferer from this type of fundamentalism.

Two papers likely to interest numerous readers are concerned with the philosopher Moses Mendelssohn. One of these by S. Rawidowicz of London deals with the career, mentality, and influence of the sage, admitting that there will never be a revival of his philosophy, which at one time profoundly affected Germany and to some extent Europe. His name occurs frequently in the literature produced by the recent Goethe centenary, but perhaps is best known to the present generation of philosophers from the courteous references to him in Kant's *Kritik der reinen Vernunft* and *Prolegomena*. The paper by Bertha and Bruno Strauss of Berlin identifies the Graf Rochus Friedrich von Lynar (1708-1781), Danish

ambassador to the Swedish and Russian courts, with the *Mann von Stande* who anonymously communicated to Mendelssohn a project for establishing a Jewish state. The evidence which they adduce seems conclusive.

An obscure episode of Jewish history is brought to light by Cecil Roth of London in the paper "The Jews in Minorca under British rule". Ceded to Great Britain by the Treaty of Utrecht, between the years 1714 and 1756 and again from 1762 to 1781 it housed a flourishing Jewish community, rescued from the hideous barbarity of Spain, only to be driven from it when the island came again under that intolerant rule. Recent happenings in Spain bear out the adage that "the devil is easier to raise than to lay".

As might be expected, numerous papers deal with Biblical themes. S. Krauss of Vienna interprets the "Terror in the nights" (Canticles iii, 8), from which Solomon's bed was guarded by sixty warriors, of the danger from demons. [I think this unlikely to be right (1) because their swords would have been useless against demons, who are fought with spells and charms, (2) because assassins like Macbeth prefer to murder sleep, (3) because Solomon's fear of the midnight assassin could be paralleled from the procedure of many monarchs.] Mr. J. L. Landau finds the reason for the hostility of Ephraim to Judah in the removal of the metropolis by David from Shechem to Jerusalem. Dr. S. Daiches interprets Psalm cxvi, introducing the view of the import of "sacrifice" which he recently put before the R.A.S. Mr. H. M. J. Loewe, dealing with the Rabbinic exegesis of Isaiah liv, 13, suggests that the Talmudic emendation בונץ for the second בונץ was intended to mean not "builders", but "men of understanding" from בָנִים. Rabbi A. Kaminka offers new interpretations of some difficult texts in the Psalms; the most interesting is of Psalm cxxxvii, 9, which he renders "blessed is he that shall capture and disperse the (?) young fighting men at Selah" with reference to Amaziah's conquest of Sela, capital of Edom (II Chron. xxv, 11). This is certainly less inhuman than

"How blest shall he, that trooper, be", etc. Mr. Alexander Haggerty Krappe of Washington accepts the opinion that in Genesis i, 27, we should read "male and female created he him" for "them", involving the myth that Adam was originally androgynous, for which he adduces parallels from many mythologies. (I should not like to follow this exegesis into its theological consequence.) Mr. G. R. Driver of Oxford throws welcome light on passages of the Old Testament by showing how consonantal groups with different meanings have become confused. His results are likely to be accepted.

Post-biblical Judaism also is well represented. Prof. Gottheil of New York, whose loss we are lamenting, contributes four unpublished *Responsa* of Maimonides from the Taylor-Schechter collection in Cambridge. These from the points of view of both text and translation will reward further study. Some verses on Maimonides' *Moreh* with others by Joseph Sarphati (*ob.* 1527) are published for the first time by Umberto Cassuto of Rome. New York figures in the title of a paper by D. de Sola Pool, of that city, who traces the pedigree of Saul Brown (Pardo), first known Chazan there. Principal A. Büchler of London furnishes a profoundly learned discussion (in Hebrew) on the legal status of slaves in Palestine under Judaism. Dr. C. Duschinsky of London deals with the question whether a woman may act as slaughteress, and produces two Hebrew documents of the seventeenth century in which authorization for this purpose is granted to Italian Jewesses. Professor J. Z. Lauterbach of Cincinnati edits some hitherto unpublished parts of the *Yalkut ha-Makiri* on Hosea and Micah. He calls attention to some differences between the arrangement of this work and that of the more familiar *Yalkut Shimeoni*. The longest paper dealing with literature of this period is by R. Eisler of Unterach a. Attersee on the date and origin of Schechter's Sadoqite treatise. Dr. R. Travers Herford deals with the purpose and significance of *Pirke Abot*.

Folklore, in which Dr. Gaster has shown great interest, is the subject of several papers. One of the editors, A.

Marmorstein of London, deals with Greek and Jewish customs and popular usages, which exhibit remarkable resemblances and contrasts. He illustrates with great learning the practice of "dressing up", that of fasting, and superstitions connected with certain vegetables and colours. He is very cautious in assigning causes. Rabbi M. Grunwald of Baden bei Wien offers an erudite contribution to this subject. In cat and dog stories he attributes the partiality for the cat shown by the Jewish storytellers to their being resident in towns, where the dog is less useful. Part of his paper deals with the sources of Jewish art, a subject admirably illustrated by E. N. Adler of London near the commencement of the volume. Other contributions connected with folklore are by M. A. Canney of London on Boats and Ships in temples and tombs, W. R. Halliday, also of London, on a Modern Greek Folk-tale from Samos, B. Heller of Budapest, who furnishes *Beiträge zur Stoff- und Quellen geschichte des Ma'assebuchs*, and M. Higger of New York on "the Formation of the Child". Perhaps we may put in this category Mrs. Drower's paper on the Kaprana, "a small oblong roll of about 3½ inches in length, made with the sacramental wafers in the Nestorian Qurbana," Dr. Oesterley's on Persian Angelology and Demonology, and I. Eitrem's (of Oslo) on "Pulling by the hair".

Cuneiform and kindred research are represented by Professor Langdon's (of Oxford) edition with translation of "a Nabu Liturgy", Dr. Theodor Gaster (son of the Haham) who proposes decipherment and interpretation of Ras Shamra tablets which are in a non-Semitic idiom, and Raffæle Pettazzoni of Rome, who writes on Confession of Sins in Hittite religion. Living idioms find treatment in Mrs. Hasluck's (of London) edition of an Albanian ballad on the assassination of Murad I in 1389, Mr. N. B. Jopson's (of London) study of Literary Style in Judæo-Spanish, Max Weinreich's (of Wilno) "Form versus Psychic Function in Yiddish", and Bruno Schindler's (of London) "Old Chinese Harvest Festival Songs", in which he finds dramatic structure. Prof. F. Kaufmann of Berlin and Dr. Erich Langstadt of Cambridge contribute philosophical

essays. The former writes on *Kunst und Religion*: if his sentence *So beziehen wir das Faktum der Kunst auf das Faktum der jüdischen Religion* means that he brings the "fact" (actual existence ?) of art into connection with that of Judaism, this must be regarded as a hard saying. The latter explains the import of the term Democracy as applied by Philo to the ideal state, and traces his theories to various sources, including the Essenes and the Platonic *Menexenus*. Professor G. Scholem of Jerusalem describes for the first time a pantheistic treatise by David ben Abraham ha-Labhan, which he locates between 1280 and 1300. It contains some remarkable speculations, in particular one on the import of sin. Professor E. O. James of Leeds in a paper called "Ethical Monotheism" deals with the origin and development of monotheism and polytheism.

A *Festschrift* dedicated to Dr. Gaster would be incomplete without some Gypsy Lore. This is supplied by Dora E. Yates of Liverpool, who contributes a Romani tale with translation.

A. 792.

D. S. MARGOLIOUTH.

HISTOIRE DES CROISADES ET DU ROYAUME FRANC DE JÉRUSALEM, III. La Monarchie Musulmane et l'Anarchie Franque. By RENÉ GROUSSET. 9 × 5 $\frac{3}{4}$, pp. xxxiv + 874, maps 14. Paris : Librairie Plon, 1936.

This is the third volume of a very thorough monograph on the crusades and the Frankish Kingdom of Jerusalem by the illustrious French Orientalist, who has distinguished himself with his comprehensive general works on Far Eastern civilizations. It was not inopportune to write a modern history of the crusades, the effects of which have been lasting up to our days. The titles of the three volumes of Grousset's work very ingeniously characterize the subsequent phases of this great struggle of Christianity with Islam: the first being Muslim anarchy and Frankish monarchy, the second Frankish monarchy and Muslim monarchy, and the third Muslim monarchy and Frankish anarchy.

The third volume opens with a long and succinct historical survey (32 pages) of the whole period of the crusades, which the

author fits into a general frame of the counteractions of East and West on each other. He ascribes the success of the first crusades to "Muslim anarchy and Frankish monarchy", whilst the failure of the last crusades was due to "Muslim monarchy and Frankish anarchy". This introductory study is very much worth being read by the general reader; it treats of the significance of the crusades and their place in general history.

Then there follows the history of the crusades from the re-establishment of the Frankish rule in the Levant and the third crusade till the end of the period, i.e. the evacuation of Syria by the Franks. The volume relates the history of the years 1188 to 1291 in twenty-two chapters. We see all the leading personalities of the age pass by, Western and Eastern alike; all the political manœuvres and military operations are detailed and accounted for by the author who, notwithstanding the exhaustively great material as he has at hand, is far from being tedious: on the contrary, his narrative is interesting to the end, and abounds in vivid and fascinating descriptions. Every student of general history can draw a great deal from Grousset's work, because its chief characteristic is strict impartiality. Taking advantage of all the important authorities on the period, not only European but Oriental, he was enabled to write his work *sine ira et studio*, from both Christian and Muslim aspects.

For the Orientalist, his work is especially important because of his constant references to all the great Muslim authorities such as Badraddin ibn Shaddād, Ḥimādaddin, Kamāladdin, al-Maqrizī, Abul-Fidā, Jamāladdin ibn Wāsil, Bar Hebraeus, an-Nasawī, Badraddin al-‘Aynī, Rashīdaddin, Ibn Furāt, Muhiaddin, and Wassaf—to quote these names in the order the author refers to them. To complete the information gathered from Muslim, mostly Arabic, sources, he also quotes Cyprian and Armenian authorities. With the Oriental sources he was able to check the narratives of the European chroniclers which were, of course, all made use of by him.

Thus Grousset's book is a suitable work of reference for

comparative historical studies. For this purpose he has also inserted into the text maps showing the battle-fields of the crusades and the comparative extension of Frank and Muslim rules in the Levant during the period concerned. On the separate tables at the end of the volume the genealogies of the Houses of Jerusalem, Antiochia, Gibelet, and the Ayyübids are detailed.

The book is a very valuable addition to general historical and Orientalist literature alike.

NOTES OF THE QUARTER

Lantern Slides of Assyriological and Babylonian Subjects

PINCHES BEQUEST

The late Dr. T. G. Pinches, a Member of the Society for upwards of fifty years, left directions that a collection of his Assyriological and Babylonian Lantern Slides should be held in trust by the Royal Asiatic Society for the use of Students.

Dr. Pinches bequeathed them in the hope that they may promote an interest in such subjects among Students in this country. The Society has accepted the trust and will hold the slides available for the use of bona fide Students, Lecturers, or Educational Institutions such as the Victoria Institute. There are nearly 400 slides, which have been catalogued by Professor S. H. Langdon. Requests from Orientalists should be sent to the Secretary, with necessary references for the consideration of the Council.

Dr. Pinches also left nine simple Babylonian Seals, together with the copy, transcription, and translation of each, prepared by himself, for the same purpose. These are available for loan under the same conditions as the slides.

OBITUARY NOTICES

Professor E. J. Rapson

Edward James Rapson was born at Leicester on 12th May, 1861. His father,¹ Edward Rapson, was a schoolmaster, who subsequently took Holy Orders and, after holding various curacies, was appointed Vicar of West Bradley in Somerset. In 1879 the younger Edward went from Hereford Cathedral School to St. John's College, Cambridge, as a Pensioner, becoming later successively a Sizar and a Foundation Scholar. Placed in the First Class of the Classical Tripos in 1883, he turned to Indian studies. The enthusiasm and energy of John Peile, Master of Christ's College, had created the Chair of Sanskrit. Peile's unselfish refusal to be himself a candidate for the Chair had permitted the election of that great master, Edward Cowell, to be the first Professor of Sanskrit in Cambridge. It was under him that young Rapson, to be himself the third in succession, read for the Indian Languages Tripos, gaining the Brotherton Prize for Sanskrit in 1884 and being placed in the First Class of the Tripos in 1885. In the same year he was elected to the Hutchinson Studentship, and in 1886 he won the Le Bas Prize with an essay on "The Struggle between England and France for supremacy in India". His attention was thus early drawn to that side of Indian studies with which his name will always be especially associated, History. In 1887 he became a Fellow of his College.

In the same year, after serving for a short while as Assistant Librarian to the Indian Institute at Oxford, he entered the British Museum as an Assistant in the Department of Coins.

Although he was to become a most competent scholar and teacher of Sanskrit, with an exceedingly accurate, if not very wide knowledge, of its immense literature, Rapson now found in his new work the interests that were to be predominant throughout his life. For coins, which play so great a part in

¹ Several of the details given here I owe to Dr. L. D. Barnett's fine memoir in the *Proceedings of the British Academy*, vol. xxiii.

recovering the ancient history of India, led him to history; while his mastery of the Kharoṣṭhī alphabet pointed him out as the one to whom the task of editing the documents brought back by Dr. (now Sir) Aurel Stein from Chinese Turkestan in 1901 should be entrusted.

In 1906 the death of Bendall, Cowell's successor, again left the Chair of Sanskrit vacant at Cambridge, and Rapson was elected into it, and shortly afterwards once again into a Fellowship at his own College.

There followed thirty years of quiet and fruitful research and of constant and faithful teaching. Both were marked by a meticulous thoroughness and accuracy. Everything was prepared with the most exacting completeness. He was never hurried, never lost patience. He was not, I think, an inspired teacher; but his pupils learnt the great lesson from him of accurate scholarship that never rested till every fact was verified. Though students of Sanskrit were not numerous, his work of teaching was never light, and was often onerous. At Cambridge the professor of an Oriental language has the whole teaching of his subject in his own hands, and must himself give all the instruction required by his pupil from the most elementary to the most advanced stages. At times this used to mean for Rapson eighteen or twenty hours of teaching in the week. Yet no pupil was ever put off; and the schoolboy, as the present writer was when first invited to attend the Sanskrit classes in Mortimer Road, was welcomed equally with the most advanced and promising student.

Of the works belonging to this period there came first his *Ancient India from the Earliest Times to the First Century A.D.* Then, when the *Cambridge History of India* was planned by the University Press, Rapson was the obvious editor for its first two volumes, to which Sir Richard Burn, who succeeds to his task, will refer below. The Great War, which delayed the publication of the History, found Rapson, although by now passed his eleventh lustrum, ready to take his part, and at least one of his pupils returned on leave from the

front to report to his old professor as Assistant Adjutant at the Headquarters of the 2nd Cambridgeshire Regiment.

He was, however, still able to give time to his professorial work, and in 1920 the Clarendon Press published the first volume of *Kharoṣṭī Inscriptions discovered by Sir M. A. Stein in Chinese Turkestan*, which he had edited in collaboration with A. M. Boyer and E. Senart. The same editors produced Volume II in 1927, and Volume III followed in 1929, edited by Rapson and his pupil Professor P. Noble.

These Inscriptions or Documents (for they are mostly written on wooden tablets) are not only of the highest importance for the history of this part of Central Asia, but they present a picture of contemporary life in the third century A.D., which has scarcely any parallel in Indian documents. On the linguistic side their interest is supreme; for some of them are couched in a form of Middle Indo-Aryan brought into Central Asia probably under the Kuṣāṇa emperors. This language, strongly conservative like other dialects of the north-west of India on the phonetic side,¹ displays a far-reaching development of the final syllable and a simplification and normalization of grammatical forms, of which the more literary dialects of Prākrit, despite their greater phonetic evolution, give us little indication. They are thus a document of the highest importance in the long history of the development of Vedic Sanskrit into the modern languages of to-day.

Although Rapson did not concern himself greatly with their linguistic implications, the careful accuracy with which he transliterated the documents, the splendid appendices of the third volume, and the complete index of words, made of this first edition a mine of accurate information and a firm foundation on which other scholars have already built and will continue to build for many years to come. It was an especial pleasure to Rapson that he saw before his death the publication

¹ For example it retained unassimilated groups of consonants such as *rt*, assimilated 500 years earlier even in the Shāhbāzgarhī and Mānsehrā Inscriptions of Aśoka and remaining to the present day only in one small enclave of the Hindu Kush in the Khowar of Chitral.

of a work by another pupil of his, Dr. T. Burrow, on the phonology and grammar of this language. It is a proof of the growing interest and importance of the studies based on Rapson's *editio princeps* that whereas in the *Volume of Indian Studies*, offered to him on his seventieth birthday at the School of Oriental Studies by scholars from all over the world, there was only one article devoted to the Documents, in a similar volume of the *Bulletin of the School of Oriental Studies*, offered five years later to Sir George Grierson, six articles dealt with one or other aspect of the Documents.

In 1902 he had married Ellen Daisy Allen, and though within a few years of this date to the time of her death in 1921 Mrs. Rapson was an invalid constantly enduring pain and confined to the couch in their drawing-room, many generations of undergraduates remember with warm gratitude the hospitality she and her husband used to extend to them in their house in Mortimer Road.

In 1936, hoping that he would gain the leisure necessary to complete the work of editing Volume II of the *Cambridge History of India*, he resigned the Chair he had occupied for thirty years. A year later, on the 3rd of October, 1937, he died suddenly of a cerebral haemorrhage. It was a singularly happy end. He left pupils carrying on the tradition of his own work; he saw the Chair he had occupied so long, worthily filled; he himself was engaged to the very last in work that had always held for him the most intense interest; and death, when it came, came suddenly and painlessly within the precincts of his own loved College.

R. L. TURNER.

In the field of numismatics Rapson's work is distinguished by accuracy and completeness. His first book on the subject is "Indian Coins" in Bühler's *Grundriss* (1897) which summarizes what was then known of Indian numismatics for the period before the Muslim conquest of northern India. It

is an admirable guide to the subject and is specially valuable for its bibliographical references.

In 1908, after he had left the Museum, was published his *Catalogue of the Coins of the Andhra Dynasty, the Western Satraps, the Traikūṭaka Dynasty and the "Bodhi" Dynasty*, in the British Museum. A few years earlier (*ZDMG.*, 1902, 1093) Vincent Smith had grappled with the difficult problems of the Andhra Dynasty and coinage, and in this catalogue Rapson amplified the story. Rapson himself had previously published studies of the coins of the Western Satraps, editing a paper on the subject by Bhagavanlal Indraji in *JRAS.*, 1890, and making a further original contribution in 1899. The catalogue is an excellent piece of work which still remains the standard account of the dynasty.

His three chapters in *Cambridge History of India*, vol. i, on (xxi) Indian Native States after the period of the Maurya Dynasty, (xxii) on the successors of Alexander the Great, and (xxiii) on the Scythian and Parthian invaders, are models of the treatment of numismatic material for history where written records are scanty or fail completely.

In addition to these finished studies he published a number of interesting papers in the *Numismatic Chronicle*, in this *Journal*, and in *Corolla Numismatica*, on the Gupta coins in the Bodleian and on rare or inedited coins and seals in the British Museum and in private collections.

While editing the Cambridge History Rapson published a little book on *Ancient India* (1914) which is an excellent primer on the subject, with valuable notes on topography. His work as editor of vol. i, which appeared in 1922, is marked by all the special qualities which distinguished him. The second volume on Medieval India was planned by him and much work had been done by him on the chapters written by other contributors. His untimely death before he had completed all the chapters which he intended to write himself has caused a great loss to the work.

R. BURN.

Father Eric Norman Bromley Burrows, S.J.

It is with a grave feeling of loss that we mourn the death of a distinguished Assyriologist, Father Burrows, in a motor accident on 23rd June.

He was born in 1882 and educated at Felsted (where he was in Gepp's House from May, 1897 to July, 1902), and Keble College, Oxford (1902–1905), becoming a Catholic in 1904 after taking his B.A. degree, and entering the Society of Jesus in 1905. His peculiar flair for learning Oriental languages was to make him one of the best Assyriologists in England, and in this pursuit he betook himself to the Near East (in 1912) to the French University at Beyrut, where he could study these tongues both living and dead. Subsequently (in 1917), after being ordained at St. Benno's in Wales, he was sent to the Biblical Institute at Rome, where he was able to devote himself still more to what was to be his life-work.

He was one of those fortunate Orientalists who make opportunities to study their science in the field as well as at home. In 1924–5 he was a member of the Weld and Field Expedition to Kish, and in 1926–30 of the British Museum and University of Pennsylvania Expedition to Ur of the Chaldees under Sir Leonard Woolley. To the results of this latter expedition he contributed a large volume, his work being on the archaic texts, and herein he presents an admirable series of neatly copied tablets with a table of 420 early signs. He was also a contributor to the *Journal* of this Society.

Personally he was a most charming and most modest man, and one has only to read his work on the archaic Ur texts to realize what a scholar has been lost by his death. Had he been spared, there is little doubt that, having now settled himself in the saddle, he would have gone on producing similar excellent works for another decade at least. Assyriology has suffered a grave loss.
